What to write on the booklet

Index of screens by menu

Quick Reference

Front matter

What Moonproject is

Moonproject keeps the shop's orders, production, money, payroll and books together. It runs on the shop PC. Staff use a browser on a joined PC, phone or tablet. The shop PC must be on. Ordinary shop work on the local network does not need the internet; outside services such as email and off-site copying do.

This manual is for owners, accountants, encoders and workers. It follows the app on main as checked on 6 October 2026. All screenshot people and transactions are made-up practice data. The screenshots are reused from the owner guides; some show an earlier layout. Follow the current button names and steps in the text. No new screen is pictured.

How to read this book

Read Quick start before your first day. Use Routines at opening and closing time. The module chapters keep the original guide numbers, so "guide 37" always means Job Orders, Release Slips and Invoices. The contents and guide references are clickable. Use the PDF reader's search for a screen name or message. The screen index is grouped by the menu where you find it; a topic may be explained in a different chapter.

Bold words name buttons, fields, menus or messages. "Click" also means tap on a phone. A numbered step is something you do. Read "Before you start" first and "What the system does" before confirming. A screen may hide a button if your login lacks permission or the record is in the wrong state. Ask the owner when access is missing.

Who sees what

- **Owner:** shop oversight, users and roles, safety and recovery, plus the business work their permissions allow. Owners handle first setup and emergency decisions.
- **Accountant:** books, tax, payroll, balances, corrections and month-end work. The accountant decides the accounting treatment and checks the paperwork.
- **Encoder:** the accountant's access by default, except users and roles, backups and restores, and shop payment settings. Access does not replace the accountant's review of tax and accounting decisions.
- **Production:** production board, pieces, rates and the production reports allowed to that login. Workers record the job, step, worker and pieces carefully; those entries feed pay.
- **TV:** the wall display of production work. It has no access to the working production board or production entries. It is for viewing, not recording.

The owner can change permissions. Actual screens follow the login's permissions, not just its role name. Use individual logins so the history shows who did the work. Do not share passwords.

Menu map

- **Sales:** customers, job orders, releases, invoice records, collections, quick sales, quotations, credits, checks, customer emails, POS, website shop, online orders and support inbox.

- **Money:** cash places, cash book, transfers, counts, checks on hand, reconciliation, assets, loans, owners and dividends.
- **Reports:** books, statements, customer and supplier balances, payroll and production reports, exceptions and the owners' pack.
- **Purchases & Expenses:** suppliers, supplies, purchase orders, receiving, bills, payments, expense vouchers and inventory counts.
- **People & Payroll:** employees, attendance, holidays, payroll, advances, leave, government loans, remittances and agency files.
- **Production:** the production board, TV board, entries, piece rates and sizer sets.
- **Accounting & Tax:** journals, chart of accounts, settings, tax registers, booklets, returns, VAT, go-live decisions and month-end.
- **Admin:** users, safety, backups, import, opening balances, company print details and practice shop.
- **Overview:** Home, Notifications and Calendar. Start at **Needs attention** on Home.

On a phone tap **Menu**. Click a group heading to open its items. Use **+ New** and **Search new documents** to find a form. A list's button says **+ New** followed by the document name.

Words used on every form

- **Document:** a numbered business event, such as a job order, collection or payroll run.
- **Record:** review the confirmation, then save the event. It receives a number and, when money is involved, updates the books.
- **Draft:** unfinished work. **Save draft** keeps it without a number or an entry in the books. Open it again to finish.
- **Cancel:** keep the original and reverse its effect, with a reason. It is not deletion. Read any message about later documents that must be cancelled first.
- **Edit:** for a recorded document, cancel and reissue under a new number. Nothing changes until you record the replacement. Keep the old paper copies marked as cancelled.
- **Cash place:** a cash box, bank account, checks account or e-wallet. Pick the place where money actually went or came from.

Read **What this did** on a recorded document. **Behind the scenes** shows the accounting entries when your login may see them. A warning asks you to check; an error must be fixed before recording. When totals change, review them again.

Quick start

First-day route

1. Install on the shop PC with guide 14 below. Create the FIRST owner there, starting at **http://localhost:8080/**. Another device is refused.
2. Join each device with guide 10. Check the certificate code against the shop PC before trusting it.
3. Set the company print details and test printers with guide 44. Use real company details in the live shop; practice screenshots are examples only.
4. The owner adds staff logins with guide 35. Set up backups and do a restore drill with guides 11 and 12 before live work.
5. Rehearse in **Practice shop** (guide 20). Agree the go-live decisions (guide 48), opening balances (guide 17) and switch-over (guide 39) before recording real business.

Guide 14. Installing Moonproject

What it is for: Install Moonproject on the shop's server PC.

Before you start: You will need to download the newest setup file from the internet.

Steps

1. On GitHub, open **Actions**, then **Windows installer**. Pick the newest run on the **main** branch that has a green tick.
2. Under **Artifacts**, download **Moonproject-Setup-0.1.<number>**. It comes as a zip file: unzip it.
3. Run the Moonproject-Setup.exe file inside.
4. If Windows SmartScreen warns you, click "More info" and then "Run anyway".
5. When Windows asks if you want to allow this app to make changes to your device, click **Yes**. You need a Windows administrator account.
6. The installer has a time zone box. Make sure it is checked.
7. Leave **Open the "Join this PC" page** ticked and click **Finish**. The program now runs by itself as a Windows service when the PC starts.
8. The browser opens the page. If it does not open, go to **http://localhost:8080/**.
9. You will see the "Join this PC" page. This shows the shop certificate code.
10. On this shop PC, follow guide 10 to trust its certificate, then click **Open Moonproject**. Create the FIRST owner before joining other devices.
11. On **Create the first owner**, fill **Your name**, **Username**, **Passphrase** and **Type the passphrase again**. Use at least 15 characters, without the username. Click **Create owner and sign in**.
12. Join each other device using guide 10. The owner adds each staff login under **Admin > Users** (guide 35).

Before putting the website shop on the internet

1. Create the owner account in the browser **on the shop PC** and finish setup privately.
2. Turn on automatic backups, keep an off-machine copy, and complete a restore drill (guides 11 and 12).
3. Ask the installer to put trusted HTTPS in front of the public shop. Check that its certificate is trusted by an outside browser.
4. Give the public shop pages their own address. Ask the installer to allow only the shop pages and their shop/support requests there, keeping accounting, staff sign-in, setup, device joining and practice pages on the LAN or VPN. Check from outside that only the approved public pages are reachable before opening the shop to customers.

What the system does for you

It installs the system and runs it in the background. It keeps all your records in C:\ProgramData\Moonproject. Inside are the data, backups, and logs folders.

Common mistakes and how to fix them

- **Mistake:** You see "Create the owner account on the shop PC itself, not from another device. Open Moonproject in the browser on the shop PC."
- **Fix:** Go to the shop PC itself. In its browser start at **<http://localhost:8080/>**, trust the shop certificate, click **Open Moonproject**, and create the first owner there. A phone or another PC is refused, even on the same network.
- **Mistake:** You want to update or uninstall, but worry about losing data.
- **Fix:** Updating means running a newer Moonproject-Setup.exe. The data is kept. Uninstalling also keeps the data safe.

Guide 10. Joining a phone or PC

What it is for: Add a phone, tablet or PC to the shop's system. This lets the device safely open Moonproject over a secure connection.

Before you start: Do this once on each new device in the shop. You need the address of the server PC (ask the owner who set up the server PC for its address).

Steps

1. On the new device, open a browser.
2. Go to `http://<the server PC's address>/`. If that does not open, try `http://<the server PC's address>:8080/`.
3. Click **Download the certificate**.
4. Check the code shown on the screen. On the server PC, open the address the page tells you (for example, **http://localhost/** or **http://localhost:8080/**) and check that it shows the same code. On a PC that has already joined, you can also open **Admin > Shop certificate** to see the code. If it does not match, stop and tell an owner.
5. Install the certificate:
 - **Windows PC:** open the downloaded file, choose **Install Certificate**, then **Current User**, then **Place all certificates in the following store, Browse, Trusted Root Certification Authorities**. Finish and answer **Yes**. Close the browser and open it again.
 - **Android:** open Settings, search for **CA certificate** (under Security, then Encryption and credentials, then Install a certificate), choose **Install anyway** and pick the downloaded file.
 - **iPhone or iPad:** open the page in Safari and download the file. Then in Settings tap **Profile Downloaded** and **Install**. Finally go to Settings, General, About, Certificate Trust Settings and turn on **Moonproject local CA**.
 - **Mac:** open the downloaded file, then in Keychain Access open the certificate, expand **Trust** and choose **Always Trust**.
6. Back on the page, click **Open Moonproject**.
7. Save that address as a bookmark or on the home screen.

What the system does for you

It protects your business data. Adding the certificate ensures the device is talking to your real server PC and not a fake one, keeping the connection safe and private.

Common mistakes and how to fix them

- **Mistake:** The browser still warns that the connection is not private.
- **Fix:** The certificate is not installed yet, or on iPhone the trust switch is off. Check the installation steps again.
- **Mistake:** The codes differ when checking the server.

- **Fix:** Stop and tell an owner immediately.
- **Mistake:** The address changed.
- **Fix:** The shop certificate stays the same, so you do not need to install it again. Just open `https://<new address>/` and save the new bookmark.

Guide 44. Company Print Details and Printer Test Pack

What it is for: Set the company's registered name, TIN, and address that appear on every print. Also, test the shop printers before the switch-over.

Before you start: You need the exact registered name, TIN, and address of the business. You also need your password to save the changes. Ensure your printers are on.

Steps

To set the company print details:

1. On the **Admin** menu, click **Company print details**.

Company print details

These details appear on every printout. Check them against the company's registration before saving.

Company profile

Registered name *
Practice Garments (Fictional) Corp.

Trade name *
Practice Garments

TIN *
000-000-000-000

Registered address *
1 Practice Lane, Sample City, Philippines

☒ VAT registered

Your password to confirm this change *

Save details

Loose-leaf books of accounts

The Company print details screen · Owner-guide screenshot

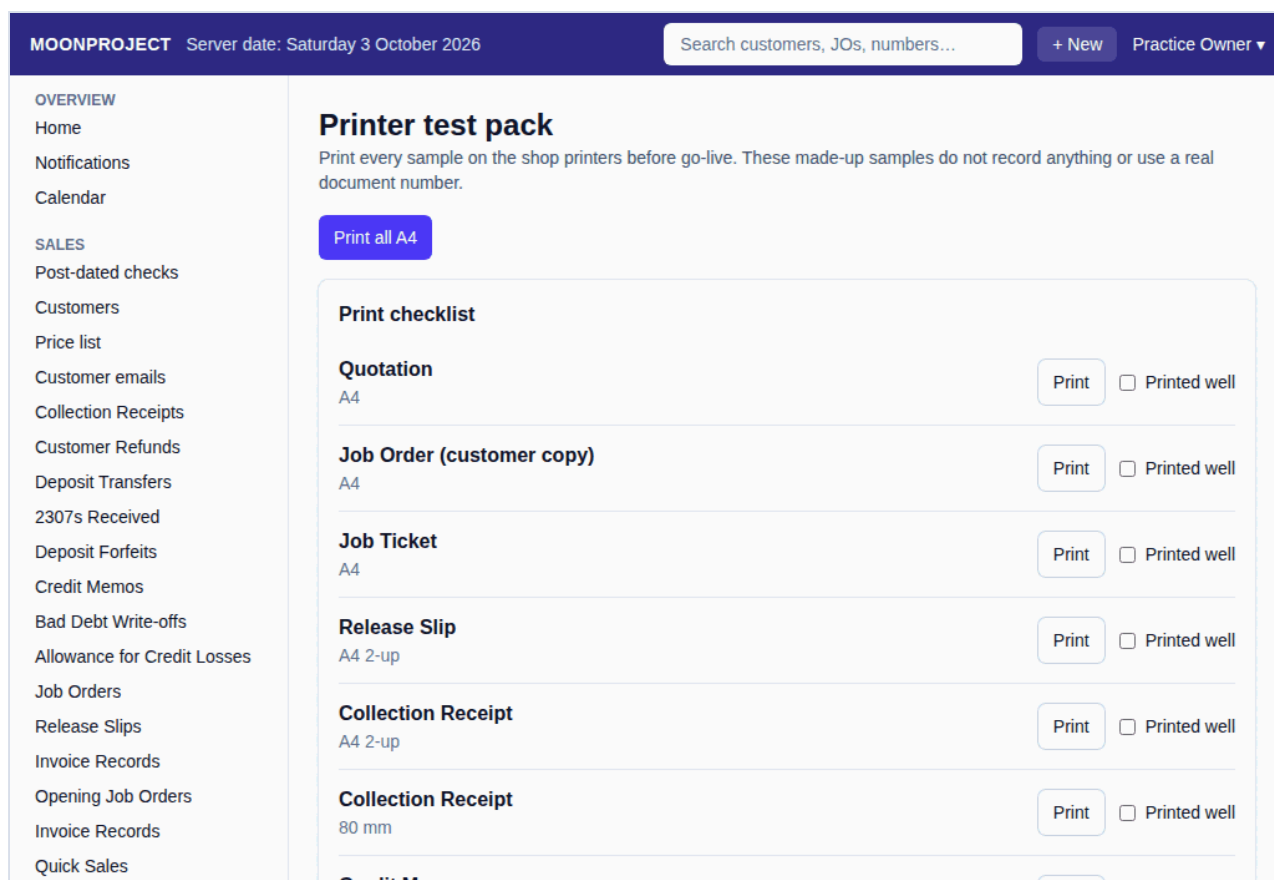

2. Type the **Registered name**, **Trade name**, **TIN**, and **Registered address**.
3. Check the **VAT registered** box if the business is VAT registered.
4. Type **Your password to confirm this change**.
5. Click **Save details**. All four boxes must be filled in.

To choose the paper for the loose-leaf books:

1. On the same screen, under **Loose-leaf books of accounts**, pick the **Paper: A4 portrait** or **Long bond paper (8.5 × 13 in)**.
2. Type **Your password to confirm this change** and click **Save paper**.

To test the printers:

1. On the **Admin** menu, click **Printer test pack**.

The Printer test pack screen · Owner-guide screenshot

2. To test the A4 pages, click **Print all A4**. Each sample prints with a "TEST PRINT, NOT A REAL DOCUMENT" stamp.
3. For other pages, look under the **Print checklist**. Click **Print** next to each form to send it to the printer.
4. Check the printed pages. If they look good, check the **Printed well** box next to each one.

What the system does for you

The system puts your company print details on every document you print. On the quotation, job order, release slip, purchase order, collection receipt, credit memo and payment voucher, it prints the line "THIS DOCUMENT IS NOT VALID FOR CLAIM OF INPUT TAX."

Every time you print a document, the system counts it. The footer reads "Original print · Copy 1" the first time, then "REPRINT no. 1 · Copy 2" and so on.

The printer test pack gives you made-up samples printed with your saved company print details, so set those first (a made-up company is shown until you do). The BIR books' samples use the paper you picked for the loose-leaf books. You can use this to check how each form prints on each printer before the switch-over. The samples do not record anything or use a real document number. Any forms listed under **Not built** are not built.

Common mistakes and how to fix them

- **Mistake:** You typed the wrong TIN or address.
- **Fix:** Go back to the **Company print details** screen. Type the correct details, type your password, and click **Save details**. You can view old details under **Earlier versions**.
- **Mistake:** A printed page looks cut off or wrong.
- **Fix:** Uncheck the **Printed well** box. The **Printed well** ticks are kept in this browser only.

Sign in and change your password

What it is for: Use your own login and replace the temporary password the owner gave you.

Before you start: Use the joined device's saved Moonproject address. Get your username and temporary password privately from the owner.

Steps:

1. Type **Username** and **Password**, then click **Sign in**.
2. At **Change password**, type **Temporary password**, **New passphrase** and **Type the new passphrase again**.
3. Use at least 15 characters, such as several words, without your username. Do not use a password from a screenshot or example.
4. Click **Save new passphrase**.
5. To change it later, open your name menu and choose **Change password**. Use **Current password** instead of the temporary one.
6. When finished, open your name menu and click **Sign out**.

What the system does: It requires a new passphrase on first staff sign-in. Changing the password signs out your other devices.

Common mistakes: "Wrong username or password." means check what you typed. If forgotten, ask the owner to use **Reset password** (guide 35). "The two passphrases are not the same." means retype both new boxes alike.

Routines

Every day

1. Keep the shop PC on. Sign in, check the server date and read **Needs attention** on Home (guide 43).
2. The owner checks **System health** and the last backup (guides 25 and 11). Check **Nightly checks** findings with guide 56.
3. Encoders record orders, releases, invoice records, collections, purchases and expenses from the papers. Use the PRINTED DATE on the four forms that ask for it. Attach supporting papers (guide 58).
4. Workers check **Production board**, record pieces against the right worker and step, and complete finished steps (guide 41). Record attendance (guide 42).
5. Check **Online orders** against the actual bank receipts before confirming payments. Follow up customers and due checks (guides 26 and 55).
6. At closing, finish or save drafts. Check the cash book and count each cash box (guides 8 and 7). Explain differences; do not guess an adjustment to make them disappear.

Every week

1. Review overdue job orders, customer balances, unpaid supplier bills, late loans and sizer sets (guides 26, 38, 36 and 45).
2. Before payroll, check attendance, pieces, rates and advances. Record the run and release only the pay actually given (guides 6, 22 and 42).
3. The owner makes the USB backup copy and swaps Drive A and Drive B; keep the copy away from the shop (guide 11).
4. Check failed customer emails, old drafts and notifications (guides 47 and 43). Review cash and collection totals with the accountant.

Every month: close the month

1. Finish the month's source papers, releases awaiting invoices, payrolls and corrections. Check the **Exceptions** report (guide 38).
2. Count cash and inventory; reconcile each bank statement (guides 7, 15 and 32).
3. Run depreciation, oldest missing month first (guide 51). Review loans and unpaid balances (guides 36 and 38).
4. Check payroll deductions, government loans and remittances. Download agency files, validate them and pay through the official channels (guides 21, 24 and 34).
5. Check **0619-E (monthly EWT)** for the first two months of a quarter, or **1601-EQ (quarterly EWT)** at quarter end. Record actual BIR payments (guide 18).
6. Open **Month-end checklist** and follow each link. The accountant reviews the evidence, writes the note and signs off (guide 33). Printed-date entries cannot be newly dated in that signed-off month.

7. Print the monthly owners' pack, compare statements and discuss differences (guides 63, 54 and 49).

Every quarter

1. Check **Tax calendar** for the applicable deadlines; have the accountant confirm current filing requirements.
2. Reconcile sales and purchases registers, classify missing VAT details and mark actual 2307 certificates received. Review **VAT this quarter** and **2550Q worksheet**, then record the VAT close in quarter order (guide 29).
3. Review **1601-EQ (quarterly EWT)** and the earlier monthly EWT payments. Issue supplier 2307s (guide 53).
4. File through the official BIR channel, keep its confirmation, record the filing and actual payment (guide 18 and the Accounting and Tax chapter). A worksheet or download is not a filed return.
5. Review applicable quarterly income tax on **1702Q worksheet**. The accountant checks adjustments and credits before filing.
6. The owner runs a restore drill with guide 12. Use **Run drill** for a test.

Every year

1. Record all pay and applicable pay from before Moonproject or a previous employer. Review 13th-month pay and release it by the required date (guide 23).
2. Do the December year-end tax adjustment, check 2316 and the 1604-C alphalist (guide 28). Review leave balances (guide 52).
3. Complete the final month's counts, depreciation, reconciliations and sign-off. Review allowance and uncollected VAT if used (guides 61 and 62).
4. The accountant checks **1702-RT worksheet (annual)**, annual EWT and other applicable returns, confirms adjustments, files externally and records evidence.
5. Keep the annual reports, filed confirmations, booklets and yearly backups. Keep the old recovery keys for as long as you keep backups locked with them (guide 11).

Sales

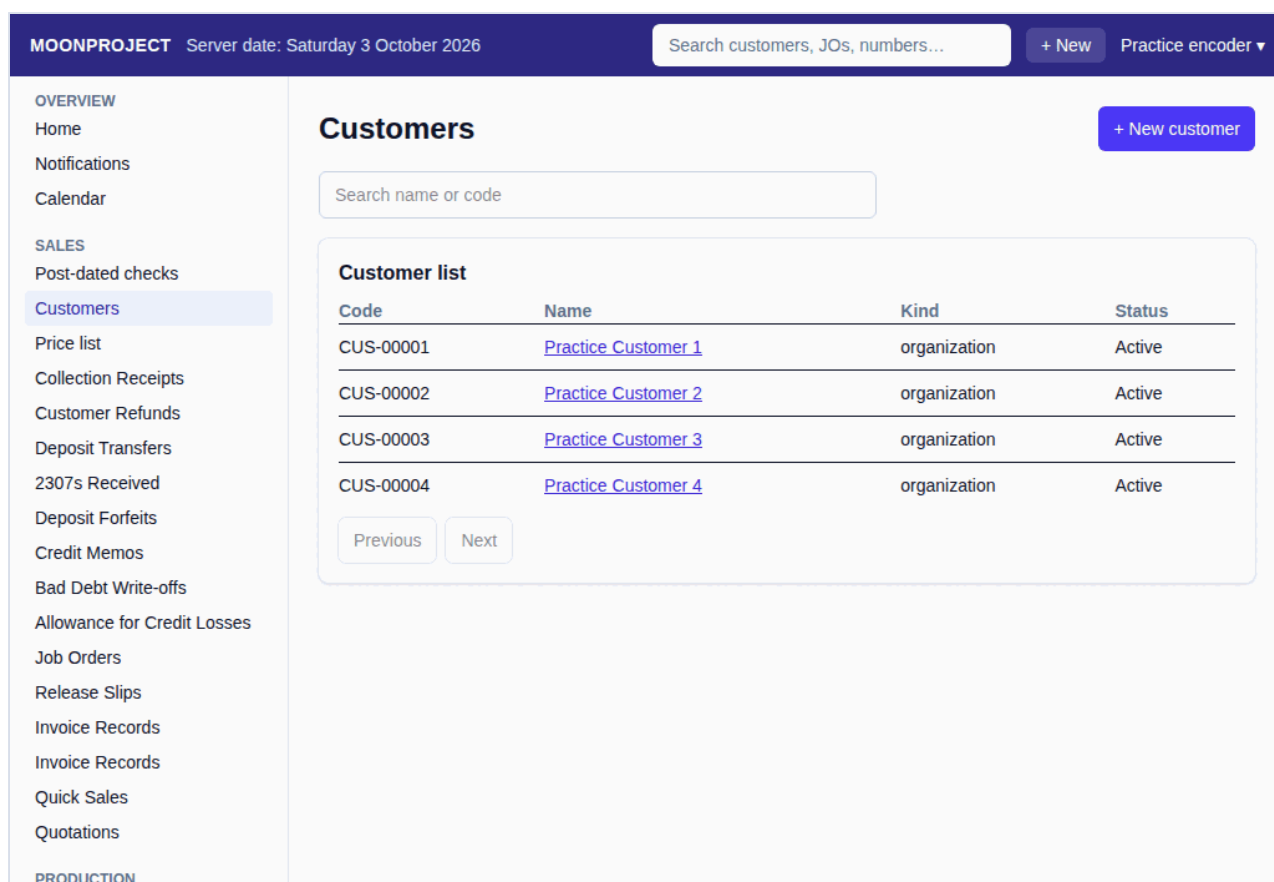

Guide 01. New Customer and Measurements

What it is for: Add a new customer, their departments or groups, and the people (wearers) who will be measured, then type their exact measurements (or revise them).

Before you start: Know the customer's name. If it is a large group like a school, it helps to know their department names.

Steps

1. On the **Sales** menu, click **Customers**.

The screenshot shows the Moonproject interface. The top header includes the Moonproject logo, server date (Saturday 3 October 2026), a search bar, and buttons for '+ New' and 'Practice encoder'. The left sidebar lists navigation options under 'OVERVIEW', 'SALES', and 'PRODUCTION'. The 'Customers' option is highlighted. The main content area is titled 'Customers' and includes a search bar, a '+ New customer' button, and a table with the following data:

Code	Name	Kind	Status
CUS-00001	Practice Customer 1	organization	Active
CUS-00002	Practice Customer 2	organization	Active
CUS-00003	Practice Customer 3	organization	Active
CUS-00004	Practice Customer 4	organization	Active

Below the table are 'Previous' and 'Next' buttons.

The Customers list, with the + New customer button · Owner-guide screenshot

2. Click **+ New customer**.
3. Type the customer's details and click **Save**.
4. To add people, click the **Wearers** section.

The screenshot shows a web interface for managing customer data. On the left is a sidebar with a list of items: Deposit Forfeits, Credit Memos, Bad Debt Write-offs, Allowance for Credit Losses, Job Orders, Release Slips, Invoice Records, Quick Sales, Quotations, PRODUCTION (Production board, Piece rates, Sizer sets, Production Entries), PURCHASES & EXPENSES (Suppliers, Supplies, Payables by supplier, Supplier Bills, Supplier Payments, Supplier Advances, Supplier Advance Returns, Expense Vouchers). The main area is titled 'Practice Customer 1 - CUS-00001' and includes buttons for 'Previous' and 'Next'. Below the title, it shows 'organization · Active · TIN 000-000-011-000' and 'Registered name: Practice Customer 1 (Fictional)' with 'Edit customer' and 'Close' buttons. The 'Groups' section has a text input 'Team or department' and an 'Add' button. The 'Wearers' section has a text input 'Practice Wearer 1', a 'Wearer name' input, a 'No group' dropdown, and an 'Add wearer' button.

A customer's page with the Groups and Wearers sections · Owner-guide screenshot

5. If the wearer belongs to a team or department, you can type it and click **Add** (or pick an existing one).
6. Type the wearer's name and click **Add wearer**.
7. To enter their measurements, click their name in the Wearers list.
8. Under **Entry type**, choose **Measurements**, choose the **Unit**, and type the measurements, describe what changed if this is a revision, and click **Save revision**.

What the system does for you

It keeps a complete history of every measurement revision. When you make a job order later, you can pull in this customer and these specific people, and the system knows exactly which measurements to use.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong measurements for a wearer.
- **Fix:** Do not try to delete the wearer (nothing can be deleted). Just click on their name again, enter the correct measurements, and click **Save revision**. The system keeps the old ones on file but will use the new ones.

Guide 02. Job Order and Downpayment

What it is for: Record a new job order, add the items to be made, assign wearers if applicable, and log the initial downpayment.

Before you start: Make sure the customer (and any wearers) are already in the system. Know the items to be made and the downpayment amount received.

Steps

1. On the **Sales** menu, click **Job Orders**.
2. Click **+ New Job Order**.
3. Pick the customer.
4. Add lines for the items the customer wants to order.

So far
Total **P5,400.00**
Downpayment asked P2,700.00
Balance due **P5,400.00**
This will record a job order for Practice Customer 1: 12 pieces, P5,400.00, due 2026-10-18. Downpayment asked: P2,700.00. Nothing goes into the books until the invoice is recorded at release.

The new job order form with a customer, one line and the total · Owner-guide screenshot

5. Review the details and click **Record**, check the confirmation, then click **Record** again.
6. On the recorded job order, click **Take the downpayment**. In deposit VAT mode C, record the downpayment invoice first; then record the collection. For another payment, click **Take a payment**. See guide 37.

What the system does for you

It creates a tracked job order that will move through production stages. It automatically calculates the **Balance due**. Any downpayment you take is logged as a deposit until the order is finally released and invoiced.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong item or wrong amount on the job order.
- **Fix:** You cannot edit a saved document, and you should never delete it. Instead, view the document and click **Edit** (this will cancel the incorrect one and let you redo it with a new number).

Guide 37. Job Orders, Release Slips and Invoices

What it is for: Record a customer's order for team jerseys or services, track what they owe, release the finished goods to them, and issue the booklet invoice.

Before you start: Know the customer's name, what they are ordering from the price list, their wearers and sizes, and when it is due. When releasing, you need to see the ID of the person who claims the order.

Steps

Making a job order:

1. Open **Job Orders** under **Sales**, then click **+ New Job Order**. The form's heading is **New job order**.

The screenshot shows the Moonproject software interface. At the top, there's a header bar with 'MOONPROJECT' and 'Server date: Saturday 3 October 2026'. A search bar is present with the text 'Search customers, JOs, numbers...'. To the right of the search bar are buttons for '+ New' and 'Practice encoder'. On the left side, there's a sidebar menu with categories: 'OVERVIEW' (Home, Notifications, Calendar), 'SALES' (Post-dated checks, Customers, Price list, Collection Receipts, Customer Refunds, Deposit Transfers, 2307s Received, Deposit Forfeits, Credit Memos, Bad Debt Write-offs, Allowance for Credit Losses, Job Orders, Release Slips, Invoice Records, Invoice Records, Quick Sales, Quotations), and 'PRODUCTION'. The 'Job Orders' item under 'SALES' is highlighted. The main content area is titled 'Job Orders' and has a '+ New Job Order' button. Below the title are filters: 'All' (selected), 'Recorded', and 'Cancelled'. A table lists the job orders with columns: Number, Date, What, Amount, and Status. The table contains six rows of data, all with a 'Recorded' status.

Number	Date	What	Amount	Status
JO-000035	2026-10-03	This will record a job order for Practice Customer 1: 12 pieces, ₱5,400.00, due 2026-10-08. Downpayment asked: ₱5,400.00. Nothing goes into the books until the invoice is recorded at release.	₱5,400.00	Recorded
JO-000034	2026-10-03	This will record a job order for Practice Customer 3: 2 pieces, ₱2,000.00, due 2026-10-10. Nothing goes into the books until the invoice is recorded at release.	₱2,000.00	Recorded
JO-000033	2026-10-03	This will record a job order for Practice Customer 1: 4 pieces, ₱4,000.00, due 2026-10-10. Nothing goes into the books until the invoice is recorded at release.	₱4,000.00	Recorded
JO-000032	2026-10-03	This will record a job order for Practice Customer 1: 3 pieces, ₱3,000.00, due 2026-10-10. Downpayment asked: ₱1,500.00. Nothing goes into the books until the invoice is recorded at release.	₱3,000.00	Recorded
JO-000031	2026-10-03	This will record a job order for Practice Customer 1: 6 pieces, ₱6,000.00, due 2026-10-10. Downpayment asked: ₱3,000.00. Nothing goes into the books until the invoice is recorded at release.	₱6,000.00	Recorded
JO-000030	2026-10-03	This will record a job order for Practice Customer 2: 5 pieces, ₱5,000.00, due 2026-10-09. Downpayment	₱5,000.00	Recorded

The Job Orders list · Owner-guide screenshot

2. In the **Customer** panel, pick the customer from the list or click **+ New customer**. If it's a new customer, type **New customer's name**, pick **Kind of customer** (**Team, school or company** or **Person**) and click **Add customer** (or **Never mind**).
3. Under **What is made**, click **+ Add a line** to add more lines. Type at least two letters to search the price list, and pick the item. The price fills in from the price list for that number of pieces; you can type a different price.
4. Fill in the pieces. If you have a list of wearers, open **Wearers** on the line. Use the **Add a wearer...** or **Pull a whole group...** drop-down, or click **Paste from Excel**, paste the rows, and click **Add these**. For a name that is not on file, click **+ One-off name** and type it in. For each wearer pick the **Size** (or

Measured for a wearer on file) and type the **Jersey name**, **No.** and **Qty.** Once wearers are listed, the pieces follow them.

5. Under **Terms**, type the **Due in (days)** and pick the **Payment terms**.
6. Check the **Total** and **Downpayment asked** under **So far**, then click **Record**. If you are not ready, click **Save draft** instead: a draft has no number and records nothing until you press **Record**.

Taking the downpayment:

1. Open the job order.
2. If a downpayment is still asked and you have permission, click the **Take the downpayment** button. (In mode C, the button opens the downpayment invoice form first, then the collection follows).

A job order with the Take the downpayment button · Owner-guide screenshot

3. To take any other payment on the order, click **Take a payment** instead.
4. Finish recording the collection.

Changing a job order:

1. Open the job order you want to change.
2. Click **Edit** (or **Cancel** if you only want to cancel it). **Edit** first opens a box "Edit <number>" that says "A recorded document is never changed. <number> will be cancelled and a new one issued with a new number. Nothing changes until you record the replacement." You type a reason and click **Continue to edit**. **Cancel** opens a box "Cancel <number>?" that asks for a reason, then **Cancel document**.
3. Make your changes and click **Record**.
4. If there were deposits, you will see a notice to move them to the replacement job order.

The release slip:

1. Open the job order and click **Release**, or open **Release Slips** from the **Sales** menu. The form is **New release slip**. It starts with a **Job order** panel.
2. Under **What goes out**, tick the lines and pieces that are going out now.
3. Under **Who claimed it**, type the **Claimed by** name and pick the **ID seen**. Only the kind of ID is kept, never its number.
4. Under **Not ready yet** (shown only when the job order is not ready for release), the owner types the **Owner's reason to release it now** (at least 10 characters). Anyone else must first mark the order ready, or ask the owner.
5. Under **Still to be paid**, if the job is not paid in full, a user with permission to release unpaid work can release it (owner, accountant or encoder by default). They type **Why it goes out before it is paid** and **Pay within (days)** to give credit. Anyone else must take the payment first.
6. Under **Invoice**, type the **Invoice number (from the booklet)**, or tick **Invoice to follow (the booklet is not at hand)**.
7. Click **Record**. In the **Record this release?** box, click **Record** again (or **Go back**).

Recording the booklet invoice:

1. If the invoice was not recorded with the release, click **Invoice Records** from the **Sales** menu, or click **Record invoice** on the job order.
2. Pick the release by its number (it starts with REL-).
3. Under **Write these on the booklet**, copy the **VATable sales**, **VAT**, and **Total** exactly as shown to your physical booklet.
4. Type the **Invoice number (from the booklet)** you just wrote and the **Date on the invoice**. You can also fill the **Note** box.
5. Click **Record**.

What the system does for you

The system keeps track of the **Balance due** (what the customer still owes) on the job order. It only lets you release what is left, and knows if the invoice is to follow. When a job order is cancelled and reissued, any money already collected is kept as deposits held until you move it or pay it back.

Common mistakes and how to fix them

- **Mistake:** You cannot add wearers because you forgot the customer.
- **Fix:** The app shows **Pick the customer first**. Pick the customer before you add wearers.
- **Mistake:** You made a mistake on a recorded release slip.
- **Fix:** You cannot edit a release slip. Cancel its invoice record first (if it has one), then cancel the wrong release slip and record a new one with the right details.

Guide 03. Release and Invoice

What it is for: Hand over finished goods to the customer and record the official manual booklet invoice number.

Before you start: The job order must be marked as ready. Have your BIR sales invoice booklet ready.

Steps

1. Open the job order that is ready to be claimed.

New release slip

Job order
JO-000035 - Practice Customer 1 Change
Ready for release - due 2026-10-08 - balance due **₱0.00**

What goes out

Line	Ordered	Released	Pieces now
☒ 1. Polo shirts	12	0	12

Who claimed it
Claimed by *
Practice Collector
Government ID School ID Company ID
Another ID No ID
Only the kind of ID is kept, never its number.

Invoice

So far
Released now **₱5,400.00**
Balance due **₱0.00**

Write these on the booklet
VATable sales **₱4,821.43**
VAT **₱578.57**
Total **₱5,400.00**
Deposits applied: ₱5,400.00; left to collect: ₱0.00.

This will release 12 pieces of JO-000035 (₱5,400.00) to Practice Collector, government ID seen.

The new release slip form, with who claimed it - Owner-guide screenshot

- Under **Invoice**, type **Invoice number (from the booklet)**, or tick **Invoice to follow (the booklet is not at hand)**. Click **Record**, review **Record this release?**, then click **Record** again.
- If you recorded the invoice with the release, you are done. If the invoice is to follow, continue here: click **Record invoice** on the job order, or open **Invoice Records** under **Sales**. Pick the release.
- Under **Write these on the booklet**, copy **VATable sales**, **VAT**, and **Total** to the physical booklet.
- Type **Invoice number (from the booklet)** and **Date on the invoice**. Click **Record**, check the confirmation, and click **Record** again.

What the system does for you

It updates the job order to show how many pieces are left to claim. When you record the invoice, it automatically moves the customer's downpayment from "deposits" to pay off the invoice, and books the official sale and VAT for the accountant.

Common mistakes and how to fix them

- Mistake:** You typed the wrong booklet invoice number.
- Fix:** Never delete the record. Cancel the invoice record (the release slip stays), and create a new invoice record using the correct booklet number. Mark the physical booklet invoice as "cancelled (all copies kept)".

Printed date on an invoice record

What it is for: Record the PRINTED DATE from the booklet or paper document, including when you type it later.

Before you start: Have the paper in front of you. The date must be real, today or earlier, and outside a month the accountant has signed off.

Steps:

1. Fill **Date on the invoice** with the date printed on the paper. Leave it empty only when that date is today.
2. Click **Record**, check the date and amounts, then click **Record** again.

What the system does: The recorded document and its journal use this date; its VAT goes to that month. The app still keeps when it was entered. It refuses a future date, an impossible date, or a date in a signed-off month.

Common mistakes: "Type the date printed on the document like 2026-09-30, or leave it empty for today." means check the day, month and year. "The date printed on the document cannot be after today (...)" means check the paper and the shop PC's date. "... is already signed off at month-end, so nothing new is dated ..." means stop and ask the accountant; do not change the true date just to get past it.

Guide 04. Collection

What it is for: Record money received from a customer to pay off their balance due or add to their deposits.

Before you start: Know the exact amount received, where it went (Cash, GCash, Bank), and have any 2307 withholding certificates from the customer.

Steps

1. On the **Sales** menu, click **Collection Receipts**.
2. Click **+ New Collection Receipt**.
3. Pick the customer or the specific job order.
4. Type the amount received.
5. If the customer withheld tax, open **Customer withheld tax (2307)** and type **Amount withheld**. This section stays open when withholding is already in use.
6. Under "Where did the money go?", click the button for where you put the money (e.g., **Cash on hand**, **GCash**). You can split the amount if they paid partly in cash and partly in GCash.

This will record ₱1,500.00 received from Practice Customer 1 in Cash on hand (main cash box), CR 880020: ₱1,500.00 for JO-000031.

The new collection form, with where the money went · Owner-guide screenshot

7. Click **Record**.

What the system does for you

It immediately updates the cash balances so the shop knows exactly how much money is in the drawer or GCash. It automatically lowers the customer's balance due or adds it to their deposits.

Common mistakes and how to fix them

- **Mistake:** You clicked GCash but the money was actually handed to you in Cash.
- **Fix:** Never delete the record. View the collection and click **Edit**. The system will cancel the old one (reversing the mistake) and let you record a new collection with the right cash place.

Printed date on a collection

What it is for: Record the PRINTED DATE from the booklet or paper document, including when you type it later.

Before you start: Have the paper in front of you. The date must be real, today or earlier, and outside a month the accountant has signed off.

Steps:

1. Fill **Date on the CR** with the date printed on the paper. Leave it empty only when that date is today.
2. Click **Record**, check the date and amounts, then click **Record** again.

What the system does: The recorded document and its journal use this date; its VAT goes to that month. The app still keeps when it was entered. It refuses a future date, an impossible date, or a date in a signed-off month.

Common mistakes: "Type the date printed on the document like 2026-09-30, or leave it empty for today." means check the day, month and year. "The date printed on the document cannot be after today (...)" means check the paper and the shop PC's date. "... is already signed off at month-end, so nothing new is dated ..." means stop and ask the accountant; do not change the true date just to get past it.

Guide 05. Quick Sale

What it is for: Quickly record a walk-in sale where the customer pays and takes the item immediately.

Before you start: Have your BIR sales invoice booklet ready to write on. Know what the customer is buying and how they are paying.

Steps

1. On the **Sales** menu, click **Quick Sales**.
2. Click **+ New Quick Sale**.
3. Under the lines, type the **Description** (e.g., Shorten sleeves) and the **Price each**.
4. Choose how they paid (e.g., **Cash on hand**, **GCash**).

The screenshot shows the 'Quick sale' form in the Moonproject application. The sidebar on the left lists various menu items under 'OVERVIEW', 'SALES', and 'PRODUCTION'. The 'Quick Sale' menu item is highlighted. The main form area has a header with the Moonproject logo, server date, search bar, and buttons for '+ New' and 'Practice encoder'. The 'Quick sale' section is divided into several parts: a 'Customer' field, a 'What was sold' section with buttons for 'Repair / alteration', 'Ready-made item', and 'Made to order', and a table with columns for 'Shc', 'Qty', 'Price', and 'Discount'. The 'Invoice' section has an 'Invoice number (from the booklet)' field. The 'Where did the money go?' section has buttons for 'Cash on hand', 'GCash', and 'Bank'. On the right, a 'So far' summary shows 'P150.00'.

The quick sale form with one line and how it was paid · Owner-guide screenshot

5. Type the booklet invoice number.
6. Click **Record**.

What the system does for you

In one fast step, it records the sale, updates the cash balance, and logs the invoice for the accountant. It handles all the VAT math automatically.

Common mistakes and how to fix them

- **Mistake:** You typed the wrong price or the wrong booklet invoice number.
- **Fix:** Never delete the record. View the quick sale and click **Edit**. The system will cancel it and let you make a new one. Mark the physical booklet invoice as "cancelled (all copies kept)".

Guide 40. Price List and Quotations

What it is for: Add items and their prices to the price list, and make quotations to give to your customers or prospects.

Before you start: You will need the exact codes, names, classes, and units for the items you want to sell. For a quotation, you will need the customer's details and the items they want.

Steps

Adding an item to the price list

1. On the **Sales** menu, click **Price list**.

The screenshot shows the Moonproject application interface. At the top, there's a header bar with 'MOONPROJECT', 'Server date: Saturday 3 October 2026', a search bar for customers, JOs, and numbers, and buttons for '+ New' and 'Practice encoder'. The left sidebar lists various menu items under 'OVERVIEW', 'SALES', and 'PRODUCTION'. The 'Price list' item under 'SALES' is highlighted. The main content area is titled 'Price list' and features a '+ New item' button. Below this is a search bar labeled 'Search name or code'. A table titled 'Items' displays a single entry: 'PRACTICE-PATCH' with a code, a name link 'Practice name patch', class 'Service', unit 'pc', and status 'Active'. Navigation buttons 'Previous' and 'Next' are located below the table.

Code	Name	Class	Unit	Status
PRACTICE-PATCH	Practice name patch	Service	pc	Active

The price list · Owner-guide screenshot

2. Click **+ New item**.
3. Type the **Code** and **Name**.
4. Choose the **Class** (**Made-to-order garment**, **Service** or **Ready-made item**) and the **Unit** (**Piece** or **Set**). If the unit is a set, type the **Components per set**. If the class is made-to-order garment, type the **Garment type**.
5. Click **Save**. To fix the code or name later, open the item and click **Edit item**.

Adding or changing a price

1. On the **Price list** screen, click the name of the item. (You must have permission to manage prices, and the item must be active, or the **New effective-dated price** panel will not appear.)
2. Under **New effective-dated price**, check the **Effective from** date. It can be today or later, not earlier.
3. Type the **Minimum quantity** and the **Price per unit**.
4. Click **Save price**. Prices include VAT. An item with no price cannot be used on a quotation yet.

Making a quotation

1. On the **Sales** menu, click **Quotations**, then click **+ New Quotation**.

The new quotation form · Owner-guide screenshot

2. Type two or more letters in **Customer**, then click the matching name, or type a **Prospect name**.
3. Type who the **Contact** person is, and how many days the quotation is good for under **Valid for days**.
4. Under **Items**, type two or more letters in **Price list item**, then click the matching item. Use **Change item** to pick another one.
5. Type the **Description** and **Quantity**.
6. (Optional) Open **Add a line discount** to enter a **Line discount** and **Discount reason**, or **Change the usual price** to enter an **Override price** and **Override reason**. Choices already in use stay open.
7. If they want more items, click **+ Add item** and repeat steps 4 to 6. **Remove item** takes a line off.
8. Under **Terms and discount**, type the **Terms** and **Notes**. If needed, open **Add a document discount** to enter a **Document discount** and **Discount reason**.

9. Click **Record**. A box asks you to confirm. Or click **Save draft** to keep it without a number.

Printing a quotation

1. Open the recorded quotation.
2. Click **Print** (shown if you are allowed to print quotations).

Turning a quotation into a job order

1. Open the recorded quotation.
2. Click **Make a job order**.
3. The system fills in the details. You can change them before you click **Record**.

What the system does for you

When you add a new price, the system keeps the old prices in the **Price history**. Old quotations will still show the old price, but new quotations will use the new price if the date and quantity match.

When you make a job order from a quotation, it says "Filled from quotation" and brings over the exact items, quantities, and prices, so you do not have to type them again. However, you will still need to pick the payment terms and due days before you record.

Common mistakes and how to fix them

- **Mistake:** You want to change the class or unit of an item, but the fields are locked.
- **Fix:** If an item has prices, its class, garment type, and unit cannot change. Click **Deactivate**, then confirm by clicking **Deactivate** in the "Deactivate <item>?" box (which warns that an item cannot be turned back on). Then click **+ New item** to make a fresh one.
- **Mistake:** You cannot click **Make a job order** on a quotation.
- **Fix:** The quotation might be for a prospect, or your role may not be allowed to record job orders. A job order needs a real customer. Go to Customers and add them, then go back to the quotation, click **Edit**, and pick that customer.

Guide 55. Customer checks

What it is for: Keep track of the checks customers give you. See which checks are waiting for their date, which are ready to deposit, and handle checks that the bank returns.

Before you start: You need the check number, the bank, and the check date to record a check.

Steps

Taking a check on a collection:

1. When recording a collection, click the checks account as the place the money went to.
2. Fill in **Check no.**, **Bank** and the date on the check.

Adding a post-dated check:

1. On the **Sales** menu, click **Post-dated checks**.
2. Click **+ Add a post-dated check**.

The screenshot shows the Moonproject software interface. At the top, there's a header bar with 'MOONPROJECT' on the left, 'Server date: Saturday 3 October 2026' in the center, and a search bar on the right with the text 'Search customers, JOs, numbers...'. To the right of the search bar are two buttons: '+ New' and 'Practice encoder'. Below the header is a sidebar menu. Under the 'OVERVIEW' section, there are links for 'Home', 'Notifications', and 'Calendar'. Under the 'SALES' section, 'Post-dated checks' is highlighted. Other links in the sidebar include 'Customers', 'Price list', 'Collection Receipts', 'Customer Refunds', 'Deposit Transfers', '2307s Received', 'Deposit Forfeits', 'Credit Memos', 'Bad Debt Write-offs', 'Allowance for Credit Losses', 'Job Orders', 'Release Slips', 'Invoice Records', 'Invoice Records', 'Quick Sales', and 'Quotations'. At the bottom of the sidebar is the 'PRODUCTION' section. The main content area is titled 'Post-dated checks'. Below the title is a descriptive text: 'A check dated after today is not money yet: it waits here and is recorded as a collection on its date. Nothing on this list is in the books.' Below this text is a form titled 'Add a post-dated check'. The form has a text input field for 'Type 2 or more letters of the name or code'. Below this are four input fields: 'Check number *', 'Bank *', 'Date on the check *', and 'Amount *'. The 'Date on the check *' field has a calendar icon and the text 'mm/dd/yyyy'. The 'Amount *' field has the text '0.00'. Below these fields is a 'Note' input field. At the bottom of the form are two buttons: 'Add to the list' and 'Close'. Below the form is a section titled 'The list' with the text 'No post-dated check is listed.'

The form for adding a post-dated check · Owner-guide screenshot

3. Pick the customer, then fill in **Check number**, **Bank**, **Date on the check** and **Amount**. If the customer has job orders, tick the ones the check is **For**. You can type a **Note**. Click **Add to the list**.
4. When the check is due, its status says **Due: record it now**. Click **Record the collection** next to it. If the customer gave a new check instead, click **Void** and type a reason.

Depositing a check:

1. On the **Money** menu, click **Checks on hand**.
2. Tick the checks you want to deposit.
3. Choose the **Bank** to deposit them into.
4. Click **Deposit the ticked checks**. Read the box **Record this deposit?**, then click **Record**.

A check the bank returned:

1. On the **Money** menu, click **Checks on hand**.
2. Find the check under **Deposited checks (if the bank returns one)**.
3. Click **Returned by the bank**.
4. Type the reason the bank gave. Fill in the **Bank charge for the returned check** (leave it blank if none). The box that cancels the collection is ticked; untick it only if the customer asked you to deposit the check again. Click **Record the return**.

What the system does for you

A post-dated check on the **Post-dated checks** list is only a reminder: nothing is in the books until you record the collection. A check recorded on a collection goes to **Checks on hand**, where it stays until you deposit it. Depositing records one transfer from Checks on hand to the bank. If the bank returns a check, the check comes back to Checks on hand, the bank charge is recorded, and the collection is cancelled (unless you unticked it), so the customer owes the money again.

Common mistakes and how to fix them

- **Mistake:** You want to cancel a collection, but its check was already deposited.
- **Fix:** The app says the check was deposited. If the bank returned it, record that on **Checks on hand** first. If the deposit was a mistake, cancel the deposit first, then the collection.
- **Mistake:** You see a message that the books hold more or less in Checks on hand than the list.
- **Fix:** Ask your accountant to look at the cash book.

Guide 27. Credits and Write-offs

What it is for: Handle special changes to what a customer owes. You can record a 2307 when no cash came in, forfeit a deposit, record a credit memo, or write off a bad debt.

Before you start: Know which customer and invoice or job order you are changing.

Steps

Recording a 2307 with no cash

Use this for a customer's 2307 when no cash came in.

1. On the **Sales** menu, click **2307s Received**.
2. Click **+ New 2307 Received**.
3. First pick the **Customer**, then choose the invoice under **Which invoice?**.

2307 received with no payment

For a 2307 that came after the customer paid the invoice net of the tax. A 2307 that comes with a payment goes on the collection.

Customer
Practice Customer 1 [Change](#)

Which invoice?

Invoice no. 50001 · IR-000001 · JO-000001 · 2026-09-03	owes ₱0.00
Invoice no. 50005 · IR-000009 · JO-000005 · 2026-09-07	owes ₱0.00
Invoice no. 50009 · IR-000017 · JO-000009 · 2026-09-11	owes ₱0.00
Invoice no. 50013 · IR-000025 · JO-000013 · 2026-09-15	owes ₱0.00
Invoice no. 50017 · IR-000033 · JO-000017 · 2026-09-19	owes ₱0.00
Invoice no. 50021 · IR-000041 · JO-000021 · 2026-09-23	owes ₱0.00
Invoice no. 50025 · IR-000049 · JO-000025 · 2026-09-27	owes ₱0.00

The 2307 received form · Owner-guide screenshot

4. Type the **Tax withheld (on the 2307)**.
5. Pick the **Tax code (ATC)** and type the **Quarter on the 2307** (like 2026-Q3). You can also add a **Note** on the 2307.
6. Click **Record**.

Forfeiting an abandoned deposit

The owner or accountant may forfeit a deposit when a customer abandons a job order.

1. On the **Sales** menu, click **Deposit Forfeits**.
2. Click **+ New Deposit Forfeit**.
3. Pick the **Customer** and **Which job order?**.

The screenshot shows the 'Keep an abandoned order's deposit' form in the Moonproject application. The interface has a dark blue header with the Moonproject logo, server date (Saturday 3 October 2026), a search bar, and a '+ New' button. A left sidebar lists navigation options under 'OVERVIEW' and 'SALES'. The main content area is titled 'Keep an abandoned order's deposit' and includes a blue informational box, a 'Customer' selection field, a 'Which job order?' table, an 'Amount kept' input field, a 'Why is it kept?' text area, and 'Forfeit' and 'Back' buttons.

Job Order	Amount
JO-000035 - Ready for release	5,400.00 held
JO-000031 - Open	3,000.00 held

The deposit forfeit form - Owner-guide screenshot

4. Type the **Amount kept** or click **All of it**.
5. Type **Why is it kept? (at least 10 characters)**.
6. Click **Forfeit**.

Recording a credit memo for a return or allowance

The accountant may post a credit memo for a return or an allowance.

1. On the **Sales** menu, click **Credit Memos**.
2. Click **+ New Credit Memo**.
3. First pick the **Customer**, then choose the invoice under **Which invoice?**.
4. Pick **Return (goods came back)** or **Allowance (price reduced)**.
5. Type the **Amount, with VAT** or click **All that is left**.
6. Type the manual **Credit memo form no. (if one is used)**.
7. Type **Why? (at least 10 characters)**.

8. Click **Record**.

Writing off a bad debt

The accountant may write off a bad debt.

1. On the **Sales** menu, click **Bad Debt Write-offs**.
2. Click **+ New Bad Debt Write-off**.
3. First pick the **Customer**, then choose the invoice under **Which invoice?**.
4. Type **Why is it written off? (at least 10 characters)**.
5. Click **Write off**.

What the system does for you

- **2307s Received:** It takes the tax off what the invoice owes.
- **Deposit Forfeits:** It marks the job order as abandoned. This means nothing more is released or invoiced on it. It keeps the money as other income.
- **Credit Memos:** It makes your output VAT go down. The amount is taken off what the invoice owes. Any part that was already paid is kept as customer credit.
- **Bad Debt Write-offs:** It writes off the bad debt, but the output VAT stays. Collections on it are refused until the write-off is cancelled.

Common mistakes and how to fix them

- **Mistake:** You recorded a form with the wrong amount or the wrong invoice.
- **Fix:** Open the document from the list under the same menu item and click **Cancel** (cancelling each one reverses its effects; a reason is asked). You can then record a new one to fix the mistake.

Customer refunds and moving a deposit

What it is for: Return money held for a customer or move a deposit to their replacement job order.

Before you start: Check the customer's held balance and the owner's agreed refund or replacement order. A website-order return has its own procedure below.

Steps:

1. To refund held money, open **Sales > Customer Refunds > + New Customer Refund**.
2. Pick **Who gets money back**, then **What is paid back?**. Choose the actual cash place and amount under **Where did the money come from?**.
3. Fill **Reason (at least 10 characters)**. Click **Record**, check the confirmation, then **Record** again. Keep the actual payment proof.
4. To move a deposit, open **Deposit Transfers > + New Deposit Transfer**. Pick the customer under **Whose money**, the source under **Where is the money now?**, and the destination under **Which job order does it go to?**.
5. Enter **Amount**, or leave it blank to move as much as both allow. Add a **Note**, then **Record**, review and confirm.

What the system does: A refund reduces money held and the selected cash place. A deposit transfer moves held money between the customer's orders; it does not receive new cash.

Common mistakes: Do not record a second collection to move an existing deposit. Check the replacement order number after an edit. Recording a refund does not itself make a bank transfer.

Guide 47. Customer Emails

What it is for: Automatically send updates to your customers about their orders and statements of account. You can track what was sent, failed, or is waiting to go out.

Before you start: You will need an App Password from your Google account (with 2-step verification turned on). Only the owner can change the email settings. Only customers who have agreed to receive emails will get them.

Steps

To turn on sending emails:

1. On the **Admin** menu, click **Customer email settings** (or go to **Customer emails** and click the **Settings** tab).

The screenshot shows the 'Customer and payslip emails' settings page in Moonproject. The left sidebar contains a navigation menu with sections: OVERVIEW (Home, Notifications, Calendar), SALES (Post-dated checks, Customers, Price list, Customer emails - selected), and various other sales-related items. The main content area has tabs for Outbox, Email statements, and Settings (selected). Under the 'Sending' section, there is a yellow warning box: 'Sending is OFF. No customer is emailed until you turn it on.' Below this is a checkbox labeled 'Send emails to customers who agreed to them' which is currently unchecked. A note below the checkbox says 'Turning it on starts from now: orders recorded while it was off are not emailed later.' The 'Mail server' section contains four input fields: 'Mail server', 'Port' (with '587' entered), 'User name', and 'Sender name'. A hint below the 'Sender name' field says 'How the customer sees who it is from.'

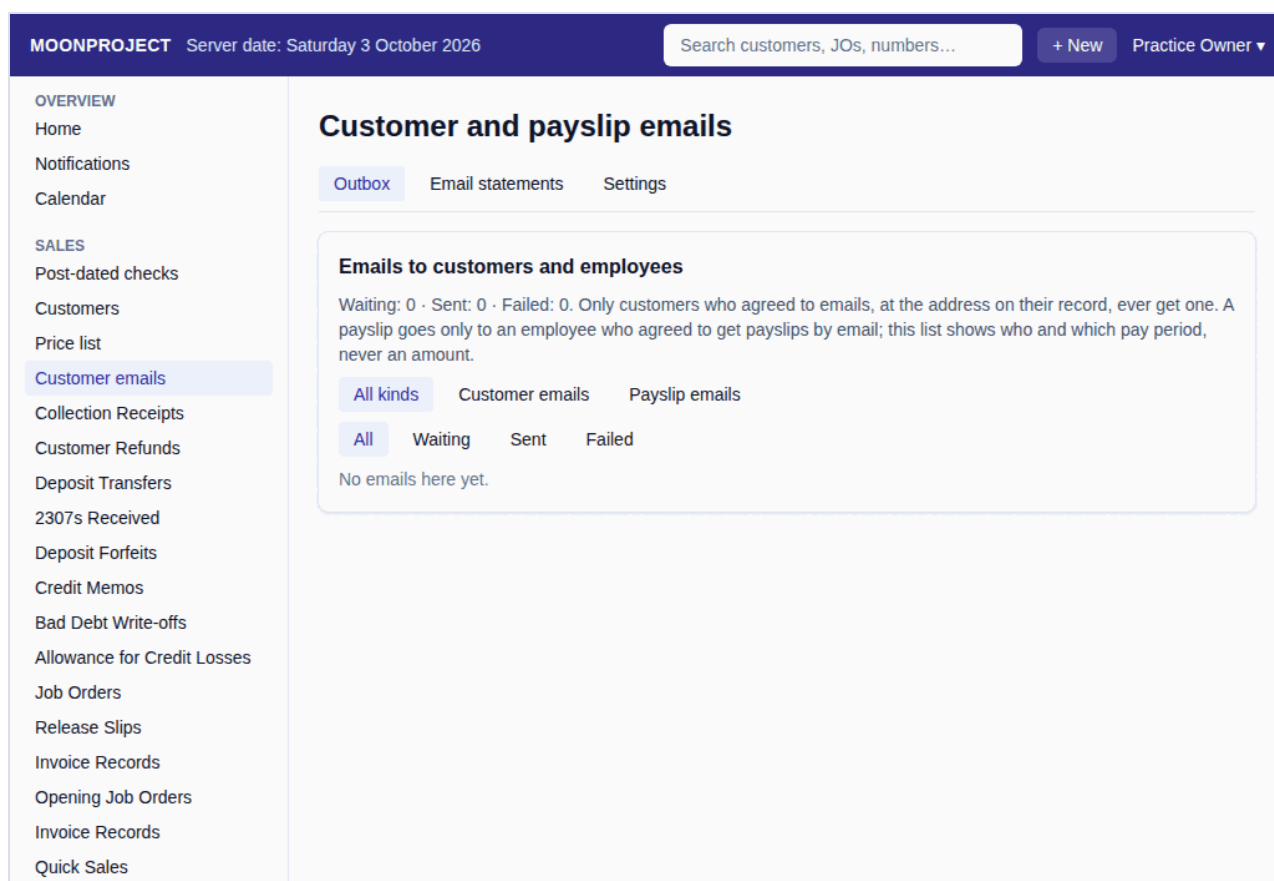

The Settings tab for customer emails · Owner-guide screenshot

2. You will see a notice like "Sending is OFF. No customer is emailed until you turn it on." Check the box to send emails to customers who agreed to them. "Turning it on starts from now: orders recorded while it was off are not emailed later."
3. Type your **Mail server**, **Port**, **User name**, **Sender name**, and **Sender address**. If anything is missing, a message like "Still needed before sending can be on: ..." will show you what.
4. Type the **App Password**. The App Password is never shown again once you save it.
5. Click **Save** and it will open a password box asking to "Save the email settings".

6. Click **Send a test email**. This button stays off until an App Password is saved. The screen will remind you: "The test email goes to the sender address. Save your changes first." This also opens a password box asking to "Send a test email".

To check the outbox or send again:

1. On the **Sales** menu, click **Customer emails**.
2. Stay on the **Outbox** tab to see the emails. The counts at the top show how many are waiting, sent and failed. You can filter by kind (**All kinds**, **Customer emails**, **Payslip emails**) and by status (**All**, **Waiting**, **Sent**, **Failed**). Click the name of an email (for example **Order received**) to read it.

The Outbox tab of customer emails · Owner-guide screenshot

3. If an email is marked as failed and you are allowed to resend (like the owner), you can try sending it again by clicking the **Send again** button next to it. If sending is off, it will warn you: "Sending emails is turned off. Turn it on in the email settings first."

To email statements in bulk:

1. On the **Sales** menu, click **Customer emails**.
2. Go to the **Email statements** tab.
3. Pick the **Statement date** and click **Show customers**.
4. Customers with a balance, an email address and consent are ticked already. Untick any you do not want to email. Customers who cannot be emailed are listed under **Cannot email**, with the reason.
5. Click the **Send** button (it shows how many, for example **Send 3 statements**). Each customer can be queued only once for the same statement date.

To email a statement of account:

1. On the **Reports** menu, click **Customer statement**.
2. Pick a customer and dates, then click **Show**.
3. If you have permission to send statements, the **Email this statement** button appears. Click it.
4. On success, you will see "Queued. It goes out with the next batch: see Customer emails." Or, if they did not agree, it will say "This customer has not agreed to get emails."

What the system does for you

The system automatically creates and queues emails for "Order received", "Ready for pick-up", and "Picked up" as you process job orders. It also queues "Statement of account" emails when you click the button, and payslip emails for employees who agreed to get their payslip by email (the list shows the pay period, never an amount). In the outbox, it tracks if an email is "Waiting to be sent", successfully "Sent", or "Failed" (a failed email is tried again by the system, and shows how many tries it had) so you know exactly what the customer has received.

Common mistakes and how to fix them

- **Mistake:** You fixed a typo in the customer's email address and expect a queued email to go to the new address.
- **Fix:** An email keeps the address it had when it was queued, which you can see under the customer's name in the outbox. The **Send again** button tries that same queued address.

Website shop, POS and online orders

What it is for: Sell stocked items at the counter and deal with orders placed on the website.

Before you start: The owner arranges the public shop setup in guide 14 and the payment settings. Confirm prices, variants and stock before selling. Keep invoice and CR booklets ready.

Steps:

1. Open **Sales > Website shop**. On **Categories**, type **New category name** and click **Add category** if needed. On **Products and stock**, click **+ New product**. Fill **Name**, **Category**, **Price per piece (P)**, **Short description**, sizes and colours, then **Save**. Use **Edit** for corrections and **Hide** or **Show** for visibility.
2. Click **Stock** on the product. Use **Pieces came in** and **Add pieces** for a new batch, or **I counted the shelf** and **Record the count** for a count. Type the pieces per size and colour and a note; leave other cells empty.
3. At the counter open **POS**. Use **Search products**, choose the item and its size and colour, and add the pieces. Use **One more** or **One fewer** to correct the quantity; click **Done** after choosing variants.
4. Fill **Invoice no.**, **CR no.** and **Paid by**. For cash fill **Cash received** if change is needed; for a transfer fill **Reference no.**. Check the total and click **Record sale · [amount]**.
5. For a website order open **Online orders**, then the order. Check the actual bank receipt against its payment reference and picture before confirming.

6. Click **Payment found: confirm**, choose the **Customer**, enter **Invoice no.** and **CR no.**, then click **Confirm and record the sale**. If the payment is wrong, use **Reject payment**, give the reason the customer will see, and click **Reject the payment**.
7. After preparing the order use **Ready for pickup** or **Sent out**, then **Handed over: completed** when handed over or finished.

What the system does: Confirmation records the quick sale and payment and takes pieces out of stock. The order history keeps its changes. The website payment picture alone does not prove that money arrived.

Common mistakes: Do not confirm an unpaid order. Check the bank first. Do not record the same website order again as a separate POS or quick sale. If a recorded order must be cancelled, follow the next section.

Website payment settings

What it is for: Tell customers where to pay and connect that bank or wallet to the books.

Before you start: The owner checks the real company account and its QR picture. Encoders cannot change these settings.

Steps:

1. Open **Sales > Website shop** and its **Online payment** tab.
2. Fill **Bank or wallet**, **Account name**, **Account number shown** and **Money goes into**. Choose the matching cash account in the books.
3. Use **Upload the QR picture**, or **Change QR picture**, and check the preview against the real bank or wallet.
4. If delivering, use **+ Add a delivery area**, enter its places and fee. With no areas, ordering is pickup only.
5. Fill **Instructions for customers** and click **Save**. Check **View the website shop**.

What the system does: Online ordering stays closed until payment is set up. The saved QR is what customers see from then on.

Common mistakes: Do not choose a different ledger cash place from the real account receiving the money. Correct it before taking orders; ask the accountant about any already recorded payments.

Cancel or return a confirmed website-shop order

What it is for: Reverse a whole confirmed online order or a whole order returned after it was ready or completed.

Before you start: Check the order, returned pieces and refund arrangements. You need permission to manage online orders and cancel its quick sale. This action is for the whole order, not a partial return.

Steps:

1. Open **Sales > Online orders** and open the order under **Paid · to prepare**, **Ready / sent**, or **All**.
2. Click **Cancel or return**.
3. Fill **Why (kept with the order; the customer does not see it)** with 10 to 200 characters.

4. Read the notice about the sale, payment and stock. Click **Cancel the order** for a confirmed order, or **Return the order** for a ready or completed order.
5. Arrange any actual customer refund outside the app, with the owner or accountant, and retain its proof.

What the system does: It cancels the linked sale and payment once and returns the pieces to stock. The order becomes **Cancelled** or **Returned**. If the quick sale was already cancelled, it only updates the order. The customer sees the status, not the private reason. A cancelled or returned order cannot move on to ready or completed.

Common mistakes: "The app does not pay the customer back." Recording the return is not a bank transfer or cash refund. A second cancellation is refused. Do not repeat it or make another sale to offset it.

Support inbox

What it is for: Follow up enquiries and problems sent through the website.

Before you start: Read the customer's message and keep any promised follow-up details.

Steps:

1. Open **Sales > Support inbox** and choose the enquiry.
2. Read the message and any attachments.
3. Contact the customer through the shop's usual agreed channel.
4. Fill **Note** with what was done, choose **Status**, and click **Save**.

What the system does: It keeps the enquiry and the staff notes together.

Common mistakes: A note records your follow-up; do not assume it sends a reply to the customer. Check the status before closing the enquiry.

Production

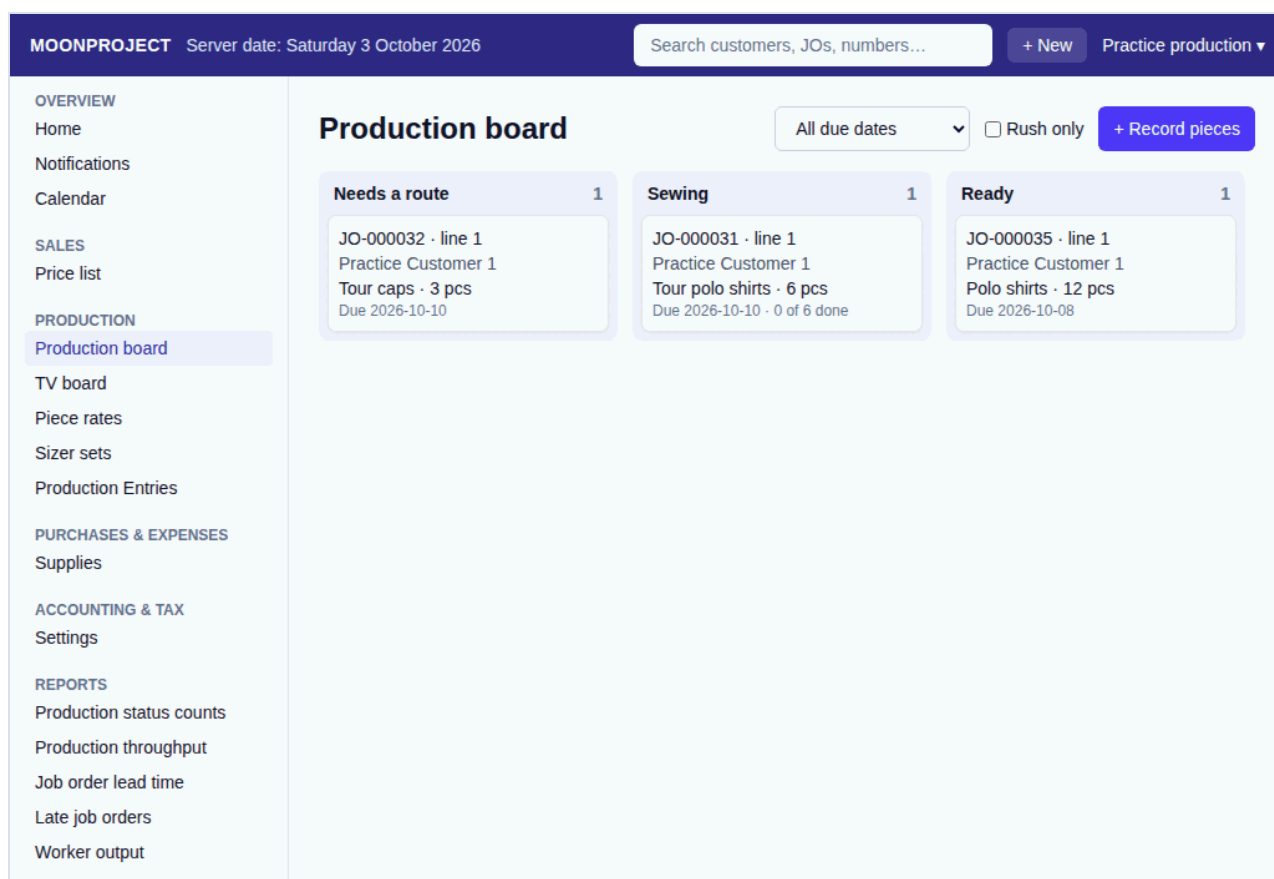

Guide 41. Production Board and Piece Rates

What it is for: View what is being made in the workroom right now, record which worker did how many pieces to work out their pay, and manage the list of piece rates.

Before you start: You will need the job order numbers or the physical work tickets that you want to check or record. To change the piece-rate list, you must have permission to manage rates.

Steps

1. **To view the workroom:** On the **Production** menu, click **Production board**.

The production board, with a column for each step · Owner-guide screenshot

2. **To find a job order:** Look at the columns. New job orders are under **Choose production steps**. Job orders ready for release are under **Ready**. In the middle are the production steps. You can narrow down the list using the **All due dates**, **Due within 7 days**, or **Overdue** filters. You can also tick **Rush only**. Type a job number or customer in **Search job number or customer**. Click **Reset filters** to clear the search, due filter and Rush only. The board refreshes every 30 seconds and shows **Updated** with the last successful update time. **Not updated since** means the cards may be old; they stay visible while it tries again.
3. **To check colors:** A red **RUSH** tag means the job order is a high priority. If a card has a red line on the left side and a red due date, it is overdue.

4. **To set up or change a route:** Click the job order card on the board. Choose the steps it must go through, the garment type, and the complexity. Click **Save production steps**. If you need to fix a mistake later, click the card and click **Change production steps**.
5. **To record pieces done:** On the **Production** menu, click **Production board**, then click **+ Record pieces**. The card's box on the board also has a **Record pieces** link per step, which opens the form with that job order and step filled in.

Job order and step

JO-000031 · Practice Customer 1 · due 2026-10-10 ▼

Sewing Packing

Who did how many pieces

Line	Worker	Pieces	Rework	Rate (blank = table)
1 ▼	▼		☐	

+ Another worker

Record Back

So far
0 pcs

The Record pieces form · Owner-guide screenshot

- Under **Job order and step**, choose the **Job order** and the **Step**.
- Under **Who did how many pieces**, choose the **Line** and the **Worker**. Type the number of **Pieces**.
- If a worker is fixing mistakes, open **Change rate or record rework** and tick **Rework (pasubra)**. Ticking **Rework (pasubra)** also needs a typed rate: "Row N: type the rework (pasubra) rate." A typed rate needs a reason in the **Why this rate?** box ("say why this rate is typed").
- The **Rate per piece** shows the last calculated rate. To change it, open **Change rate or record rework**. The **Rate (blank = table)** box starts empty. Leave it blank and the server takes the rate from the table.
- To add more workers for the same step, click **+ Another worker**.
- If you record more pieces than the last step finished, you must explain why under **Why more pieces than came out of the step before? (at least 10 characters)**.
- Click **Record**.

6. **To mark a step as finished:** Click the job order card on the board. Click **Complete**. If the step is no longer needed, click **Not needed**. **Not needed** shows only for a step that is still pending. If a step was closed by mistake, click **Reopen**. **Reopen** opens a box "Reopen <step>?" that asks for a reason and says "The step goes back to work until it is completed again. The job order is no longer ready."
7. **To view the TV board:** On the **Production** menu, click **TV board**. This is a big screen for the workroom wall. It refreshes every 30 seconds so everyone can see what to do next.
8. **To manage piece rates:** On the **Production** menu, click **Piece rates**. You can find rates by typing in the **Search garment type** box, or tick **Show history (rates that start later too)** to see old or future rates.
9. **To add a new rate:** Under **New rate**, pick the **Garment type**, **Step**, and **Complexity**. Type the **Rate per piece**, the date it starts under **From (today or later)**, and the reason under **Why (at least 10 characters)**. Click **Save rate**.

What the system does for you

The production board sorts your job orders into columns so you know exactly where each one is. When you record pieces, the system adds them to the worker's payroll. If you set a new piece rate to start next week, the system will keep using the old rate until the new date arrives, and pieces already recorded will keep the rate they originally got.

Common mistakes and how to fix them

- **Mistake:** You recorded pieces for the wrong worker.
- **Fix:** Do not try to delete the record. Under **Production Entries** on the **Production** menu, open the entry and click **Edit**, and put in the correct worker. The system will cancel the old record and make a new one.
- **Mistake:** A step is not showing on the entry screen.
- **Fix:** The step might not be set up on the job order's route. Go to the Production board, click the job order, and click Change production steps to add the missing step. Or, the step might already be marked as Complete. Go to the board, click the job order, and click Reopen next to that step.

Guide 45. Sizer Tracker

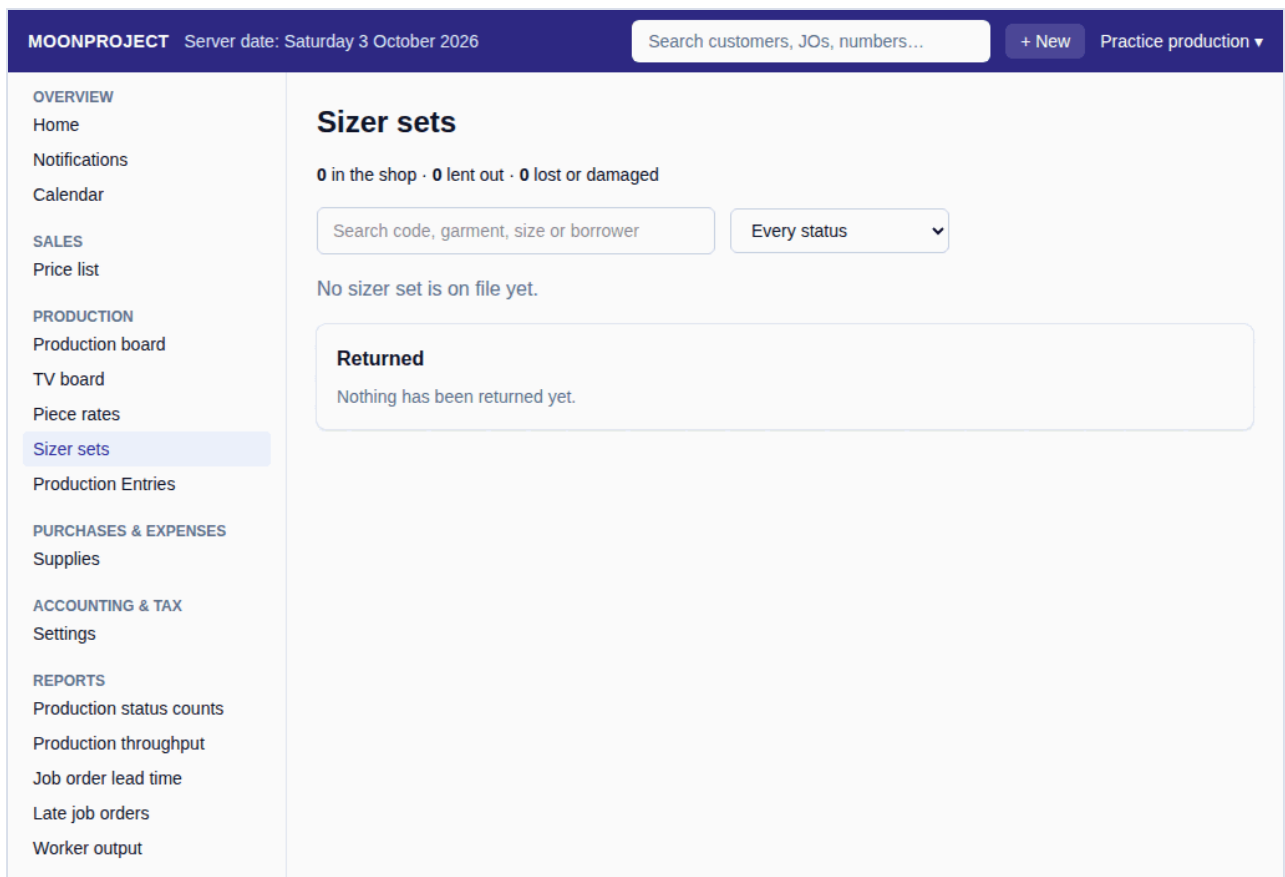

What it is for: See which sizer sets are in the shop, which ones are out with customers, and check who is late to bring them back. Record when you lend a set and when a customer returns it.

Before you start: Know which customer is borrowing the set and when they promised to bring it back. For returns, you need to know if the set came back complete or if something was lost or damaged.

Steps

To lend a set:

1. On the **Production** menu, click **Sizer sets**.

The Sizer sets screen · Owner-guide screenshot

2. Find the set in the list and click **Lend**. This button shows only for a set that is in the shop, and only if you are allowed to change sizer loans. You can search the list, or use the status drop-down to narrow it.
3. Under **Who is borrowing it?**, pick the customer.
4. Under **Due back on**, pick the date (it starts one week from today). The set goes out today.
5. Click **Lend it**.

To record a return:

1. On the **Production** menu, click **Sizer sets**.

2. Find the set in the list and click **Take back** (shown for a set that is lent out).
3. Under **What came back?**, choose **The set is back in the shop** or **The set is lost or damaged**.
4. Under **Condition**, type what is wrong, or type "Complete" if nothing is wrong.
5. Click **Record the return**.

To follow up on the ones still waiting:

1. On the **Production** menu, click **Sizer sets**.
2. Look for the **Overdue** message at the top. It lists the sets that are late, who has them, and how late they are.
3. In the list, a late set also has a red bar at the left of its row. Under **Who has it** you see when it went out, when it is due, and how late it is.

What the system does for you

It keeps track of where every sizer set is. It spots sets that are past their due date and shows them as overdue. A set can be lent only while it is in the shop, and taken back only once. When a set comes back, it adds a line to the **Returned** list at the bottom with the dates and the condition. Nothing is posted to the books.

Common mistakes and how to fix them

- **Mistake:** A customer lost the set or ruined it, and they paid for it.
- **Fix:** Record the return and choose **The set is lost or damaged**. The system does not charge them here. Record a quick sale to take their money for the set.
- **Mistake:** You lent the set to the wrong customer or put the wrong due date.
- **Fix:** Cancel and redo it. Take the set back (choose **The set is back in the shop**), type that it was a mistake in the **Condition** box, and then lend it again to the right person with the correct date.

People and Payroll

Guide 42. Employees, Attendance and Holidays

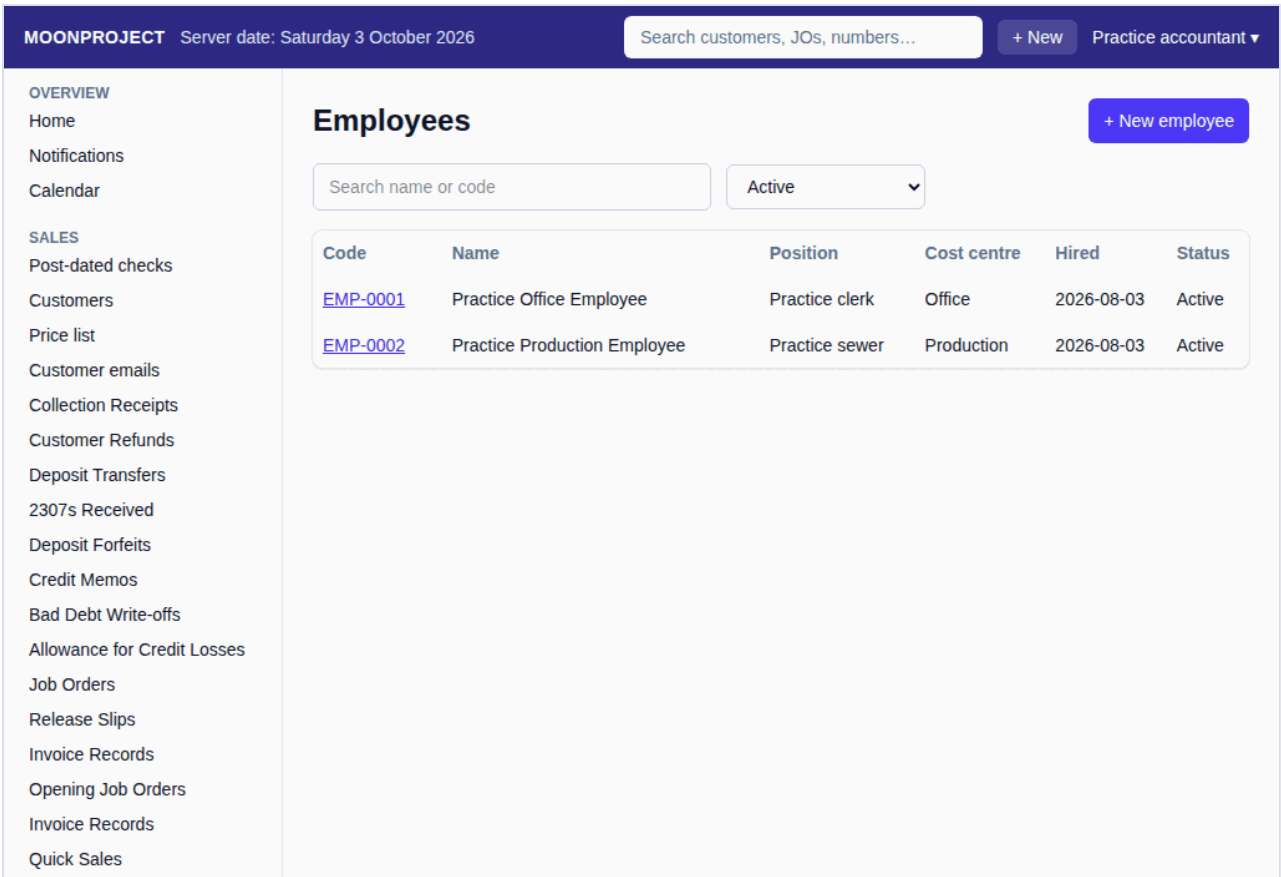

What it is for: Add employees to the system, set their pay rates, record daily attendance, and manage the list of holidays.

Before you start: You will need the employee's details, their hire date, and their pay rates. You also need to know the dates of any local holidays you want to add.

Steps

Adding an employee

1. On the **People & Payroll** menu, click **Employees**.

The Employees list · Owner-guide screenshot

2. Click **+ New employee**.
3. Type the **Full name**, **Hire date**, **Position**, and **Department**.
4. Choose the **Pay cost group**.
5. The form says "Set the pay on the next page." Click **Add employee** to open the new employee's page and **Set the pay**.

Adding government numbers

1. On the employee's page, under the **Details** panel, look for the **Government deductions** heading. You will see ticks for **SSS**, **PhilHealth**, **Pag-IBIG**, and **Withholding tax**. These start switched on. If you switch one off, you must answer **Why is one switched off? (at least 10 characters)**.

Practice Office Employee EMP-0001 Record separation

Details

Full name: Practice Office Employee Position: Practice clerk

Department: Cost centre: Office and sales

Hire date: 08/03/2026 Birthday (optional): mm/dd/yyyy

Paid by: Cash Bank or GCash account:

Emergency contact:

Government deductions

☒ SSS ☒ PhilHealth ☒ Pag-IBIG ☒ Withholding tax

Government numbers

SSS no. PhilHealth PIN Pag-IBIG MID TIN

An employee's page · Owner-guide screenshot

2. Under the **Government numbers** heading (this might be hidden from some users), type their **SSS no.**, **PhilHealth PIN**, **Pag-IBIG MID**, and **TIN**.
3. Click **Save changes**.

Setting the pay

1. On the employee's page, look for the **Pay** panel and the **Set the pay** (or **Change the pay**) section.
2. Pick the **From date**, **Pay type**, **Pay group**, and **Work week**.
3. Type the **Daily rate** or **Monthly rate**.
4. Check the box if they are a **Minimum wage earner**.
5. Type **Why (at least 10 characters)** you are setting this pay.
6. Click **Save pay**.

Recording a resigned employee

1. On the employee's page, click **Record separation**.
2. In the **Separation of** box, type the **Last day worked** and a **Reason (at least 10 characters)**.
3. Click **Record separation**.

Recording attendance

1. On the **People & Payroll** menu, click **Attendance**.
2. Use the ← **Earlier** or **Later** → buttons to find the right dates.
3. Pick a status mark for each day from the list (**P** Present, ½ Half day, **A** Absent, **R** Rest day, **L** Leave (SIL), **UL** Unpaid leave, **H** Holiday off, **HW** Holiday worked, or **RW** Rest day worked). The key is printed above the grid. For holidays, you can only pick the holiday marks.
4. For worked days (Present, Holiday worked, and Rest day worked), an **OT** box appears. Type the overtime in hours (like 1.5 or 1:30).
5. For night hours (worked between 10 PM and 6 AM), type them in the **Night** box (it appears for Present, Half day, Holiday worked and Rest day worked). For night hours that were also overtime, type them in the **Night OT** box (Present, Holiday worked and Rest day worked only). Type them in hours, like the OT.
6. You can click **Undo changes** if you make a mistake. When you are done, click **Save changes** (the button will show how many changes you made, for example **Save 3 changes**).

Adding a local holiday

1. On the **People & Payroll** menu, click **Holidays**.
2. Under the **Add a holiday** panel, type the **Date** and **Name**.
3. Pick the **Kind** (**Special non-working day** or **Regular holiday**).
4. Type the **Source** (**proclamation or ordinance**).
5. Click **Add holiday**.
6. Under the **Regular holidays and special non-working days** panel, you can click **Switch off** to stop treating a day as a holiday. A "Switch off" box will open asking for a reason. Type the reason and click **Switch off** again.

What the system does for you

It keeps track of employee information and their pay history. It calculates the correct payroll based on the attendance statuses, overtime hours, and the list of holidays. When you add a holiday, the system automatically marks it on the attendance grid. When you separate an employee, their record is kept, and the system still pays what is owed up to their last day.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong attendance status or overtime for a day.
- **Fix:** If the day is not locked, change the status or overtime on the Attendance screen and click **Save changes**. If the day is locked, you must cancel the payroll run that paid it first, then change the attendance.
- **Mistake:** You added a wrong holiday.
- **Fix:** You cannot delete a holiday, but you can click **Switch off** on the Holidays screen. Note that "Days already marked as a holiday must be changed first" before you can switch it off.

Guide 06. Payroll and Release Pay

What it is for: Work out the payroll for a period, deduct cash advances, and then release the net pay to the employees.

Before you start: Make sure all production work for the period is recorded so the piece-rate pay is pulled correctly.

Steps for the Payroll Run

1. On the **People & Payroll** menu, click **Payroll Runs**.
2. Click **+ New Payroll Run**.
3. Pick the **Pay group** and the **Period**. The system will automatically show **Calculated pay** for everyone. Open **Earnings included** to see the attendance, piece work and other earnings used.

New payroll run

Which payroll?

Pay group * Period *

Weekly (piece rate) 2026-09-28 to 2026-10-03 · 1 person

Periods that have ended. A recorded one must be cancelled to redo it.

Pay worked out by the server

Employee	Gross	SSSPhilHealth	Pag-IBIG	Tax	Gov't loans	Cash advance	Net	
Practice Production Employee	P1,680.00	P250.00	P358.65	P33.60	P0.00	500.00	P537.75	Leave out
Total	P1,680.00						P537.75	

Manual lines (allowance, adjustment)

+ Add a line

Record Back

The new payroll run, with the pay worked out for each person · Owner-guide screenshot

4. If an employee is taking a cash advance deduction, open **Deductions and changes** and type the amount in the **Cash-advance deduction** box. Open **Add allowances or adjustments** only when needed; their included total appears in **Review pay**.
5. If you need to skip an employee for now, click **Leave out**. (You can put them back if you change your mind).
6. Click **Record**.

Steps for the Release

1. On the **People & Payroll** menu, click **Payroll Releases**.
2. Click **+ New Payroll Release**.
3. Pick the payroll run you just recorded.
4. Tick the checkbox next to the employees you are paying right now.

MOONPROJECT Server date: Saturday 3 October 2026 Search customers, JOs, numbers... + New Practice accountant ▼

Release net pay

Which payroll?

PAY-000007 · Semi-monthly (monthly staff) · 6,600.00 to 2026-08-16 to 2026-08-31 release

Who is paid now?

☒ Practice Office Employee ₱6,600.00

Where did the money come from?

Cash on hand (main cash box) Petty cash fund Checks on hand (undeposited customer checks)

Practice counter till Cash in bank – BDO Cash in bank – China Bank

Practice bank E-wallet – GCash

6600.00 GCash or bank reference, o

So far

₱6,600.00

1 person; paid out ₱6,600.00

This will pay ₱6,600.00 of net pay to 1 employee for PAY-000007 (2026-08-16 to 2026-08-31), from Cash on hand (main cash box).

The release net pay form, with the people being paid · Owner-guide screenshot

5. Click **Record**.

What the system does for you

It automatically calculates SSS, PhilHealth, Pag-IBIG, and tax (if applicable). It pulls the piece-work pay directly from the production records, so you never have to type it twice. When you release the pay, it updates the cash balances automatically.

Common mistakes and how to fix them

- **Mistake:** You realized the piece work was wrong after recording the payroll run.
- **Fix:** Never delete the record. First, cancel any releases you made for that run. Then, view the payroll run and cancel it. Fix the production records, and then make a new payroll run.

Guide 22. Cash Advances

What it is for: Give cash advances to employees, set how much is deducted per payroll, record if they pay back in cash, and write off balances if needed. You can also view what each employee still owes.

Before you start: Know exactly who the employee is, the amount they are getting or paying back, and for write-offs, the reason and expense account to charge it to. Only those with permission (like accountants) can record a write-off.

Steps

To give an advance:

1. On the **People & Payroll** menu, click **Cash advances owed**.
2. Click the name of the **Employee**.

An employee's cash advances, with Pay back, Write off and Give an advance · Owner-guide screenshot

3. Click **Give an advance**.
4. Choose the employee and the cash place where the money came from.
5. Type the **Amount** and the amount **Deducted each payroll**.
6. Click **Record**.

To record a payback in cash:

1. On the **People & Payroll** menu, click **Cash advances owed**.

2. Click the name of the **Employee**.
3. Click **Pay back**.
4. Choose the employee and the cash place where the money went.
5. Type the **Amount** they paid.
6. Click **Record**.

To write off a balance:

1. On the **People & Payroll** menu, click **Cash advances owed**.
2. Click the name of the **Employee**.
3. Click **Write off**.
4. Choose the employee and leave the amount blank to write off all that is owed, or type a specific amount.
5. Choose the expense account to **Charge to** (usually 6990 Miscellaneous, or salaries if treated as pay).
6. Type why it is written off.
7. Click **Write off**.

What the system does for you

It keeps track of the running balance each employee owes on cash advances. The payroll automatically deducts the amount per payroll you set until the advance is fully paid, showing the deductions clearly on their payslips. When you write off an advance, the system warns you that a forgiven cash advance counts as the employee's taxable pay for the year. It also keeps a clear history of "Advances still open" and "Paid back and written off".

Common mistakes and how to fix them

- **Mistake:** You recorded a cash advance with the wrong amount or deduction per payroll.
- **Fix:** Do not try to delete it, as records cannot be deleted. Instead, open the cash advance, edit it to the correct amounts, and provide a reason. The system will cancel the wrong record and issue a correct one.

Guide 23. 13th-Month Pay

What it is for: Work out and record the 13th-month pay, which must be given to employees on or before 24 December, and release the net pay.

Before you start: Make sure all payroll runs for the year up to the cut-off are recorded.

Steps for the 13th-Month Pay

1. On the **People & Payroll** menu, click **13th-Month Pay**.
2. Click **+ New 13th-Month Pay**.
3. Pick the **Pay group** and the **Year**. The system will automatically work it out.

New 13th-month pay

Which pay group and year?

Pay group * Semi-monthly (monthly staff) ▼ Year * 2026 ▼
Last year only early in January, for pay not made by 24 December.

For The whole pay group ▼
On separation, after the final pay: one employee who left, alone.

13th month worked out by the server

Employee	Basic pay	One twelfth	Accrued	Paid	Tax	Net	
Practice Office Employee	₱22,500.00	₱1,875.00	₱1,875.00	1875.00	₱0.00	₱1,875.00	Leave out
Total				₱1,875.00		₱1,875.00	

Basic pay counts days worked, paid leave, salary less absences and piece work; not holiday pay, premiums, overtime or allowances. Tax is withheld only on the part of the year's 13th-month pay above ₱90,000. The difference between what is paid and what was accrued goes to 13th month and benefits.

Record **Back**

The new 13th-month pay form, with the pay worked out · Owner-guide screenshot

4. Check each employee's **To pay now** amount. Open **Calculation and deductions** to compare **One twelfth** with **Accrued** and see the tax deduction.
5. If you need to change an amount, open **Change this amount** and type it in **13th-month amount** and type a reason in the **Why the amount is changed** box. For 2026 only, pay before the shop started using Moonproject is not in its payroll runs. You must change each employee's amount to the full 13th-month pay and add a note such as "includes pay before Moonproject".
6. To skip someone, click **Leave out** and type a reason in the **Why (their runs stay for a later 13th-month pay)** box. (You can put them back by clicking **Put back**).
7. If you change your mind about an amount, click **Use one twelfth**.

8. Click **Record**.

Steps for the Release

1. View the recorded 13th-month pay.
2. Click **Release net pay**.
3. Tick the checkbox next to the employees you are paying right now.
4. Click **Record**.

What the system does for you

It calculates one twelfth of each employee's basic pay from the recorded payroll runs for the year. It checks what was accrued in previous payrolls. Tax is withheld only on the part of the year's 13th-month pay above ₱90,000. When you release the pay, it updates the cash balances automatically.

Common mistakes and how to fix them

- **Mistake:** You realized an amount was wrong after recording the 13th-month pay.
- **Fix:** Never delete the record. First, cancel any releases you made for that run. Then, view the 13th-month pay and cancel it. Work it out again by making a new 13th-month pay.

Guide 52. Leave balances

What it is for: View the yearly service incentive leave (SIL) balances for everyone who was in service during a selected year. Service incentive leave is five days of paid leave given to an employee who has worked for at least one year.

Before you start: You will need to know which year you want to check the leave balances for.

Steps

1. On the **People & Payroll** menu, click **Leave balances**.

Leave balances

Service incentive leave (SIL) for employees in service during the year.

Year

2026

Download CSV

Print

Code	Employee	In service	SIL earned	Days used	Paid in cash	Left
EMP-0001	Practice Office Employee	2026-08-03 onward	0	0	0	0
EMP-0002	Practice Production Employee	2026-08-03 onward	0	0	0	0
Total			0	0	0	0

The Leave balances screen · Owner-guide screenshot

2. Type the **Year** you want to view (it opens on this year). The list changes by itself. Click an employee's **Code** to open their record.

What the system does for you

It calculates and shows the SIL balances for all employees who were in service during the year you picked. The list has these columns:

- **Code:** The employee's code.
- **Employee:** The name of the employee.
- **In service:** The date the employee started, and the date they left (or "onward" if they are still with you).

- **SIL earned:** The leave days for the year (5), once the employee has a year of service. It shows 0 before that.
- **Days used:** The days marked **Leave (SIL)** in the attendance grid for that year.
- **Paid in cash:** The unused leave days a recorded payroll run paid in cash.
- **Left:** The leave days remaining.

A **Total** line at the bottom adds up each column.

You can click **Download CSV** to save the list to your computer, or click **Print** to print it. If you open an employee's own page, you will see the same figures under **Paid leave (SIL)** for the year. No pay amounts are shown on this list.

Common mistakes and how to fix them

- **Mistake:** You cannot find an employee in the list.
- **Fix:** Check that the employee was in service during the **Year** you picked. Someone who started after that year, or left before it, is not listed. If nobody was in service, the screen says so.

Guide 24. Government loans

What it is for: Register an employee's SSS or Pag-IBIG loan so payroll can deduct it once a month and pay it with the monthly contributions.

Before you start: Get the loan statement from the agency. You need the loan number, the monthly deduction, and the first and last month.

Steps to register a loan

1. On the **People & Payroll** menu, click **Government loans**.

MOONPROJECT Server date: Saturday 3 October 2026 Search customers, JOs, numbers... + New Practice accountant ▼

Government loans

SSS and Pag-IBIG loans deducted from pay once a month, on the first payroll whose period ends on or after the 16th, and paid with that month's contributions.

Loans

☐ Show ended and stopped loans too

No government loans.

Register a loan

From the agency's loan statement. For a loan already running, the first month is the next one payroll deducts.

Employee * Loan * Loan number *

Pick the employee SSS salary loan

Monthly amortization * First month deducted * Last month deducted *

0.00

Note (optional)

Register loan

The Government loans screen with the Register a loan form · Owner-guide screenshot

2. Under the **Loans** panel, fill in the **Register a loan** form.
3. Pick the **Employee** and the **Loan** kind (like SSS Salary or Pag-IBIG Multi-Purpose).
4. Type the **Loan number** and the **Monthly deduction**.
5. Pick the **First month deducted** and the **Last month deducted**. (For a loan already running, the first month is the next one payroll deducts).
6. Click **Register loan**.

Steps to stop a loan early

1. On the **Government loans** page, find the loan.
2. Click **Stop**.

3. Pick the month in **No deduction from**.
4. Type a **Reason** (at least 10 characters).
5. Click **Stop the loan**. The record is kept, but payroll deducts nothing from this month on.

What the system does for you

The system checks every payroll. On the first payroll whose period ends on or after the 16th of the month, it automatically deducts the monthly deduction. The payslip shows the loan deduction and what is left. When you record your government remittances, the system pays the month's contributions and loans together.

Common mistakes and how to fix them

- **Mistake:** You need to skip a deduction this month because the employee's pay is too low, or you need to deduct a different amount.
- **Fix:** Do not change the registered loan. When making the **New payroll run**, open **Deductions and changes** for the employee. Next to the loan deduction, type the new amount in the **Change (0 skips)** box, and type a reason in the **Why** note box. The system will use your amount for this run only.

Guide 21. Government Remittances

What it is for: See the monthly contributions and taxes you owe, and record when you pay the agencies.

Before you start: Complete the month's payrolls first. If you are recording a payment, you need the physical receipt or proof of payment from the agency.

Steps

1. On the **People & Payroll** menu, click **Government remittances**.

The screenshot shows the 'Government remittances' screen in Moonproject. The top navigation bar includes 'MOONPROJECT', the server date 'Saturday 3 October 2026', a search bar, and buttons for '+ New' and 'Practice accountant'. A left sidebar lists various menu items under 'OVERVIEW' and 'SALES'. The main content area is titled 'Government remittances' and explains that it shows monthly payroll obligations for SSS, PhilHealth, Pag-IBIG, and BIR (1601-C). It includes a section for 'Statutory exposure: months paid with no contribution recorded' with two tables for September 2026 and August 2026. Each table lists contributions for SSS, PhilHealth, Pag-IBIG, and Withholding tax, showing amounts recorded, remitted, and left to be paid, with links to 'Record payment' and 'Lists and 1601-C worksheet'.

2026-09				
For 2026-09	Payrolls recorded	Remitted	Left	
SSS	₱3,040.00	₱0.00	₱3,040.00	Record payment
PhilHealth	₱1,467.30	₱0.00	₱1,467.30	Record payment
Pag-IBIG	₱592.00	₱0.00	₱592.00	Record payment
Withholding tax (1601-C)	₱0.00	₱0.00	₱0.00	

[Lists and 1601-C worksheet for 2026-09](#)

2026-08				
For 2026-08	Payrolls recorded	Remitted	Left	
SSS	₱1,135.00	₱0.00	₱1,135.00	Record payment
PhilHealth	₱750.00	₱0.00	₱750.00	Record payment
Pag-IBIG	₱300.00	₱0.00	₱300.00	Record payment
Withholding tax (1601-C)	₱0.00	₱0.00	₱0.00	

[Lists and 1601-C worksheet for 2026-08](#)

The Government remittances screen, month by month · Owner-guide screenshot

2. Click **Lists and 1601-C worksheet for {month}** to see the details of a specific month.
3. This screen shows the **SSS contributions list**, **PhilHealth list**, **Pag-IBIG list**, and **1601-C worksheet**.
4. In those lists, the **Employee share** is the money you deducted from your employees' pay. The **Company share** is the extra money the business pays for them.
5. Pay the agency using their official channels.
6. To record that you paid, go back to the **Remittance check** panel or the main **Government remittances** screen, and click **Record payment**.
7. Under **What is paid?**, choose who you **Paid to** and check the **For the month**.
8. Under **Where did the money come from?**, choose the cash box or bank account you used.
9. Type the **Amount paid**. If you paid the exact amount owed, you can click **Pay all of it**.

10. If you paid a **Late-payment penalty**, type it in. This is separate from the regular amount.
11. Type the **PRN, reference or receipt no.** from your proof of payment.
12. If you are recording this days after you actually paid, fill in the **Date paid**.
13. Add a **Note** if needed.
14. Click **Record**.

What the system does for you

It calculates exactly how much you owe SSS, PhilHealth, Pag-IBIG and the BIR based on the payrolls you recorded. When you record a payment, it checks if you paid the right amount and deducts it from the money you owe. If you pay less than the total, it will spread the payment and keep the rest as payable.

Common mistakes and how to fix them

- **Mistake:** You remitted less than what the system says you owe.
- **Fix:** If you missed an employee or a payroll run, record that missing payroll first. If the payrolls were right but you just paid short, the system will warn you and keep the remaining balance as payable.
- **Mistake:** You remitted more than what the system says you owe.
- **Fix:** The system will stop you and show an error. Find the difference first. Usually, this means a payroll run is not recorded yet. Record the missing payroll, then try again. If there are extra amounts for other reasons, the accountant handles them.
- **Mistake:** You typed the wrong amount or chose the wrong cash place.
- **Fix:** You cannot change a recorded remittance. To fix it, you must cancel and redo it. Open the remittance, click **Cancel**, and then record a new one with the correct details.

Guide 34. Government upload files

What it is for: Download the monthly contribution list files to upload to the SSS, PhilHealth, and Pag-IBIG websites. View the exposure report to see past months where an employee was paid but no contribution was recorded.

Before you start: You will need the permission to download upload files and the permission to see ID numbers. You will need the employer number for each agency.

Steps

1. On the **People & Payroll** menu, click **Government remittances**.
2. Under each month the link reads **Lists and 1601-C worksheet for YYYY-MM** (like Lists and 1601-C worksheet for 2026-09). Click it.
3. On the month page, scroll down to the panel titled **Files for the agencies YYYY-MM** (like Files for the agencies 2026-09).

PhilHealth list 2026-09

Employee	PhilHealth PIN	Monthly basis	Employee share	Employer share	Total
Practice Office Employee (EMP-0001)	—	₱15,000.00	₱375.00	₱375.00	₱750.00
Practice Production Employee (EMP-0002)	—	₱14,345.83	₱358.65	₱358.65	₱717.30
Total					₱1,467.30

Pag-IBIG list 2026-09

Employee	Pag-IBIG MID Compensation	Employee share	Employer share	Total
Practice Office Employee (EMP-0001)	—	₱15,000.00	₱200.00	₱200.00
Practice Production Employee (EMP-0002)	—	₱4,800.00	₱96.00	₱96.00
Total				₱592.00

Files for the agencies 2026-09

One file for each agency, with the same employees and totals as the lists above. Upload it on the agency's website. Check the columns against the agency's current template first; loan amortizations are not in these files.

SSS SSS employer number not set. [Download SSS file](#)

R3 / e-collection contribution list: 2 employees, **Type the number** [Save](#)

PhilHealth PhilHealth employer number (PEN) not set. [Download PhilHealth file](#)

RF-1 / EPRS contribution list: 2 employees, **Type the number** [Save](#)

The Files for the agencies panel on a month's page · Owner-guide screenshot

4. If an employer number is missing (like "Pag-IBIG employer ID not set"), type it in the box under **Type the number** (or **Change the number** once one is saved) and click **Save**. You will need your password for this, and the box only shows if you have permission to manage the agency numbers.
5. Click **Download SSS file**, **Download PhilHealth file**, or **Download Pag-IBIG file** to get the file for that agency.
6. Go to each agency's website and upload the downloaded file. Follow their current website steps.

To view the exposure report:

1. On the **People & Payroll** menu, click **Missing past government contributions**.

The Missing past government contributions report · Owner-guide screenshot

What the system does for you

The system automatically creates the exact file formats each agency needs (the R3 / e-collection contribution list for SSS, RF-1 / EPRS contribution list for PhilHealth, and MCRF / eSRS contribution list for Pag-IBIG). It adds up the monthly compensation, employee share, and company share for every employee paid in that month.

The Missing past government contributions report lists all employees who were paid in a past month but have no contribution recorded. It shows the months, the compensation, what the shares should have been, and estimates the late penalty. The **Missing past government contributions** screen has a **By scheme** panel and a **By employee** panel, with the pay, the shares, months late and the penalty. It posts nothing. Open **Calculation limits and policy notes (statutory exposure)** for the estimates, limits and policy reference. You can print it by clicking the **Print** button.

Common mistakes and how to fix them

- **Mistake:** A button to download a file is disabled, or a whole section is missing.
- **Fix:** If the list of employees for an agency is empty for that month, the download button is disabled. If you cannot see the upload files section at all, you lack the permission to download files or view ID numbers. Ask the owner to grant these permissions.

- **Mistake:** The file is refused with a message that it was not made because employees have no ID number (like "The SSS file for 2026-09 was not made: no SSS number for..."), or because the employer number is missing.
- **Fix:** Moonproject refuses to make the file if information is missing. Add the ID number on the employee record, or type the missing employer number in the box, then download it again.

Money

Guide 07. Cash Accounts and Count

What it is for: Set up the cash boxes, bank accounts, and e-wallets you use, then count the actual bills and coins in a cash box to record the total.

Before you start: Know exactly what kind of account you are adding (cash box, bank, e-wallet) and the physical money you have.

Steps

1. On the **Money** menu, click **Cash Accounts**.

MOONPROJECT Server date: Saturday 3 October 2026 Search customers, JOs, numbers... + New Practice accountant ▼

Cash Accounts Add place

Place	Kind	Account number	Balance	
Cash on hand (main cash box) (1101)	Cash box	—	₱0.00	Cash book Settings

₱0.25		—

The new cash count form with bills and coins counted · Owner-guide screenshot

10. Add a **Note** if needed.

11. Click **Record** (or **Save draft** if you want to finish later).

What the system does for you

It safely stores your account details and calculates the current cash balance. When you record a count, it keeps a history of exactly how many of each bill or coin you had at that time, and calculates the total amount for you.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong quantity for a bill or coin.
- **Fix:** You cannot delete a recorded count. To fix a mistake, just cancel and redo it. You can open the count and choose to edit it, which will ask for a reason, cancel the old count, and let you record a new one with the correct quantities.

Guide 08. Cash Book

What it is for: View the daily movements of money in and out of a specific cash box, bank account, or e-wallet over a period of time, and see the running balance.

Before you start: You will need to know which cash place you want to look at and the date range you are interested in.

Steps

1. On the **Money** menu, click **Cash book**.
2. Under **Choose a cash place and dates**, pick the **Cash place** from the list.
3. Type the **From** and **To** dates.
4. Click **Show cash book**.

The screenshot shows the Moonproject interface. The top bar includes the logo, server date (Saturday 3 October 2026), a search bar, and a user profile. The left sidebar lists various menu items under 'OVERVIEW' and 'SALES'. The main content area is titled 'Cash book' and contains a form to 'Choose a cash place and dates'. The form has a dropdown for 'Cash place' (set to 'Practice counter till'), and date pickers for 'From' (09/04/2026) and 'To' (10/03/2026). A 'Show cash book' button is below the form. Below the form, the 'Cash book - Practice counter till' section shows the date range '2026-09-04 to 2026-10-03' and an 'Opening balance ₱4,100.00'. A table lists transactions with columns for Date, Document, Details, Money in, Money out, and Balance.

Date	Document	Details	Money in	Money out	Balance
2026-09-04	COL-000004	COL-000004: Collection from Practice Customer 2, CR 10004	₱2,500.00	—	₱6,600.00
2026-09-04	COL-000005	COL-000005: Collection from Practice Customer 2, CR 10005	₱2,500.00	—	₱9,100.00
2026-09-04	COL-000006	COL-000006: Collection from Practice Customer 2, CR 90002	₱350.00	—	₱9,450.00
2026-09-04	TRF-000002	TRF-000002: Transfer Practice counter till to Practice bank	—	₱1,000.00	₱8,450.00

The cash book of one cash place, with its movements · Owner-guide screenshot

What the system does for you

It calculates the opening balance at the start of your chosen dates. Then, it lists every document (like collections, payments, or counts) that moved money in or out during that time, showing a running balance after each one. It finishes with the closing balance. You can click on the document numbers to see the original record. You can also print the cash book by clicking the **Print** button.

Common mistakes and how to fix them

- **Mistake:** You cannot see the cash place you want to look at in the list.
- **Fix:** Check that the place exists and is active. Encoders now have the accountant's access to balances by default. If a place is still missing, ask the owner to check your permissions on **Roles and permissions**.

Guide 32. Bank reconciliation

What it is for: Check that your bank accounts in the system match your real bank statements. You do this each month, per bank account, from the bank statement.

Before you start: You will need the printed or downloaded bank statement for the month you want to reconcile.

Steps

1. On the **Money** menu, click **Bank reconciliation**.
2. Under **Start a reconciliation**, pick the **Bank account** from the list.
3. Type the **Statement date** (the last day on the statement) and the **Statement ending balance** exactly as printed.

The screenshot shows the Moonproject software interface for bank reconciliation. The top header includes the Moonproject logo, server date (Saturday 3 October 2026), a search bar, and a '+ New' button. The left sidebar lists navigation options under 'OVERVIEW' (Home, Notifications, Calendar) and 'SALES' (Post-dated checks, Customers, Price list, Customer emails, Collection Receipts, Customer Refunds, Deposit Transfers, 2307s Received, Deposit Forfeits, Credit Memos, Bad Debt Write-offs, Allowance for Credit Losses, Job Orders, Release Slips, Invoice Records, Opening Job Orders, Invoice Records, Quick Sales). The main content area is titled 'Bank reconciliation' and features a 'Start a reconciliation' section. This section has three input fields: 'Bank account' (set to 'Practice bank'), 'Statement date' (set to '10/03/2026'), and 'Statement ending balance' (set to '75000.00'). Below these fields is a 'Start' button. A note indicates 'The books are counted to the end of 2026-10 (2026-10-31)'. Below the 'Start' button is a 'Past reconciliations' section which states 'No bank has been reconciled yet.'

The Bank reconciliation screen, ready to start · Owner-guide screenshot

4. Click **Start**.
5. Under **Cash book items: tick what cleared the bank**, look at your real statement and tick the box for every item that cleared the bank.
6. Click **Save ticks**. You must save your ticks before you can finish.
7. Click **Finish**. This button stays off until the ticks are saved, every statement line is matched, and the **Difference (must be zero to finish)** is zero. The screen lists what is missing after "To finish:".

What the system does for you

The system helps you find missing money or mistakes. It takes the **Book balance at [date]**, then takes out **Less deposits in transit (in the books, not on the statement)** (money you received but the bank has not cleared yet), and adds back **Add outstanding payments (paid in the books, not cleared)** (checks you gave out but were not cashed yet) to find the **Books adjusted to the statement**. This must equal the **Statement ending balance**.

If you have permission to record them, you will see a **Record a bank adjustment** button. You can click it to record a **Bank charge** or **Interest earned** that is not in your books yet. The system checks that the **Difference (must be zero to finish)** is exactly zero before it lets you finish. Past reconciliations are kept safe under **Past reconciliations**. Clicking **Finish** locks the month. An accountant can unlock the bank's latest finished month with **Reopen**: it asks why, keeps the reason, and the month must be finished again.

Common mistakes and how to fix them

- **Mistake:** The **Difference (must be zero to finish)** is not zero, but you already ticked everything on the statement.
- **Fix:** You might be missing a bank charge or interest. Click **Record a bank adjustment** to add it. You might have also typed the wrong amount on a collection or payment. If you made a mistake on a document, you must cancel and redo it with the correct amount. You cannot delete documents.
- **Mistake:** You want to change a past reconciliation.
- **Fix:** Ask the accountant. Open the bank's latest finished month, click **Reopen**, type why, and click **Reopen** again. Change what is needed and click **Finish** again. Only the latest month of a bank reopens.

Guide 36. Fixed assets, loans and owners

What it is for: See your fixed assets (like equipment), your loans, and the people who own or run the business. Check asset values and depreciation, track late loan payments, and record money moving between the company and its owners or officers.

Before you start: You will need to know which list you want to look at. For making changes, know the asset you are depreciating or throwing away, the loan you are paying, or the owner/officer bringing in or taking out money.

Steps

1. On the **Money** menu, click **Fixed assets, Loans, or Owners and officers**.
2. **For fixed assets:**
 - You can see the list of assets with their cost, accumulated depreciation so far, and book value.

Fixed assets

Run depreciation Record a purchase

On the books: 1 asset · cost ₱20,000.00 · accumulated depreciation ₱0.00 · book value ₱20,000.00

Search number, description or class Every status ▼

Asset	Class	Bought	Cost	Accumulated depreciation	Book value	Status
FA-000001 Practice sewing machine (made up)	Machinery and production equipment	2026-10-03	₱20,000.00	₱0.00	₱20,000.00	In service

The Fixed assets screen · Owner-guide screenshot

- Click **Run depreciation** to record the monthly wear and tear. Choose the **Month to depreciate** and click **Record the run**. The system will warn you if a month was missed.
- To look closer, click an asset. Run the month's depreciation before taking it off the books. Click **Dispose of this asset**, choose **Sold** or **Retired**, and type in **Why is it being taken off?**. For **Sold**, follow guide 46 for the sale details. For **Retired**, nothing is received and the book value left is charged as a loss. Review the details, then click **Record the disposal**.

3. For loans:

- You will see your loans and what is late.
- Click a loan to see its schedule, payments made, and any late instalments.
- If you have permission to record them, click **Record a loan** to add a new one, or **Record a payment** to pay one down.

4. For owners and officers:

- You will see the list of stockholders and officers. If you have permission to view balances, you will see what they owe the company, and what the company owes them.

The Owners and officers screen · Owner-guide screenshot

- Click a person to see **What is due**, their **Owner money**, **Officer money out and back**, and the **Officer ledger**.
- If you have permission to record them, click **Record owner money** for owner investments, or **Record officer money out or back** when an officer takes out money or brings it back.

What the system does for you

It keeps all these records organized and does the math for you. It tracks the exact book value of assets month by month and alerts you if you forget to run the depreciation (the warning shows on the **Fixed assets** list). Late instalments are worked out as of the server's date when you open **Loans** or a loan. If you pay less than an instalment, it is not marked paid: the rest stays due on that instalment (and shows as late once past its due date), and the next payment on it starts from what is left. For owners and officers, it adds up all the money brought in and taken out so you always know exactly who owes what.

Common mistakes and how to fix them

- **Mistake:** You clicked the wrong month to run depreciation or typed the wrong amount for a loan payment.
- **Fix:** Do not try to delete the record. Instead, find the wrong record, cancel it, and then redo the steps to record it correctly.
- **Mistake:** You want to sell an asset but chose **Retired**.
- **Fix:** Choose **Sold** and follow guide 46. Run the month's depreciation first.

A short loan payment stays owed

What it is for: Record what was actually paid when it is less than the instalment.

Before you start: Have the lender's statement showing the principal and interest paid.

Steps:

1. Open **Money > Loans**, open the loan and click **Record a payment**.
2. Check the instalment offered and choose **Where did the money come from?**.
3. Tick **The amount or split differs (a part payment, or the lender applied it differently)** if needed, then enter **Principal**, **Interest** and **Why is it different?**.
4. Click **Record**, read the confirmation and click **Record** again.

What the system does: Only the amount paid reduces the debt. The unpaid rest remains on that instalment, stays on the late list after its due date, and is offered for the next payment.

Common mistakes: A short payment is not a settlement. Record the rest when paid. Do not use forgiveness unless the lender actually forgave it.

Loan Forgiveness

What it is for: Close the unpaid rest of an instalment when the lender forgives it.

Before you start: Keep the lender's confirmation. Owners, accountants and encoders have permission by default. Nothing is forgiven automatically.

Steps:

1. Open **Money > Loans**, then the loan.
2. On the schedule or **Late** list, click **Forgive the rest** beside the first unsettled instalment.
3. Read **Principal**, **Interest** and **Amount forgiven**. These are read-only: all the rest is forgiven, never more.
4. Fill **Why did the lender forgive it? (10 to 200 characters)** and, if useful, **Note** with where the letter is kept.
5. Click **Record**, check the confirmation, then click **Record** again.

What the system does: It records a Loan Forgiveness with an LFGV number. Forgiven principal lowers the loan and is booked as a gain on debt forgiveness. Forgiven interest posts nothing because interest is expensed only when paid. The instalment shows as forgiven, leaves the late list, and the next due moves

on.

Common mistakes: Open a mistaken forgiveness document and use **Cancel**, give a reason and click **Cancel document**. Its reversal reopens the instalment. Cancel the forgiveness before cancelling the short payment it depended on. A fully paid or already forgiven instalment cannot be forgiven again.

Guide 46. Selling a fixed asset

What it is for: Record taking a fixed asset off the books when you sell it to a buyer or retire it. For **Retired**, nothing is received for it: the book value left is charged as a loss.

Before you start: Run the month's depreciation first, so the book value is up to date. You will need to know if it is being sold or retired. If sold, it must be paid in full now; a bank transfer counts. You need the invoice from the booklet, what the buyer paid (VAT included), where the money went, and the buyer's details.

Steps

1. On the **Money** menu, click **Fixed assets**.
2. Find the asset in the list and click on its number.
3. Click the **Dispose of this asset** button to open the "Take <asset> off the books" dialog.

MOONPROJECT Server date: Saturday 3 October 2026 Search customers, JOs, numbers... + New Practice accountant ▼

Take FA-000001 Practice sewing machine (made up) off the books

Retired **Sold**

Record the sale from the invoice written for it. Run the month's depreciation first, so the book value is up to date.

Why is it being taken off? *

Invoice number (from the booklet) *

The invoice written for this sale; a number is used once, ever.

Price, VAT included * 0.00

Paid in full now; a bank transfer counts.

Cash on hand (main cash box) ₱0.00	Petty cash fund ₱0.00	Checks on hand (undeposited customer checks) ₱0.00
Practice counter till ₱90,629.65	Cash in bank – BDO ₱0.00	Cash in bank – China Bank ₱0.00

The box for taking an asset off the books · Owner-guide screenshot

4. Choose **Sold** or **Retired**.
5. Type **Why is it being taken off?**.
6. If sold, type the **Invoice number (from the booklet)** and the **Price, VAT included**. Pick **Where did the buyer's money go?** and the **Buyer** (or type the **Buyer's name**, **Buyer's TIN** and **Buyer's address**).
7. If **Sold**, check the figures shown in the panels before saving. If **Retired**, nothing is shown but the loss in the summary. Click **Record the disposal**.

What the system does for you

For a sale, before saving, it calculates and shows the **Book value and gain or loss** to tell you the **Gain on the sale** or **Loss on the sale** (if you sold it for more or less than its book value). It also shows **Write these on the booklet** with the **VATable sales**, **VAT**, and **Total**, so you can write these on the booklet.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong price or picked the wrong buyer.
- **Fix:** You cannot change a disposal once recorded. Go to the asset and click the disposal document number. Click **Cancel**, give a reason, and click **Cancel document**. The document stays on file, marked Cancelled, and everything it recorded is reversed with today's date. Then, redo the disposal with the correct details.

Guide 51. Depreciation run and retiring an asset

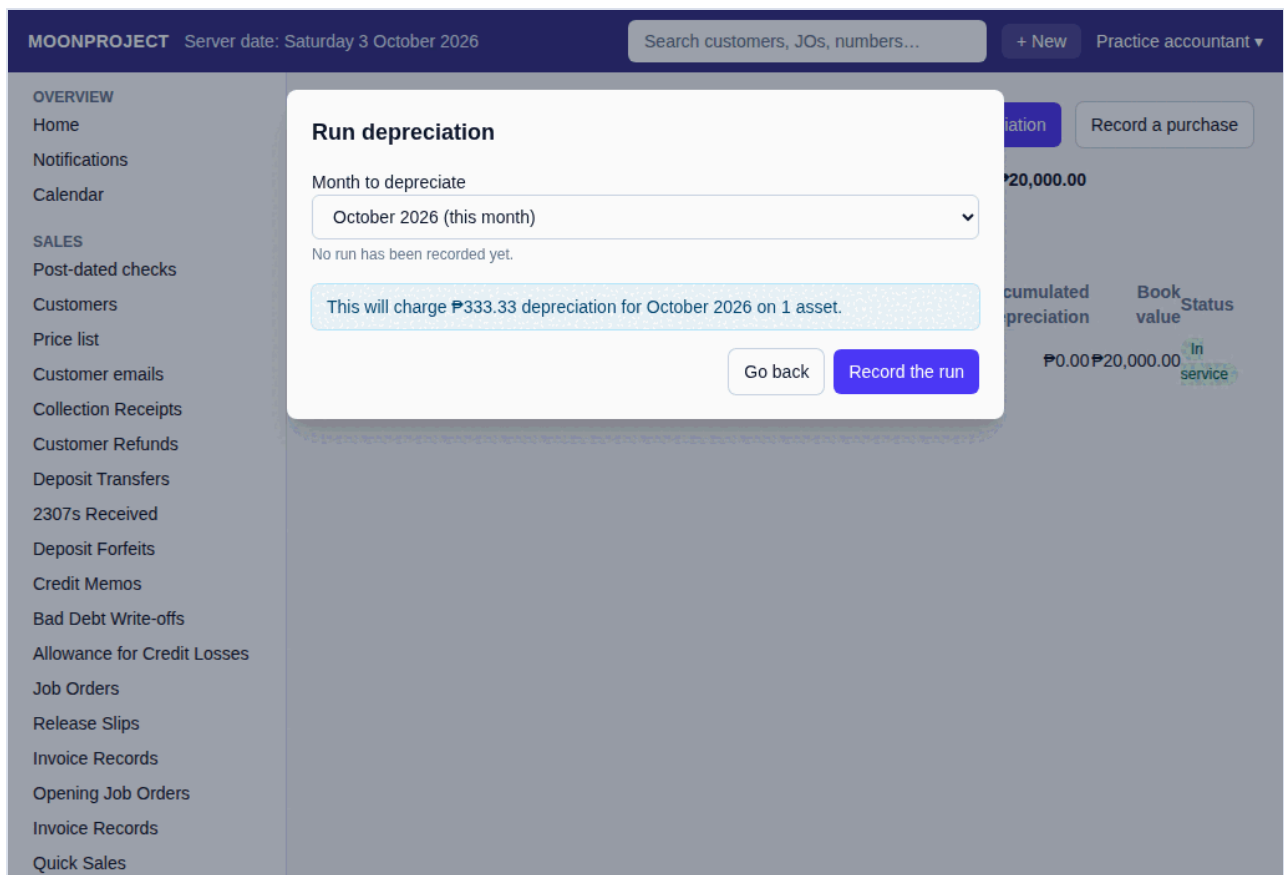

What it is for: Run the depreciation for a month so that the cost of your fixed assets is charged over time, or record taking a fixed asset off the books when it is thrown away or lost. If you are selling an asset instead, that is a different screen (see Guide 46).

Before you start: Know the month you need to run depreciation for. Runs go month by month. A run for an earlier month is dated on the last day of its month, but a run for this month is dated today. For retiring an asset, you will need to know which asset it is and why it is being taken off.

Steps

To run depreciation:

1. On the **Money** menu, click **Fixed assets**. (You can also do this from an individual asset's page. The **Run depreciation** button only shows if you have permission to record runs.)
2. Click the **Run depreciation** button to open the "Run depreciation" dialog.

The Run depreciation box · Owner-guide screenshot

3. Pick the **Month to depreciate**. The system will help by showing a hint like "The latest run so far is <month>. Runs go month by month." or "No run has been recorded yet."
4. Check the summary shown on the screen and click **Record the run**.

To retire an asset:

1. On the **Money** menu, click **Fixed assets**.

2. Find the asset in the list and click on its number.
3. Click the **Dispose of this asset** button to open the "Take <asset> off the books" dialog.
4. Choose **Retired**.
5. Type **Why is it being taken off?**.
6. Read the summary shown on the screen and click **Record the disposal**.

What the system does for you

For a depreciation run, it calculates the charge for each asset that is in service during that month, updates their book values, and adds the run to the asset register. For retiring an asset, because nothing is received for it, the book value left is charged as a loss.

Common mistakes and how to fix them

- **Mistake:** You missed a month and the system shows a yellow warning: "No depreciation was recorded for... Run the months from the oldest, so each month's charge falls in its own books."
- **Fix:** Pick the oldest missed month in the **Month to depreciate** list and record it. Repeat this until you catch up to the current month. If you recorded a run by mistake, go to the asset, click the depreciation run document number, click **Cancel**, give a reason, and click **Cancel document**. This reverses the charge.

Guide 60. Dividends

What it is for: Declare a cash dividend and pay the money to the stockholders.

Before you start: Have the board resolution for the dividend. Know the record date (the stockholders on the books at the end of that day get the dividend) and either the amount per share or the total amount. The shares of each stockholder must be in the register (**Owners and officers** on the **Money** menu).

Steps

To declare a dividend:

1. On the **Money** menu, click **Dividend Declarations**.
2. Click **+ New Dividend Declaration**.

The screenshot shows the 'New Dividend Declaration' form in the Moonproject application. The interface has a dark blue header with the Moonproject logo, server date (Saturday 3 October 2026), a search bar, and buttons for '+ New' and 'Practice accountant'. A sidebar on the left lists various menu items under 'OVERVIEW' and 'SALES'. The main content area is titled 'New Dividend Declaration' and contains a 'Details' section with the following fields:

- Resolution number ***: A text input field.
- Resolution date ***: A date picker showing 'mm/dd/yyyy'.
- Record date ***: A date picker showing 'mm/dd/yyyy'.
- Basis ***: A dropdown menu.
- Amount ***: A text input field with a value of '0.00'.
- Note**: A text area for additional information.

At the bottom of the form are three buttons: 'Record' (highlighted in blue), 'Save draft', and 'Back'. To the right of the form is a 'So far' section with the text 'Fill in the required fields to see the total.'.

The new dividend declaration form · Owner-guide screenshot

3. Type the **Resolution number**, and pick the **Resolution date** and the **Record date**. The record date must be today or earlier.
4. Pick the **Basis**: **per_share** (an amount for each share) or **total** (the whole dividend).
5. Type the **Amount**.
6. Type a **Note** if you want.
7. Click **Record**. Read the box **Record this Dividend Declaration?**, then click **Record** again. Click **Go back** if something is wrong.

To pay a stockholder:

1. On the **Money** menu, click **Dividend Payments**.
2. Click **+ New Dividend Payment**.
3. Under **Which stockholder was paid?**, pick the stockholder from the list.
4. Under **Where did the money come from?**, click the cash place.
5. Type the **Amount paid (the dividend less the final tax withheld)**.
6. Type a **Note** if you want, like the check number or bank reference.
7. Click **Record**. Read the box **Record this Dividend Payment?**, then click **Record** again.

What the system does for you

When you declare a dividend, it splits the amount by the shares each stockholder held at the end of the record date. For an individual stockholder, it withholds the final tax (10% unless the accountant changed it in **Settings**) and records the rest as owed to them. The box before you record reads like: "This will declare a cash dividend of [amount] (board resolution [number]) ... to [number] stockholders of record on [date]". When you record a payment, it takes the money from the cash place and lowers what the company owes that stockholder. The box reads like: "This will record [amount] of dividends paid to [name] from [cash place]."

Common mistakes and how to fix them

- **Mistake:** You see "Retained earnings on [date] are [amount] ... This dividend of [amount] would leave [amount]."
- **Fix:** The dividend is more than the retained earnings left. Declare a smaller amount.
- **Mistake:** You see "The record date [date] has not ended, so who holds the shares is not known yet."
- **Fix:** Wait until the day after the record date, then record the declaration.
- **Mistake:** You see "[name] has no TIN in the register: the 1601-FQ and the 1604-F need it."
- **Fix:** It is only a warning. Have the TIN added to the register of stockholders before you file those returns.
- **Mistake:** You see "The company owes [name] only [amount] in dividends."
- **Fix:** You typed more than is owed. Type the amount less the final tax withheld.
- **Mistake:** You recorded it wrongly.
- **Fix:** You cannot delete it. Open it and click **Edit** to record a corrected one, or click **Cancel**, type a reason, and click **Cancel document**.

Transfers, asset purchases, loans and owner money

What it is for: Record money movements from their actual supporting papers.

Before you start: Ask the accountant to check whether money is a cost, a loan, capital or an advance. Know which cash place was used.

Steps:

1. For a transfer, open **Money > Fund Transfers**, then **+ New Fund Transfer**. Pick the sending and receiving places, enter the amounts sent and received, and add a note. The difference is the fee. Click **Record**, review, then **Record** again.
2. For new equipment, open **Fixed assets** and **Record a purchase**. Choose **Kind of asset**, fill **Description**, supplier invoice details, **Invoice total (VAT included)**, **Residual value** and **Useful life in months**. Split how it is paid now, owed to the supplier or financed. Choose the cash place and lender when asked. Check the preview and **Record**.
3. For borrowing, open **Loans > Record a loan**. Fill **Lender**, **Loan or promissory note no.**, proceeds destination, **Loan amount (principal)**, fees, interest, term and schedule. For financed equipment select its **Asset purchase**. Check the schedule against the lender's paper and **Record**.
4. For an instalment open the loan and **Record a payment**. Check principal, interest and cash place against the actual payment. **Record** only what was paid. The rest stays owed; guide 36 covers short payments and forgiveness.
5. For an owner investment, open **Owners and officers**, open the person and **Record owner money**. Pick **What is it?** as agreed with the accountant, the cash place and amount, and **Record**.
6. For an officer taking or returning money, use **Record officer money out or back** on that person's page. Choose **In or out?**, the amount, cash place and **What was it for?**. Review and **Record**.

What the system does: It records the movement once and updates the balances. Asset cost is charged over time through depreciation; loan principal is money owed, not an expense. Owner advances are different from share capital.

Common mistakes: Do not also enter the same equipment as an expense or the same loan receipt as sales. If the preview does not describe the real event, go back and have the accountant check it.

Purchases and Expenses

Guide 30. Suppliers and Purchase Orders

What it is for: Add the people and companies you buy from, keep a list of the supplies you buy, make purchase orders to ask for goods, and record when those goods arrive.

Before you start: Have the supplier's details ready, like their TIN and whether they are VAT-registered. You need to add the supplies they sell to the system before you can make an order.

Steps

To add or change a supplier:

1. On the **Purchases & Expenses** menu, click **Suppliers**.

The screenshot shows the Moonproject interface. At the top, there's a header with 'MOONPROJECT', 'Server date: Saturday 3 October 2026', a search bar, and a '+ New' button. The left sidebar has a menu with 'OVERVIEW' (Home, Notifications, Calendar), 'SALES' (Post-dated checks, Customers, Price list, Collection Receipts, Customer Refunds, Deposit Transfers, 2307s Received, Deposit Forfeits, Credit Memos, Bad Debt Write-offs, Allowance for Credit Losses, Job Orders, Release Slips, Invoice Records, Quick Sales, Quotations), and 'PRODUCTION'. The main content area is titled 'Suppliers' and features a search bar and a dropdown menu set to 'Active'. Below this is a table of suppliers.

Name	Registered name	TIN	VAT	Usual EWT	Terms	Status
Practice Fabric Supplier	Practice Fabric Supplier (Fictional)	000-000-001-000	VAT	None	30 days	Active
Practice Utilities	Practice Utilities (Fictional)	000-000-002-000	Non-VAT	None		Active

The list of suppliers · Owner-guide screenshot

2. Click **+ New supplier** to add one, or click a supplier's name to see their **Details**.
3. Type their **Name (as staff call it)** and **Registered name**.
4. Type their **TIN** and check the **VAT-registered** box if they are.
5. Pick their **Usual tax withheld from supplier (EWT)** if you need to withhold tax from them.
6. Type their **Payment terms (days)** to know when their bills are due.
7. Click **Add supplier** or **Save changes**.

To add or change supplier contacts:

1. Open a supplier from the **Suppliers** list.
2. Go down to **Contacts**.
3. Fill in the name, role, phone, and email, then click **Add contact**.

To keep your supplies list:

1. On the **Purchases & Expenses** menu, click **Supplies**.
2. Click **+ New supply** to add a new item you buy.
3. Fill in the details, then save it. You can also click **Change** on a supply to fix its details.

To make a purchase order:

1. On the **Purchases & Expenses** menu, click **Purchase Orders**.
2. Click **+ New Purchase Order**.

New purchase order

Who are we ordering from?

Practice Fabric Supplier ▼
VAT-registered · TIN 000-000-001-000 · pays in 30 days

Expected date 10/03/2026 📅
When the goods should arrive. Optional; it cannot be in the past.

What are we ordering?

Supply	Quantity	Cost of one unit	Line total
▼	2	100.00	P200.00

+ Add a line

Record **Back**

So far
P200.00
This will issue a purchase order to Practice Fabric Supplier for 1 supply line(s) totaling P200.00.

The new purchase order form · Owner-guide screenshot

3. Under **Who are we ordering from?**, pick the supplier and an **Expected date**.
4. Under **What are we ordering?**, pick the supply, and type the **Quantity** and the **Cost of one unit**.
5. Click **Record**. Check what the app shows, then click **Record** again.

To receive goods against a purchase order:

1. On the **Purchases & Expenses** menu, click **Receiving Reports**.

2. Click **+ New Receiving Report**.
3. Under **Which order did the goods come for?**, pick the open order.
4. Under **What came?**, look at the lines. The system shows what was ordered and what is still to receive.
5. Type what arrived in **Receiving now**. If everything arrived, click **Receive everything that is left**. You can receive part of the order now and the rest later in another report.
6. Click **Record**. Check what the app shows, then click **Record** again.
7. *Note: When the bill arrives, record it following the [Bills and Expenses](#) guide.*

What the system does for you

It keeps your list of suppliers and what you buy from them. It tracks what you ordered and helps you see what is still missing when goods arrive. When the bill comes and you record it, the system uses the supplier's TIN, VAT, and usual EWT to work out the taxes for you.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong quantity or cost on an order or report.
- **Fix:** You cannot delete recorded documents. Open the document and click **Edit**. The system will ask for a reason, cancel the old one, and record the replacement.

Guide 13. Bills and Expenses

What it is for: Record a bill from a supplier, pay it later, or record an expense paid right away.

Before you start: Know who you are paying and have the invoice or receipt ready. The supplier must already be on file.

Steps

To record a supplier bill:

1. On the **Purchases & Expenses** menu, click **Supplier Bills**.
2. Click **+ New Supplier Bill**.
3. Pick the supplier.
4. Type the **Invoice no. (on the supplier's invoice)** and pick the **Invoice date**.
5. Pick what it is **For** and type a **Description**.
6. Type the **Amount (VAT included)**.

Invoice no. (on the supplier's invoice) * 1001

Invoice date * 10/03/2026

The date printed on the invoice; the due date follows the supplier's terms.

What is it for?

For	Description	Amount (VAT included)
Practice ▼	Practice enti	100.00

+ Add a line

VAT is worked out from the invoice total when the supplier is VAT-registered and has a TIN on file.

Withholding tax (EWT)

Usual: No EWT ▼

Only the accountant changes the EWT from the supplier's usual class.

So far

₱100.00

Input VAT	₱10.71
EWT withheld	₱0.00
Owed to the supplier, due 2026-11-02	₱100.00
Advances applied	₱100.00
Still owed after the advances	₱0.00

This will record ₱100.00 billed by Practice Fabric Supplier on invoice no. 1001 of 2026-10-03 with ₱10.71 input VAT; ₱100.00 of SADV-000001 is applied, so ₱0.00 is still owed, due 2026-11-02.

The new supplier bill form · Owner-guide screenshot

7. Click **+ Add a line** if there are more items, or **Remove** to delete one.
8. The **Tax withheld from supplier (EWT)** is set to the supplier's usual class, and users with permission to change EWT can change it. Owners, accountants and encoders have this access by default; follow the accountant's instructions.

9. Add a **Note** if needed.
10. Click **Record**. Check what the app shows in **Record this Supplier Bill?**, then click **Record** again.

To pay supplier bills:

1. On the **Purchases & Expenses** menu, click **Supplier Payments**.
2. Click **+ New Supplier Payment**.
3. Pick the supplier.
4. Under **Pay now**, type the amount to pay for each bill, or click **Pay remaining** to fill in the amount still owed.
5. Under **Where did the money come from?**, pick the cash place.
6. Type the **Bank fee** if the bank charged a transfer fee.
7. Add a **Note** if needed.
8. Click **Record**. Check what the app shows in **Record this Supplier Payment?**, then click **Record** again.

To record an expense paid now:

1. On the **Purchases & Expenses** menu, click **Expense Vouchers**.
2. Click **+ New Expense Voucher**.
3. Pick the **Expense** and type a **Description**.
4. Under **Who was paid?**, pick **Someone not on file** or **A supplier on file**.
5. If someone not on file, type the **Name**, **TIN**, and check **VAT-registered (a VAT receipt)** if it is. If a supplier on file, pick the supplier.
6. Type the **Amount (VAT included)**.
7. Type the **Receipt no.** and pick the **Receipt date**.
8. Pick the **Tax withheld from supplier (EWT)** class only when the payee's tax requires it; the usual class is filled in.
9. Under **Where did the money come from?**, pick the cash place.
10. Click **Record**. Check what the app shows in **Record this Expense Voucher?**, then click **Record** again.

Record this Expense Voucher?

This will record ₱100.00 for Staff meals and welfare paid to Practice entry from Cash on hand (main cash box).

Total: **₱100.00**

Go back Record

☒ Someone not on file ☐ A supplier on file

Name * Practice entry TIN 123-456-789-01 ☐ VAT-registered (a VAT receipt)
As on the receipt

The receipt

Amount (VAT included) * 100.00 Receipt no. 1001 Receipt date 10/03/2026 📅

Input VAT is claimed only with the receipt number, its date and the payee's TIN.

Withholding tax (EWT) No EWT ▼

The box that asks Record this Expense Voucher? · Owner-guide screenshot

What the system does for you

It records what you owe and when you pay it. The receipt number, its date, and the payee's TIN claim the input VAT. VAT is worked out for you when the supplier is VAT-registered and has a TIN on file. The due date follows the supplier's terms. EWT is taken off what is owed when the bill is recorded, so a payment has no EWT.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong amount.
- **Fix:** You cannot delete recorded documents. Open the document and click **Edit** (this asks for a reason, cancels the old one, and records the replacement under a new number), or click **Cancel** with a reason of at least 10 characters. A bill that has payments cancels only after them: the app will warn you to cancel the payments first.

Printed dates on bills and vouchers

What it is for: Record the PRINTED DATE from the booklet or paper document, including when you type it later.

Before you start: Have the paper in front of you. The date must be real, today or earlier, and outside a month the accountant has signed off.

Steps:

1. Fill **Date to record it on** on a bill, or **Date on the voucher** on an expense voucher with the date printed on the paper. Leave it empty only when that date is today.

2. On a bill, also fill **Invoice date** from the supplier's invoice. On a voucher, **Receipt date** is the date of the supporting receipt; it is separate from the voucher's printed date.
3. Click **Record**, check the date and amounts, then click **Record** again.

What the system does: The recorded document and its journal use this date; its VAT goes to that month. The app still keeps when it was entered. It refuses a future date, an impossible date, or a date in a signed-off month.

Common mistakes: "Type the date printed on the document like 2026-09-30, or leave it empty for today." means check the day, month and year. "The date printed on the document cannot be after today (...)" means check the paper and the shop PC's date. "... is already signed off at month-end, so nothing new is dated ..." means stop and ask the accountant; do not change the true date just to get past it.

A duplicate supplier invoice

What it is for: Stop the same supplier invoice being recorded twice, while allowing an explained exception.

Before you start: Search the supplier's bills and expense vouchers and compare the paper. Going ahead needs the permission to backdate, given by default to owners, accountants and encoders. Follow the accountant's decision.

Steps:

1. Fill the bill or voucher and click **Record** to check it.
2. If it is a duplicate, open the existing record named by the refusal. If it is the same purchase, stop: do not record it again.
3. If the accountant confirms a genuine exception, fill **Reason to go ahead anyway** with 10 to 200 characters.
4. Click **Record** again, review the figures and reason, and confirm with **Record**.

What the system does: The reason box appears after the duplicate refusal, only for someone with permission. The next check and recording carry the reason, which is kept with the document.

Common mistakes: Do not change the invoice number to hide a duplicate. If the box does not appear, ask the accountant or owner to handle the exception.

Guide 57. Expense paid from several places

What it is for: Record an expense paid right away, but the money came from two or more places (like partly from petty cash and partly by GCash).

Before you start: Know what the expense was for, who was paid, and have the receipt ready. You will need to know exactly how much came from each cash place.

Steps

1. On the **Purchases & Expenses** menu, click **Expense Vouchers**.
2. Click **+ New Expense Voucher**.
3. Under **What was it for?**, pick the **Expense** and type a **Description**.
4. Under **Who was paid?**, pick **Someone not on file** or **A supplier on file** and type their **Name** and **TIN**, and tick **VAT-registered (a VAT receipt)** if it applies. For a supplier on file, pick the supplier.
5. Under **The receipt**, type the **Amount (VAT included)**, the **Receipt no.**, and pick the **Receipt date**. Pick the **Tax withheld from supplier (EWT)** if needed.
6. Under **Where did the money come from?**, click the first cash place.
7. Type the **Amount** for that cash place and any **Reference** (like a GCash or bank reference, or check no. and bank).
8. Click **+ Split the payment** to add another cash place. You can add up to four places in total.

The screenshot shows the 'Expense Voucher' form in a software application. On the left is a sidebar menu with categories: 'Production board', 'Piece rates', 'Sizer sets', 'Production Entries', 'PURCHASES & EXPENSES' (highlighted), 'Suppliers', 'Supplies', 'Payables by supplier', 'Supplier Bills', 'Supplier Payments', 'Supplier Advances', 'Supplier Advance Returns', 'Expense Vouchers' (selected), 'Inventory Counts', 'Purchase Orders', 'Receiving Reports', 'MONEY', 'Cash Accounts', 'Cash book', 'Checks on hand', 'Owners and officers', 'Loans', 'Fund Transfers', 'Cash Counts', and 'Other Receipts'. The main form area is titled 'Where did the money come from?'. It contains two identical sections for adding payment sources. The first section has a grid of buttons: 'Cash on hand (main cash box)' (highlighted in blue), 'Petty cash fund', 'Checks on hand (undeposited customer checks)', 'Practice counter till', 'Cash in bank – BDO', 'Cash in bank – China Bank', 'Practice bank', and 'E-wallet – GCash'. Below the grid are input fields for '100.00' and '1001', and a 'Remove' button. The second section is identical but with '0.00' in the first input field and 'GCash or bank re' in the second. At the bottom of the form is a '+ Split the payment' button.

The expense voucher with a payment split over two places · Owner-guide screenshot

9. Click the second cash place, type its **Amount**, and add a **Reference**.
10. The amounts must add up to what is paid out: the receipt less any tax withheld from the supplier (EWT). If you need to remove a row, click **Remove**.
11. Click **Record**. Read the sentence in the box **Record this Expense Voucher?**, then click **Record** again. Click **Go back** if something is wrong.

What the system does for you

It records the expense and takes the correct amount of money from each cash place. It works out the VAT and EWT. The box before you record it tells you what will happen, reading like: "This will record [amount] for [expense] paid to [payee] from [cash places], with [input VAT] input VAT; [amount] is withheld (EWT [rate]), so [amount] is paid out". If the money came from two places, it names both with their amounts.

Common mistakes and how to fix them

- **Mistake:** You see "The money paid out (...) must be (...)".
- **Fix:** The amounts from your cash places do not add up to the receipt less any tax withheld from the supplier (EWT). Adjust the amounts.
- **Mistake:** You recorded it wrongly.
- **Fix:** You cannot delete it. Open the voucher and click **Edit** to record a corrected one, or click **Cancel**, type a reason, and click **Cancel document**. Then record a new one.

Supplier advances and money returned

What it is for: Record a supplier downpayment before the bill arrives and apply or recover it later.

Before you start: Have the supplier, purchase order if any, payment proof and the accountant's EWT instructions.

Steps:

1. Open **Purchases & Expenses > Supplier Advances > + New Supplier Advance**.
2. Pick the supplier and **Purchase order (if it is a downpayment on one)**. Enter **Advance** before EWT and check **Tax withheld from supplier (EWT)**.
3. Under **Where did the money come from?**, enter the actual cash places and amounts. Add **Note**, then **Record**, review and confirm.
4. When recording the bill, check **Advances paid to this supplier** and **Apply on this bill**. Review the suggested application before recording the bill.
5. If the supplier returns money, open **Supplier Advance Returns > + New Supplier Advance Return**. Choose the supplier and **Advance**, then fill **Where did the money go?** with the money actually returned. Add a note and **Record**, review and confirm.

What the system does: It tracks the advance still open. Applying it reduces the bill and avoids withholding EWT again on the part already withheld.

Common mistakes: Do not enter the downpayment again as an ordinary expense or pay the full bill without checking the advance. Have the accountant investigate an unexplained supplier balance.

Guide 15. Inventory Count

What it is for: Print a sheet to write down what you have, count your materials or ready-made goods at a month end, and type the count to match the books to the physical inventory.

Before you start: You will need to print the count sheet to record your quantities before typing them in. Count on the last day of the month and record it that day. On a later day, a user with backdating permission must record the month-end date. Owners, accountants and encoders have that permission by default; ask the accountant to check the date.

Steps

1. On the **Purchases & Expenses** menu, click **Inventory Counts**.
2. Click **+ New Inventory Count**.
3. Choose the **Category** (**Materials and supplies** or **Ready-made merchandise**).
4. Check the **Count date**.
5. Click **Print the count sheet (CSV)** to download and print the list, then go count the physical items.
6. Back in the system, type the **Quantity** you counted for each item. Leave a quantity empty when there is none on hand.

New Inventory Count

What is counted, and on which day?

Category * Count date
Materials and supplies ▼ 2026-10-03

Inventory is counted at a month end and today is not one. Save the count as a draft; the accountant records it dated 2026-09-30.

[Print the count sheet \(CSV\)](#)

Quantities counted

Supply Unit	Quantity	Cost per unit	Value
Practice cotton cloth	yard 2	50.00	P100.00

Latest cost from PO-000001

Leave a quantity empty when there is none on hand.

Note
Practice entry

So far
Counted value P100.00

The new inventory count form, with the quantities counted · Owner-guide screenshot

7. The **Cost per unit** is the latest purchase cost; you can change it if needed, but you must type a reason why it is not the latest purchase cost.

8. Add a **Note** if needed.
9. Click **Record**. Check what the app shows in **Record this Inventory Count?**, then click **Record** again.
(Or click **Save draft** to finish later.)

What the system does for you

It calculates the total value of what you counted. If there is a difference, the adjustment increases or decreases the books to match what you actually counted.

Common mistakes and how to fix them

- **Mistake:** You entered the wrong quantity or cost for an item.
- **Fix:** You cannot delete a recorded count. To fix a mistake, just cancel and redo it. You can open the count and choose to edit it, which will ask for a reason, cancel the old count, and let you record a new one with the correct quantities.
- **Mistake:** The system says "The count matches the books ..., so there is nothing to adjust."
- **Fix:** You do not need to record a count if nothing changed from what is already in the books.
- **Mistake:** The system says a count for that category and date is already recorded.
- **Fix:** You can only have one count per category on the same date. Open the existing count and edit it instead.

Accounting and Tax

Guide 17. Opening balances

What it is for: Record the balances your business had on the exact day you start using this system, so your new books continue seamlessly from the old ones.

Before you start: Have the final reports from your old accounting system ready. You need the list of unpaid bills, open job orders, active loans, fixed assets, and the final trial balance.

Steps

1. On the **Admin** menu, choose **Opening balances**.

MOONPROJECT Server date: Saturday 3 October 2026 Search customers, JOs, numbers... + New Practice Owner ▼

Opening balances

The balances Virtus had on the cut-over date, recorded against opening balance equity (3900). Close the opening once 3900 is zero, the trial balance balances and every check is tied.

- 1. The cut-over date**
No cut-over date yet. Pick the last day the old books cover, usually a month end.
- 2. Opening documents**
Cash, inventories, prepayments and the equity breakdown go on Opening Balances (OB-). Balances kept per customer, supplier, person, loan or asset open with their own documents.
No opening document recorded yet.
- 3. The checks**
Opening balance equity (3900) Zero
Trial balance on the cut-over date No cut-over date yet
Each account kept per customer, supplier or person against the sum of its parties

Account	Kept per	Account total	Sum of parties	Tied
1201 Accounts receivable – trade	customer	₱4,000.00	₱4,000.00	Tied
1209 Allowance for credit losses	customer	₱0.00	₱0.00	Tied
1210 Advances to employees (cash advances)	employee	₱2,000.00	₱2,000.00	Tied
1220 Due from officers and stockholders	officer	₱0.00	₱0.00	Tied

The Opening balances screen with its checks · Owner-guide screenshot

2. Pick the **Cut-over date** and click **Set the cut-over date**. This is the last day your old books cover, usually a month end. The books open on this date, and every opening document is dated that day.
3. Record your opening balances in this order:
 - First, record your cash and bank balances using **New opening balances**.
 - Next, record what customers owe you for work in progress using **New opening job order**.
 - Then, record the bills you still owe using **New opening supplier bill**.
 - After that, record your active loans using **New opening loan**.

- Finally, record your fixed assets using **New opening fixed asset**.
- For everything else on your old trial balance (like inventory, equity, or prepayments), use **New opening balances** to enter the lines.

4. Check the system's progress under **The checks**.

- **Opening balance equity (3900)** is a temporary holding area that balances your entries while you type them in, and it must end at zero to prove you entered all your old balances completely and correctly.
- Look at the **Trial balance on the cut-over date**. It will say "Balances" when your debits and credits match.
- Look at the accounts kept per customer, supplier or person. The system checks that the **Account total** matches the **Sum of parties**. They must say "Tied".

5. When the checks are all clear and 3900 is zero, click **Close the opening**.

What the system does for you

It keeps track of everything you enter and shows you exactly what is missing or unbalanced. It automatically builds the opening trial balance from the separate documents you enter. Once you close the opening, it locks the cut-over date and prevents accidental changes to your starting numbers.

Common mistakes and how to fix them

- **Mistake:** You entered a wrong amount in an opening document after you closed the opening.
- **Fix:** You cannot cancel or edit opening documents after the opening is closed. To fix mistakes from now on, you must record a journal voucher.
- **Mistake:** The cut-over date is wrong, but the system will not let you move it.
- **Fix:** It moves only while no opening document is recorded on it. You must cancel all opening documents first, then click **Move the cut-over date**.

Guide 18. BIR payments

What it is for: Know what tax returns are due, close the VAT at the end of a quarter, and record the payments made for the 2550Q, 0619-E, and 1601-EQ.

Before you start: Know that the system tracks due dates for you, taking weekends and holidays into account. You will need the payment details (amount, penalty, reference) when you record a BIR payment.

Steps

1. Check what is due:

- On the **Accounting & Tax** menu, click **Tax calendar**. Here you will see a list of what falls due and when.

2550Q worksheet

The items of the quarterly VAT return, from the books. They are named as on the return but carry no line numbers: check them against the form in use.

Year
2026
Quarter
Q3

Q3 2026 (July to September)

File the 2550Q by **2026-10-26**. Closed by VATC-000001 on 2026-10-01.

Item	Amount	Tax
VATable sales	133,750.12	16,049.88
Zero-rated sales	0.00	0.00
Exempt sales	0.00	0.00
Less: output VAT on uncollected receivables		0.00
Add: output VAT on uncollected receivables recovered		0.00
Total output tax due	133,750.12	16,049.88
Input tax carried over from the previous quarter		0.00
Domestic purchases: capital goods	0.00	0.00
Domestic purchases: goods other than capital goods	28,000.00	3,360.00
Domestic purchases: services	0.00	0.00
Domestic purchases with no input tax: capital goods	0.00	0.00
Domestic purchases with no input tax: goods other than capital goods	0.00	0.00

The 2550Q worksheet · Owner-guide screenshot

- Click the **Record the VAT close of Q...** button.
- Pick the **Year** and **Quarter**, and optionally choose the **Date of the close** (the quarter's last day or today).
- Click **Record**.

3. Record a BIR payment:

- Open the worksheet of the return you paid: **0619-E (monthly EWT)** for the first or second month of a quarter, **1601-EQ (quarterly EWT)** for a quarter, or **2550Q worksheet** for the VAT.
- Click **Record BIR payment**.
- Fill in the **Return**, **Year**, and **Month** or **Quarter**.
- Pick **Where did the money come from?**.
- Type the **Amount paid**, any **Penalty** paid on top, and the eFPS, eBIRForms or bank **Reference**.
- You may also add an optional **Note**.
- Click **Record**.

What the system does for you

The tax calendar automatically shifts due dates that fall on weekends or holidays to the next working day. When you open a tax worksheet, the system automatically calculates the tax still payable or left to pay. When you record a BIR payment from a worksheet, the system links the payment to the exact return and period, reducing the amount left to pay in the system.

Moonproject · User manual

Page 98 of 174

Common mistakes and how to fix them

- **Mistake:** You recorded a BIR payment with the wrong amount, date, or reference.
- **Fix:** Do not delete the payment. Open the wrong payment, cancel it, and redo it by recording a new payment with the correct details.

Guide 29. VAT each quarter

What it is for: Check the sales and purchases, mark the tax certificates (2307s) received, preview the VAT for the quarter, check the 2550Q worksheet, and close the VAT at the end of the quarter. The accountant normally closes the VAT.

Before you start: The system calculates the VAT from your daily work. The worksheet will warn you if any journal vouchers on input VAT still need classifying. The accountant must classify them before filing. Have your physical 2307s ready if you received them.

Steps

1. Check the sales and purchases registers:

- On the **Accounting & Tax** menu, click **Sales register** to see all sales with output VAT and the **Total**.

2307s received

Tax withheld by customers (CWT) and VAT withheld by government buyers, with each 2307's ATC and whether it is in hand. Those from before the cut-over date say "opening", with the quarter they cover. Mark a pending 2307 received when it arrives: its VAT withheld is then claimed at the next VAT close.

First date * 10/01/2026

Last date * 10/03/2026

Show

2026-10-01 to 2026-10-03

No 2307 is still to come.

Nothing in these dates.

[Download for Excel](#)

The 2307s received screen · Owner-guide screenshot

- Find the physical 2307 certificate from your customer.
- Click **Mark received** next to the matching row. The button shows only on rows still open. This opens a "Mark the 2307 received" box.
- Check the row details carefully. Click its **Mark received** button to confirm. Or click **Back** to cancel. The box says it cannot be undone. Its VAT withheld will be claimed at the next VAT close.

3. View the VAT for the quarter:

- On the **Accounting & Tax** menu, click **VAT this quarter**.
- Pick the **Year** and **Quarter** to see a preview of the VAT payable or carried over.

4. Check the 2550Q worksheet:

- Go to the **2550Q worksheet** on the **Accounting & Tax** menu to see the exact **Item**, **Amount**, and **Tax** figures for the BIR form.
- Look for the line **Purchases still to classify (journal vouchers on input VAT)**. Ask your accountant to classify them into capital goods, goods, or services before you file.
- The system will also warn you to "Record the VAT close of this quarter before filing, so the books show the same figures."

5. Close the VAT (at quarter end):

- Once the quarter ends and is not closed, a link appears. Click **Close the VAT of Q...** on the **VAT this quarter** screen, or **Record the VAT close of Q...** on the worksheet.
- On the **Close the VAT of a quarter** screen, pick the **Year** and **Quarter**. The system shows a preview.

- You can optionally type a **Note** (for example, the 2550Q reference).
- If you may back-date, you can choose the **Date of the close** (the quarter's last day or today). Everyone else will just see it is dated today.
- Click **Record**. Close the quarters in order. If a later quarter is already closed, the app refuses. Cancel the later close first.

6. Pay the 2550Q:

- After filing, record the payment. See [18. BIR payments](#) for how to do this.

What the system does for you

The system builds the sales and purchases registers automatically from your invoices and bills. It separates VAT withheld that is missing its 2307 and only claims it once marked received. When you close the VAT, it locks in the quarter's figures and moves the balances to VAT payable or carries them over to the next quarter.

Common mistakes and how to fix them

- **Mistake:** You missed a purchase dated in this quarter, and recorded it after closing the VAT.
- **Fix:** The system gives a warning that items were recorded after the close. The close stays as it was. The late items go to the next quarter's close, unless the accountant decides to amend the earlier return. You do not need to delete anything.
- **Mistake:** You clicked Mark received on the wrong 2307.
- **Fix:** This cannot be undone. Always check the row carefully before confirming in the "Mark the 2307 received" box.

Journal vouchers and account-type warnings

What it is for: Record an accountant's adjustment that is not covered by an ordinary business form, and maintain the chart of accounts.

Before you start: Have the accountant's balanced entry and supporting paper. Do not use a journal voucher just to force two reports to agree.

Steps:

1. Open **Accounting & Tax > Journal Vouchers > + New Journal Voucher**.
2. Fill **What is the entry for?**. Choose each line's account, debit or credit, and the customer, supplier or other party when asked. Use **+ Add a line** as needed.
3. Check that debits equal credits. For a late entry, fill **Date of the entry** and **Why is it recorded late?** when offered.
4. Click **Record**, review the entries, then **Record** again. Guide 59 explains scheduled reversals.
5. To add an account, open **Chart of accounts > Add an account**. Fill **Code**, **Name**, **Type** and the remaining choices, then **Add account**.
6. If a code/type warning appears, check it with the accountant before using the account.

What the system does: A mismatched type is a warning, not a refusal; the account is still saved. The warning says: "The statements group accounts by code, not by type. Check the code and the type before you use the account." The first digit controls where it appears on the statements.

Common mistakes: Do not add the same account again because a warning appeared. Review the saved account. If its setup is wrong, ask the accountant to decide the correction before posting to it. Cash places belong in **Cash Accounts**.

Guide 59. Reversing journal vouchers

What it is for: Mark a journal voucher to reverse on the first day of next month, and record the reversal when it is due. You use this for accruals.

Before you start: Know the accrual you are recording, or which marked voucher is due to be reversed.

Steps

To mark a voucher to reverse:

1. On the **Accounting & Tax** menu, click **Journal Vouchers**, then click **+ New Journal Voucher**.
2. Fill in the voucher as usual, and tick **Reverse on the first day of next month (an accrual)**. It shows in **Reversals due from that day**.

New journal voucher

What is the entry for? *

Practice entry

Shown in the general journal, e.g. Accrual of September rent

Lines

▼	100.00	Credit	×
Practice entry			
▼	Debit	100.00	×
Practice entry			

+ Add a line

☒ Reverse on the first day of next month (an accrual). It shows in Reversals due from that day.

Date of the entry
10/03/2026

Empty is today

So far

Debits	P100.00
Credits	P100.00
Debits – credits	P0.00

Balanced

This will record a journal voucher of P100.00 over 2 lines: Practice entry. It is to be reversed on 2026-11-01.

A journal voucher with the box to reverse it next month ticked · Owner-guide screenshot

3. Click **Record**, read the box **Record this Journal Voucher?**, then click **Record** again.

To record the reversal:

1. On or after the first day of the next month, on the **Accounting & Tax** menu, click **Reversals due**.
2. Find the voucher in the list and click **Reverse**. A new journal voucher opens with the same lines, debits and credits swapped. A note reads "This reverses [number] ... Record it as it is."
3. Click **Record**, read the box, then click **Record** again.

What the system does for you

It lists the marked vouchers in **Reversals due** from the first day of the next month until they are reversed. **Reverse** fills in the reversal for you, dated the first day of that month even if you record it a few days later. A voucher is reversed only once.

Common mistakes and how to fix them

- **Mistake:** You expect the voucher to reverse by itself on the first day of the next month.
- **Fix:** Nothing reverses by itself. Go to **Reversals due**, click **Reverse**, and record the new voucher.
- **Mistake:** You see "No reversal is due."
- **Fix:** No marked voucher has reached its day yet, or it was already reversed.
- **Mistake:** You recorded a reversal wrongly.
- **Fix:** You cannot delete it. Open it and click **Cancel**, type a reason, and click **Cancel document**. It then shows again in **Reversals due**.

Guide 61. Allowance for credit losses

What it is for: Choose how bad debts are handled, set an allowance for amounts that may not be collected, and write off an invoice that will not be paid. This guide is for the accountant.

Before you start: Bad debts are written off directly unless the accountant chose the allowance method (go-live decision ACC-26). Know the rates you use for each age of receivable, or the allowance you need.

Steps

To set the bad debt method:

1. On the **Accounting & Tax** menu, click **Settings**.
2. Find the **Bad debts** setting and click **New version from a date**.

From	Value	Reason
2000-01-01	Rent 5%; Contractors and printers 2%; Professional fees, individual (sworn declaration) 5%; Professional fees, individual 10%; Professional fees, firm (lower rate) 10%; Professional fees, firm (higher rate) 15%; Goods (Top Withholding Agent only) 1%; Services (Top Withholding Agent only) 2%	Default at install: EWT rates by class (PLAN D4.8)

Forfeited deposit is VATable
A forfeited customer deposit is VATable: 12/112 of it goes to output VAT (ACC-15; default no)
In force today: **No**

From	Value	Reason
2000-01-01	No	Default at install: forfeited deposits are not VATable (PLAN ACC-15)

Bad debts
Bad debts: written off directly to 6270, or provided for on 1209 and written off against it (ACC-26; default direct)
In force today: **Written off directly to bad debts (6270)**

From	Value	Reason
2000-01-01	Written off directly to bad debts (6270)	Default at install: bad debts are written off directly (PLAN ACC-26)

Claim output VAT on uncollected receivables once the agreed time to pay has passed (EOPT, BMC 65-2024) (ACC-27: default no)

The Bad debts setting on the Settings screen · Owner-guide screenshot

3. Pick **Written off directly to bad debts (6270)** or **Allowance for credit losses (1209)**, written off **against it**, pick the date, type a **Reason**, and click **Preview the change**, then **Save this version**.

To set the allowance:

1. On the **Sales** menu, click **Allowance for Credit Losses**.
2. Click **+ New Allowance for Credit Losses**.
3. Pick **Allowance per customer or in total: customer or total**.

4. Type the rate for each age, in basis points (100 = 1%): **Not yet due, 1–30 days overdue, 31–60 days overdue, 61–90 days overdue** and **Over 90 days overdue**.
5. For **total** only, you may type **In total: allowance needed, if not the suggested amount**.
6. Type the **Reason**.
7. Look at **So far** for the total and any messages.
8. Click **Record**. Read the box **Record this Allowance for Credit Losses?**, then click **Record** again.

To write off an invoice:

1. On the **Sales** menu, click **Bad Debt Write-offs**.
2. Click **+ New Bad Debt Write-off**.
3. Under **Customer**, pick the customer. Under **Which invoice?**, pick the invoice.
4. Type **Why is it written off? (at least 10 characters)**.
5. Click **Write off**. Read the box, then click **Record**.

What the system does for you

It suggests the allowance from the Unpaid customer balances (AR aging): what each customer owes in each age, times your rates. It records only the change from the allowance already held. The box reads like: "This will set the allowance for credit losses on [date] (per customer) at [amount], from [amount] ...". With the allowance method, a write-off is charged against the allowance instead of straight to bad debts. A write-off takes all that the invoice still owes. Its output VAT stays.

The **Unpaid customer balances (AR aging)** report (on the **Reports** menu) shows **Less allowance for credit losses** and **Net receivables**. The **Balance sheet** shows the allowance under the receivables.

Common mistakes and how to fix them

- **Mistake:** You see "The allowance for credit losses holds [amount], [amount] short of the [amount] to write off. Raise the allowance first".
- **Fix:** Record a new **Allowance for Credit Losses** that is high enough, then do the write-off.
- **Mistake:** You see "Bad debts are written off directly on [date] ... so the allowance can only go down."
- **Fix:** Change the **Bad debts** setting to the allowance method first.
- **Mistake:** You see "The allowance already holds [amount] as needed on [date], so there is nothing to post."
- **Fix:** Nothing changed. Check the rates.
- **Mistake:** You wrote off the wrong invoice.
- **Fix:** You cannot delete it. Open it and click **Cancel**, type a reason, and click **Cancel document**.

Guide 62. VAT on Uncollected Receivables

What it is for: Take the output VAT of a credit sale off the 2550Q when the customer has not paid after the agreed time to pay, and add it back when the customer finally pays. This guide is for the accountant.

Before you start: The claim is off until the accountant decides Virtus claims it (go-live decision ACC-27). To turn it on, on the **Accounting & Tax** menu, click **Settings**, find the setting **Claim output VAT on uncollected receivables once the agreed time to pay has passed**, and click **New version from a date**.

Steps

To claim output VAT on an uncollected receivable:

1. On the **Accounting & Tax** menu, click **VAT on Uncollected Receivables**.
2. Click **+ New VAT on Uncollected Receivable**.

Claim output VAT on an uncollected receivable

The claim is off. The accountant turns it on in the settings (ACC-27) after deciding Virtus claims it.

Invoices whose agreed time to pay ended in an earlier quarter

No invoice can be claimed: none whose agreed time to pay ended in an earlier quarter still owes.

The accountant confirms (the books cannot tell)

- ☐ A written agreement sets the time to pay
- ☐ The sale is listed on its own in the SLSP
- ☐ Its output VAT was declared on time in a filed 2550Q
- ☐ This VAT is not claimed as part of a bad debt deduction

Note

Optional

What will be recorded

Pick one above.

Record Back

The VAT on uncollected receivables form · Owner-guide screenshot

3. Under **Invoices whose agreed time to pay ended in an earlier quarter**, pick the invoice.
4. Under **The accountant confirms (the books cannot tell)**, tick all four boxes:
 - **A written agreement sets the time to pay**
 - **The sale is listed on its own in the SLSP**
 - **Its output VAT was declared on time in a filed 2550Q**
 - **This VAT is not claimed as part of a bad debt deduction**

5. Type a **Note** if you want (optional).
6. Read the box **What will be recorded**.
7. Click **Record**. Read the box **Record this VAT on Uncollected Receivable?**, then click **Record** again. Click **Go back** if something is wrong.

To add back output VAT when the customer pays:

1. On the **Accounting & Tax** menu, click **VAT on Recovered Receivables**.
2. Click **+ New VAT on Recovered Receivable**.
3. Under **Claims whose customer has paid since**, pick the claim.
4. Type a **Note** if you want (optional).
5. Read the box **What will be recorded**.
6. Click **Record**. Read the box **Record this VAT on Recovered Receivable?**, then click **Record** again.

What the system does for you

It lists only the invoices that can be claimed and the claims whose customer has paid since. It checks the rules it can (the sale date, a time to pay, VAT on the invoice, the quarter closed, not written off). Before you record, the box reads like: "This will take [amount] output VAT off this quarter's 2550Q for [invoice] of [customer] ... It is added back when the customer pays." For an add-back, it works out the VAT on what the customer paid and reads like: "This will add [amount] output VAT back to this quarter's 2550Q".

Common mistakes and how to fix them

- **Mistake:** You see "Claiming output VAT on uncollected receivables is off."
- **Fix:** The setting is off. The accountant turns it on in **Settings** (ACC-27).
- **Mistake:** You see "No invoice can be claimed" or "No add-back is due".
- **Fix:** Nothing qualifies yet. An invoice shows only in the quarter after its time to pay ended, and a claim shows only after the customer pays.
- **Mistake:** You picked the wrong invoice or claim.
- **Fix:** You cannot delete it. Open it and click **Edit** to record a corrected one, or click **Cancel**, type a reason, and click **Cancel document**. If the claim already has an add-back, cancel the add-back first.

Guide 53. Printing 2307 for suppliers

What it is for: Print the Certificate of Creditable Tax Withheld at Source (Form 2307) that the shop must give to each supplier it withheld tax from, so they can claim it.

Before you start: You will need to know which quarter you are printing the certificates for.

Steps

1. On the **Accounting & Tax** menu, click **2307s to issue**.

MOONPROJECT Server date: Saturday 3 October 2026 Search customers, JOs, numbers... + New Practice accountant ▼

2307s to issue

The 2307 each supplier gets for the tax Virtus withheld from them: one per supplier and ATC, with each month's income payment (base) and tax withheld, from the EWT register.

Year: 2026 Quarter: Q3

Q3 2026 (July to September)
No tax was withheld from a supplier in this quarter, so there is no 2307 to issue.
[Download for Excel](#)

The 2307s to issue screen · Owner-guide screenshot

2. Pick the **Year** and the **Quarter** (Q1 to Q4) you want to print. The screen opens on the quarter whose returns are due now. You see one line per supplier and ATC, with each month's base and tax withheld.
3. To print for just one supplier, click **Print 2307** on their line (it is off for a line with no supplier). To print for everyone who had tax withheld in the quarter, click **Print all for this quarter**. To get the list in a spreadsheet, click **Download for Excel**.
4. A new window will open with the printed forms. *Note: If your browser blocks the print window, you must allow pop-ups for this site.*

What the system does for you

The system gathers all the tax withheld from each supplier in the chosen quarter and puts it on the BIR Form No. 2307. When you print it out, check that the supplier's **Registered name**, **TIN** and **Registered address**, and the shop's own, are correct, and that the right **ATC** (Alphanumeric Tax Code) is shown. If the

supplier's name or TIN is wrong, correct it in the supplier's file under **Suppliers (Registered name and TIN)** and print again. Once checked, sign it on the **Payor / Authorized representative** line before giving it to the supplier.

Common mistakes and how to fix them

- **Mistake:** The printout or the list says "To confirm" where the ATC should be.
- **Fix:** A line that says "To confirm" (or "ATC to confirm" on the screen) means the supplier's file does not say whether the supplier is an individual or a company, so the system cannot choose between the two ATCs it shows in brackets. Ask your accountant which one applies before you sign and give out the certificate.

Guide 28. Year-end tax and 2316

What it is for: Add a previous employer's pay and the pay before Moonproject. Do the year-end tax adjustment on the last payroll. See what needs a substituted filing. Download the 2316 data sheet and the 1604-C alphalist.

Before you start: Make sure all payroll runs and 13th-month pay for the year are recorded. The accountant adds the previous pay on the employee's page. Under **Pay before Moonproject and from previous employers**, type the **Year** (for example 2026). On the **Paid by** menu, pick either **This shop, before Moonproject** or **Previous employer (from its 2316)**. Choosing the previous employer adds a required **Previous employer** field and an optional **Its TIN** field. Fill in the gross, the non-taxable parts, and the tax withheld. Click **Save**.

Steps for the year-end adjustment

1. On the **People & Payroll** menu, click **Payroll Runs**.
2. Click **+ New Payroll Run**.
3. Pick the **Pay group** and the **Period** first.
4. If the period ends in December, a tick box appears. Tick the **Year-end tax adjustment** box.
5. In the preview, each employee's **Tax** cell says "Refund ₱..." or "Deficiency ₱... withheld". The **Tax refund** column appears only after it is recorded.
6. Click **Record**.

Steps for the 2316 and alphalist

1. On the **People & Payroll** menu, click **2316 and alphalist**.

2316 and alphalist

Year 2026 [1604-C schedule 1 \(CSV\)](#) [1604-C schedule 2, minimum wage earners \(CSV\)](#)

Employees paid in 2026

Employee	Gross	Taxable (with previous employer)	Tax due	Tax withheld	Year-end adjustment	Substituted filing	
Practice Office Employee EMP-0001	₱22,500.00	₱20,275.00	₱0.00	₱0.00	Not done yet	Yes	2316
Practice Production Employee EMP-0002	₱4,800.00	₱4,095.35	₱0.00	₱0.00	Not done yet	Yes	2316

Tax withheld in amber differs from the tax due: the year-end adjustment is not done yet, or the pay could not cover it. Substituted filing also needs the employee to have had no other income and one employer the whole year; ask them before ticking it on the 2316.

The 2316 and alphalist screen · Owner-guide screenshot

- Pick the **Year**.
- It shows if an employee needs **Substituted filing**.
- Click **2316** next to an employee. It opens a page called **2316 data**. Click **Print**.
- Click **1604-C schedule 1 (CSV)** or **1604-C schedule 2, minimum wage earners (CSV)** to download the files for the BIR data entry.

What the system does for you

When you tick **Year-end tax adjustment**, it compares the year's tax due to what was already withheld. A deficiency is withheld from the net pay as far as the pay allows. An excess shows as **Add year-end tax refund** on the payroll run and the payslip. An employee qualifies for substituted filing if they had one employer for the whole year and the tax withheld equals the tax due. It then shows **Yes** under **Substituted filing**.

Common mistakes and how to fix them

- Mistake:** You recorded a payroll run or a 13th-month pay after you did the year-end adjustment. The new pay is not in the year's total.
- Fix:** Cancel the new payroll run or 13th-month pay. Then view the December payroll run with the adjustment and cancel it too. Redo the December payroll run and tick the **Year-end tax adjustment** box again.

Booklets, tax files and filing evidence

What it is for: Register paper booklet numbers and prepare, check and keep tax-return evidence.

Before you start: Have the booklet's authority and range. The accountant must confirm the current form, period and tax treatment before filing.

Steps:

1. Open **Accounting & Tax > Booklets**, click **Register booklet**, and enter **Kind**, **ATP number**, **Printer**, **First serial number**, **Last serial number** and **Date received**. Click **Register booklet**. Open a booklet to inspect used and skipped numbers.
2. Open the appropriate **SLSP: sales**, **SLSP: purchases**, **SAWT**, **0619-E (monthly EWT)**, **1601-EQ (quarterly EWT)**, **1702Q worksheet**, **1702-RT worksheet (annual)** or **1604-E (annual EWT)**. Pick its period and review the figures and warnings.
3. Correct missing IDs and classification from the source records. Use the download offered on that screen and validate it with the current official filing tools. The accountant checks adjustments, credits and prior payments.
4. File and pay through the official channel. Keep the acknowledgement and payment reference.
5. Open **Filed returns > Record a filing**. Fill **Form**, **Period**, **Date filed**, **Reference**, and optional note. Click **Record a filing**.
6. Record the actual BIR payment using guide 18. Check **Changes after filing** under **Reports** when later entries affect a filed period.

What the system does: Booklets track paper serial numbers separately from system numbers. Filing evidence keeps the form and period on file. The app's worksheet and filing log do not submit a return or move money at the bank.

Common mistakes: A wrong filing row is corrected with **Void**, a **Reason** and **Void this row**, then a correct filing row. This does not undo the real BIR filing; the accountant decides whether an amendment is needed. Do not reuse a cancelled paper invoice number.

Guide 48. Go-live decisions

What it is for: Before switch-over day, the accountant and the owners must answer important questions about how the business works. This register keeps track of those questions and records what was decided.

Before you start: Each question shows a **Default:** answer and when it is needed.

Steps

1. On the **Accounting & Tax** menu, click **Go-live decisions**.

The screenshot displays the 'Go-Live Decisions' interface within the Moonproject software. The top header bar includes the Moonproject logo, the server date (Saturday 3 October 2026), a search bar, and buttons for '+ New' and 'Practice accountant'. The left sidebar lists various menu items under 'OVERVIEW' and 'SALES'. The main content area is titled 'Go-Live Decisions' and shows two questions (ACC-01 and ACC-02) that need to be answered before going live. Each question has a default answer, a status (Open — no answer recorded), and fields for 'What was decided (or done)', 'Who decided it', 'Decision date', and a 'Note'. A 'Record new answer' button is present for each question. A 'Print for signature' button is also visible at the top right of the main area.

The Go-live decisions screen · Owner-guide screenshot

2. Under **Who must decide**, pick **Everyone**, **Accountant**, **Owner**, or **Co-owners** to see different questions.
3. A question with no answer shows **Open — no answer recorded..** The top of the page shows how many rows are still open (for example, "3 of 20 rows still open"). For questions tied to a setting, it will show the **Current setting:** and an **Open Settings** link.
4. Type the answer in **What was decided (or done)**.
5. Type **Who decided it** (must be 2 letters or more) and pick the **Decision date**.
6. Type a **Note** if you want to explain why.
7. Click **Record new answer** (this button stays off until the required fields are filled).
8. Click **Print for signature** to print the questions now shown (with their answers) and a line for the accountant's signature and date.

What the system does for you

It keeps a full history of your answers. If you answer a question again later, the old answer stays in the **History**. For some questions, the system checks how the app is set up. If the recorded answer does not match the app's rules, it warns you: **Warning: the recorded answer differs from this setting.** and provides an **Open Settings** link so you can fix the app's setup to match your decision.

Common mistakes and how to fix them

- **Mistake:** A question has a warning that the recorded answer differs from the **Current setting**..
- **Fix:** This means the app is not set up the way you decided. Click **Open Settings** to change the app's setting, or record a new answer in the register if the decision has changed; the old one stays under **History**.

Guide 33. Month-end checklist

What it is for: Check that all accounting and record-keeping is complete for a given month. It gives the owner and accountant a single place to see what is done, what is still missing, and when a month is finally closed.

Before you start: You open this in the first days of the next month. The accountant is usually the one who signs the month off.

Steps

1. On the **Accounting & Tax** menu, click **Month-end checklist**.
2. Pick the **Month** you want to look at.

The screenshot shows the Moonproject web application interface. The top navigation bar is dark blue with the Moonproject logo, server date (Saturday 3 October 2026), a search bar, and buttons for '+ New' and 'Practice accountant'. A left sidebar lists various accounting functions under 'OVERVIEW' and 'SALES'. The main content area is titled 'Month-end checklist' for 'September 2026'. It displays a summary: 'September 2026: 3 items are not done, 3 done, 3 not needed. Read from the app as of 2026-10-03.' Below this, a table lists items with status indicators (Not needed, Not done, Done) and blue links to open the respective screens. The items include Depreciation run, Bank reconciliation, Cash count, and Inventory count, each with a brief description of the current status.

Items
Not needed Depreciation run Open depreciation run No asset has depreciation to charge for this month.
Not done Bank reconciliation, each bank Open bank reconciliation 0 of 1 done. Not needed Cash in bank – BDO No entries up to the month end. Not needed Cash in bank – China Bank No entries up to the month end. Not done Practice bank Not reconciled to the end of 2026-09.
Done Cash count, each cash box Open cash count 1 of 1 done. Not needed Cash on hand (main cash box) Nothing in the box this month. Not needed Petty cash fund Nothing in the box this month. Done Practice counter till Counted on 2026-09-30 (CNT-000028).
Not needed Inventory count Open inventory count No stock on the books at the month end. Not needed materials and supplies No stock on the books at the month end. Not needed ready-made merchandise No stock on the books at the month end.

The month-end checklist for a month · Owner-guide screenshot

3. Check the list of items. Click the blue links on the right of each item to open the screen that does it.
4. Once everything is done, the accountant types a **Note** (between 5 and 500 characters) and clicks **Sign off the month**. The system will ask for your password to confirm. Note that a month can only be signed off after its last day; before that, the screen will say it has not ended yet. The form needs sign-off permission, given by default to owners, accountants and encoders. The shop should have its accountant review and sign off the month.

What the system does for you

The system automatically checks the records for that month and updates the status of each item. An item can show as **Done**, **Not done**, or **Not needed**.

Not needed means there is nothing to do for that item in this month. For example, if you do not have any cash boxes, the cash count is not needed. If no assets have depreciation to charge, the depreciation run is not needed.

The items it checks are:

- **Depreciation run:** Posts depreciation on your assets (click **Open depreciation run**).
- **Bank reconciliation, each bank:** Matches your bank statements with the system (click **Open bank reconciliation**).
- **Cash count, each cash box:** Checks the physical count of money (click **Open cash count**).
- **Inventory count:** Checks the physical count of materials or goods (click **Open inventory count**).
- **Government remittances of the month:** Checks if SSS, PhilHealth, and Pag-IBIG payments are recorded (click **Open government remittances**).
- **0619-E (monthly EWT) / 1601-EQ (quarterly EWT):** Checks the withholding tax returns (click **Open 0619-E worksheet** or **Open 1601-EQ worksheet**).
- **Quarter's VAT close:** Checks that the VAT close is recorded at the end of a quarter (click **Open VAT close** or **Open VAT this quarter**).
- **Exceptions inbox reviewed:** Checks that you have no unread warnings in your inbox (click **Open the exceptions inbox**).
- **Drafts older than 3 days:** Checks for any old unfinished work (click **Open home**).

When the accountant signs off, they write a **Note** explaining what they checked or why something is still open. The system saves who signed it and when.

Common mistakes and how to fix them

- **Mistake:** A change is made to the records of a month after the accountant has already signed it off.
- **Fix:** The system will show a warning at the top saying that documents were **Changed after sign-off**. It will list exactly which documents were recorded or cancelled. The accountant must check these changes, type a new note, and click **Sign the month off again** (or **Sign off again**). Nothing from the first sign-off is deleted; the system keeps a history of all sign-offs.

Reports

Guide 09. Books and Reports

What it is for: View the full accounting records of the business: the General journal, General ledger, and Trial balance.

Before you start: Know which report you want to see and the dates you are interested in. *Note: Owners, accountants and encoders have access to these reports by default.*

Steps

1. On the **Reports** menu, choose the report you want:
 - **General journal:** To see a chronological list of every accounting entry.
 - **General ledger:** To see the movements and running balances of each individual account.
 - **Trial balance:** To see a snapshot of all account balances on a specific date.
2. For the General journal and General ledger, choose the **From** and **To** dates.
3. For the General ledger, you can optionally pick a specific **Account** to filter the results.
4. For the Trial balance, choose the **As of** date. You can also pick a **Compare with (optional)** date to see changes between two periods.
5. Click **Show**.

What the system does for you

It automatically builds the accounting reports from all the documents and transactions recorded in the system. The reports update instantly as new records are saved. You can click on the source document numbers in the journal or ledger to see exactly where the entry came from.

To save the information to your computer, click **Export CSV**. This downloads a file you can open in Excel or other spreadsheet programs. You can also click **Print this page** to print the report directly from your screen.

Common mistakes and how to fix them

- **Mistake:** You cannot find the reports on the menu.
- **Fix:** Owners, accountants and encoders have access to the books by default. If the reports are missing, ask the owner to check **Roles and permissions**.

Guide 16. Income Statement and Balance Sheet

What it is for: View how much money the business made or lost, and see what the business owns and owes.

Before you start: Know the dates you want to check. *Note: Owners, accountants and encoders have access to these reports by default.*

Steps

1. On the **Reports** menu, choose **Income statement** or **Balance sheet**.
2. To open the Income statement for a month or a year, choose the **From** and **To** dates, or click **This month**, **This quarter**, or **Year to date**.

4. Click **Show**.

What the system does for you

It automatically builds the statements from the posted journals.

The Income statement shows your business performance: Revenue is your sales. Cost of sales is the direct cost to make your goods. Gross profit is the money left after making the goods. Operating expenses are the everyday costs to run the business. Net income is your final profit.

On the Balance sheet, current-year earnings are the net income from the start of the year to your chosen date, while opening balance equity is a setup account that only shows while it is not zero. A balance check line at the bottom tells you if total assets equal total liabilities and equity.

The **Statement of changes in equity** (on the **Reports** menu) shows how your equity moved. Pick the **From** and **To** dates and click **Show**, or click **This month**, **This quarter** or **Year to date**. The rows start with the balance at the start, then **Profit or loss for the period**, **Dividends declared**, and **Owners' money put in and taken out**, and end with the balance at the **To** date. The **Total equity** column at the end agrees with total equity on the balance sheet.

To save the information to your computer, click **Export CSV**.

Common mistakes and how to fix them

- **Mistake:** You cannot find the statements on the menu.
- **Fix:** Owners, accountants and encoders can open these reports by default. If a report is missing, ask the owner to check **Roles and permissions**.

- **Mistake:** You want to fix a wrong amount on the statement by deleting a record.
- **Fix:** You cannot delete records in the system. Fix mistakes by canceling and redoing the incorrect document.

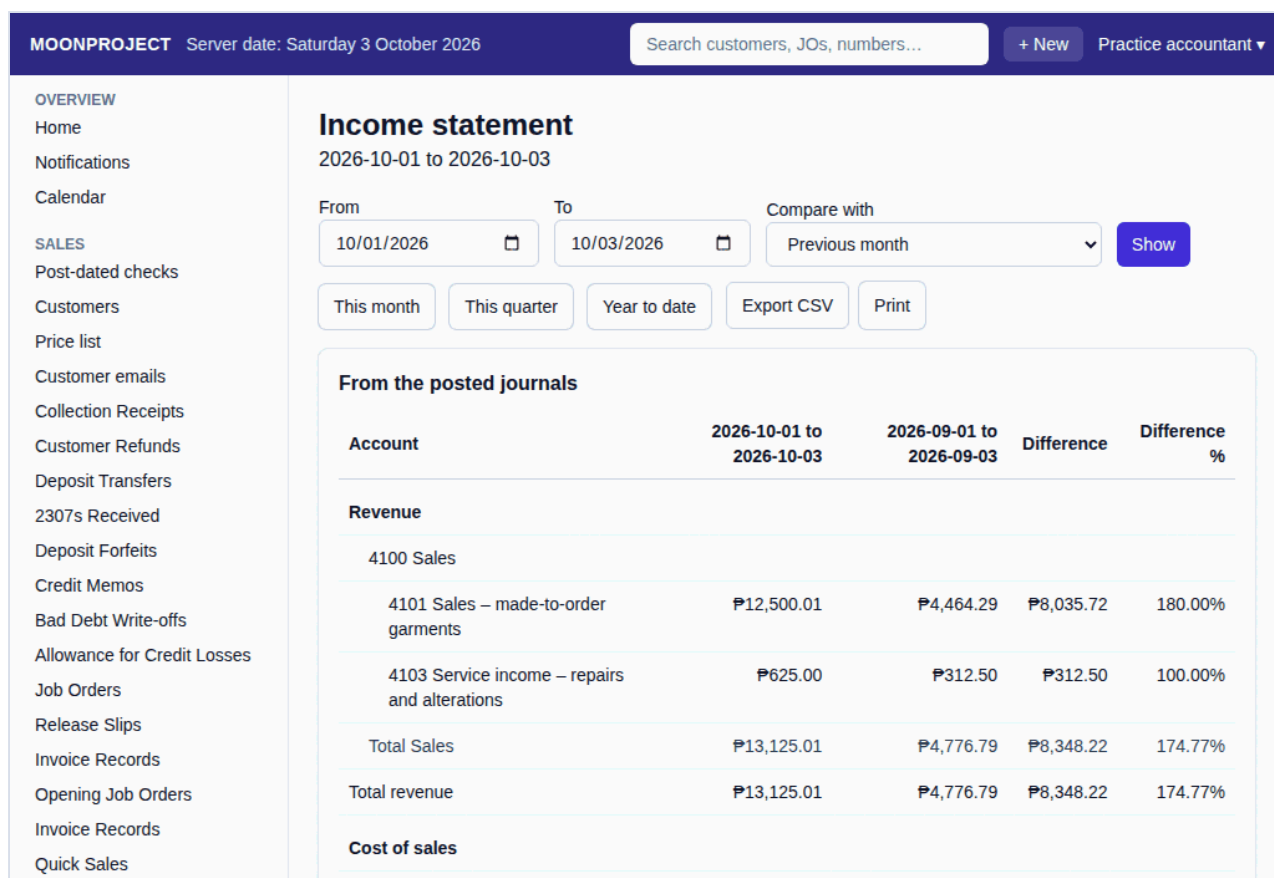

Guide 54. Comparing Statements

What it is for: View the income statement or balance sheet for a certain period alongside the previous month or the same period last year to see how the business is doing over time.

Before you start: Know whether you want to look at the income statement or the balance sheet, the dates you are interested in, and what period you want to compare it to.

Steps

1. On the **Reports** menu, click **Income statement** or **Balance sheet**.
2. If you chose the income statement, check the **From** and **To** dates (it opens on 1 January to today). You can also click **This month**, **This quarter** or **Year to date**. If you chose the balance sheet, check the **As of** date (it opens on today).
3. Under **Compare with**, pick **Previous month** or **Same period last year**. (**None** shows the statement on its own.)

Cost of sales				

The income statement compared with the previous month · Owner-guide screenshot

4. Click **Show** (the quick buttons on the income statement show straight away).

What the system does for you

It shows the statement with two columns of amounts side-by-side. The first column is the period you asked for, and the second column is the period you chose to compare it to. Each column is headed with its dates.

It also adds two more columns:

- **Difference:** How much the amount went up or down compared to the earlier period.
- **Difference %:** The difference shown as a percentage of the earlier amount.

If the amount in the earlier period was zero, the **Difference %** is left blank, because you cannot work out a percentage change from nothing. Amounts in brackets are negative.

You can click **Export CSV** to download a copy of the numbers to open in Excel, or click **Print this page** to get a paper copy.

Common mistakes and how to fix them

- **Mistake:** You picked a comparison under **Compare with** but the screen still shows one column.
- **Fix:** Click **Show** again after choosing. The comparison only appears after **Show** (or a quick button on the income statement).
- **Mistake:** **Show** on the income statement is off.
- **Fix:** Fill in both **From** and **To**, and make sure **From** is not after **To**. On the balance sheet, fill in **As of**.

Guide 49. Cash flow statement

What it is for: View where your cash came from and where it went. It groups the money movements into three groups: **Operating activities**, **Investing activities**, and **Financing activities**.

Before you start: You will need to know the date range you want to look at.

Steps

1. On the **Reports** menu, click **Cash flow statement**. This opens the page loaded from the first of this month to today.

The screenshot shows the Moonproject interface with the 'Statement of cash flows' report. The report is for the period 2026-10-01 to 2026-10-03. The 'From' date is 10/01/2026 and the 'To' date is 10/03/2026. The report is titled 'Direct method — from the posted journals'. The table shows the following data:

Cash flow	Amount
Opening cash	₱111,029.65
Operating activities	
Collections from customers	₱19,100.00
Payments to suppliers and for expenses	(₱1,500.00)
Other operating payments	(₱3,000.00)
Net cash from operating activities	₱14,600.00
Investing activities	
Fixed assets bought	(₱20,000.00)
Net cash from investing activities	(₱20,000.00)
Financing activities	

The cash flow statement · Owner-guide screenshot

2. To change the dates, type the **From** and **To** dates.
3. Click **Show** (it will be off if **From** is after **To**).

What the system does for you

Under **Direct method — from the posted journals**, it shows **Opening cash**, followed by the three activity groups. Each group ends with the net cash from those activities.

It then shows the **Net change in cash** and the **Closing cash**. Finally, it shows the **Cash accounts on balance sheet** and the **Check difference**.

When the closing cash agrees with the balance sheet, it will say "Closing cash equals the cash accounts on the balance sheet at [date]."

You can save the statement to your computer by clicking **Export CSV**, or print it by clicking **Print this page**.

Common mistakes and how to fix them

- **Mistake:** The **Check difference** line does not show zero, and there is a warning message.
- **Fix:** "Closing cash does not equal the cash accounts on the balance sheet. Tell the accountant."

Guide 26. Sales and Collections Reports

What it is for: View your sales, collections, deposits, and the status of your job orders.

Before you start: Know the dates you want to check. *Note: Owners, accountants and encoders have access to these reports by default.*

Steps

1. On the **Reports** menu, choose **Deposits held**, **Collections register**, **Sales by period**, or **Job order follow-up**.

The screenshot shows the Moonproject interface. The top header includes the logo, server date (Saturday 3 October 2026), a search bar, and a '+ New' button. The left sidebar lists various report categories: OVERVIEW (Home, Notifications, Calendar) and SALES (Post-dated checks, Customers, Price list, Customer emails, Collection Receipts, Customer Refunds, Deposit Transfers, 2307s Received, Deposit Forfeits, Credit Memos, Bad Debt Write-offs, Allowance for Credit Losses, Job Orders, Release Slips, Invoice Records, Opening Job Orders, Invoice Records, Quick Sales). The main content area is titled 'Collections register' for the period '2026-10-01 to 2026-10-03'. It features filters for 'From' (10/01/2026) and 'To' (10/03/2026) dates, with buttons for 'Show', 'Export CSV', and 'Print'. Below the filters, a summary shows 'Tenders ₱19,100.00'. A table lists individual transactions with columns for Date, Collection (with a link), Customer, Cash place, Tender, CWT, Recorded by, and Status. All entries are marked as 'posted'.

Date	Collection	Customer	Cash place	Tender	CWT	Recorded by	Status
2026-10-01	COL-000085	Practice Customer 1	Practice counter till	₱2,500.00	₱0.00	Practice encoder	posted
2026-10-01	COL-000086	Practice Customer 1	Practice counter till	₱2,500.00	₱0.00	Practice encoder	posted
2026-10-01	COL-000087	Practice Customer 1	Practice counter till	₱350.00	₱0.00	Practice encoder	posted
2026-10-02	COL-000088	Practice Customer 2	Practice counter till	₱2,500.00	₱0.00	Practice encoder	posted
2026-10-02	COL-000089	Practice Customer 2	Practice counter till	₱2,500.00	₱0.00	Practice encoder	posted
2026-10-02	COL-000090	Practice Customer 2	Practice counter till	₱350.00	₱0.00	Practice encoder	posted
2026-10-03	COL-000091	Practice Customer 1	Practice counter till	₱3,000.00	₱0.00	Practice Owner	posted

The collections register · Owner-guide screenshot

2. If the report needs dates, choose the **As of** date, or choose the **From** and **To** dates.
3. Click **Show**.
4. To view the source record for an entry, click the document number on a row to open it.

What the system does for you

It automatically builds the reports from your saved records.

Each report helps you track your business:

- **Deposits held:** Shows money held for customers.

- **Collections register:** Shows all money received. It totals the amounts **By cash place** and **By recorder**.
- **Sales by period:** Shows your net sales. It breaks down the amounts **By period**, **By customer**, **By item**, and **By garment type**.
- **Job order follow-up:** Tracks the progress of your orders. It groups them **By status** and lists all **Job orders**. It also highlights orders **Released with a balance** and **Release records awaiting invoice**.

To save the information to your computer, click **Export CSV**.

Common mistakes and how to fix them

- **Mistake:** You cannot find the reports on the menu.
- **Fix:** Owners, accountants and encoders can open these reports by default. If a report is missing, ask the owner to check **Roles and permissions**.
- **Mistake:** You want to fix a wrong amount on a report by deleting a record.
- **Fix:** You cannot delete records in the system. Fix mistakes by canceling and redoing the incorrect document.

Guide 38. Reports and BIR books

What it is for: View lists and summaries of the shop's data to answer everyday questions, spot problems early, and print out the BIR books for tax records.

Before you start: Know what you are looking for. You will often need to put in a date, a month, a year, or a "From" and "To" date range.

Steps

1. Open the report you want under **Reports**. It loads automatically (using this month, or today for reports asking for **As of**).

The Unpaid supplier bills (AP aging) report · Owner-guide screenshot

2. If you want a different date, pick the dates.
 - **Purchase orders by status, Received but not billed, Late entries and Cancellations and reissues** do not have date boxes and no **Show** button.
 - **Unpaid supplier bills (AP aging), Cash position, Fixed-asset schedule, and Exceptions** use **As of**.
 - **Purchases by supplier/category, Transfers report, Cash counts, and Sign-in history** use **From** and **To**.
 - The **Customer statement** also needs a customer first.
3. Click the **Show** button to reload the numbers with your new dates.

4. To keep a copy, click **Print this page**, or click **Export CSV** to download a spreadsheet file.

To open the BIR books:

1. Open **BIR books** under **Reports**. It starts with the **From** and **To** dates filled in from the first of this month to today.

The screenshot shows the Moonproject interface. The top bar includes the Moonproject logo, server date (Saturday 3 October 2026), a search bar, and buttons for '+ New' and 'Practice accountant'. The left sidebar lists various reports under 'OVERVIEW' and 'SALES'. The main area is titled 'BIR books — Cash receipts journal' for the period 2026-10-01 to 2026-10-03. It features a 'Book' dropdown set to 'Cash receipts journal', 'From' and 'To' date pickers (10/01/2026 to 10/03/2026), and buttons for 'Export CSV', 'Print', and 'Print loose-leaf'. A 'Show' button is also present. Below these controls, it states 'Nothing printed yet in 2026'. The table below shows the journal entries for Page 1.

Date	Document	BIR form / reference	Party	Cash	Receivables	Deposits	VAT	Sales / other income	Sundry
2026-10-01	COL-000085	10058	Practice Customer 1 (Fictional)	₱2,500.00	₱0.00	₱2,500.00	₱0.00	₱0.00

The BIR books screen · Owner-guide screenshot

2. From the **Book** box, pick **Cash receipts journal**, **Cash disbursements journal**, **Sales journal**, **Purchase journal**, **General journal**, or **General ledger**.
3. If you want a different range, fill in the **From** and **To** dates.
4. Click the **Show** button. (The button stays off until both dates are filled and **From** is not after **To**).

What the system does for you

It gathers all the documents and journals and lines them up based on the report you picked.

To answer everyday questions:

- **Who owes us?** Look at the **Unpaid customer balances (AR aging)** report and the **Customer statement**.
- **What we owe suppliers?** Check the **Unpaid supplier bills (AP aging)** and **Purchases by supplier/category**.
- **How much cash is where?** View the **Cash position** and **Cash counts**.
- **What are the fixed assets worth?** Look at the **Fixed-asset schedule**.

- **Payroll and production:** Check the **Payroll register** for pay details. Use the **Production status counts**, **Production throughput**, **Worker output**, **Late job orders**, and **Job order lead time** to see how the shop floor is moving.

Control reports:

- **Late entries:** Lists journal vouchers and opening entries that were made on a later day than their date.
- **Cancellations and reissues:** Lists documents that were cancelled or reissued.
- **Exceptions:** Lists things to look at: a release with no invoice record, a cash place below zero, a draft older than 3 days, and miscellaneous expenses above 10% for the month.

For the accountant and taxes:

The BIR books screen shows pages each headed with a page number like **Page 1**, **Page 2**, and so on. **Brought forward** shows from page 2, and **Carried forward** shows at the foot of every page. You can click the **Print this page** button for a copy, or click **Export CSV** to download a spreadsheet file to send to the accountant. To print pages for the binder, click **Print loose-leaf** (it needs **From** and **To** in the same year). The screen shows the last page printed for that year, so the next print carries on from there.

Common mistakes and how to fix them

- **Mistake:** You cannot see the **Reports** menu or the specific report you need.
- **Fix:** You do not have permission. Ask the owner to update your role so you can view reports.
- **Mistake:** The screen says "Access denied."
- **Fix:** Your login may not view the books or certain reports like payroll. The owner can change what your role may do under **Roles and permissions**.
- **Mistake:** You cannot click the **Show** button on the BIR books screen.
- **Fix:** The **Show** button is disabled until both **From** and **To** dates are set correctly.

Guide 50. Printing statements and schedules

What it is for: Print important documents like a customer's statement of account, a wearer's sizing profile, or the fixed asset schedule.

Before you start: Make sure you have a working printer connected to your computer.

Steps

To print a customer's statement of account:

1. On the **Reports** menu, click **Customer statement**.
2. Pick the customer in the **Customer** field (it starts as "Choose a customer").
3. Type the **From** and **To** dates.
4. Click **Show** (this button stays off until a customer and both dates are set, and **From** is not after **To**).

A customer's statement of account on screen · Owner-guide screenshot

5. When the report is showing, click **Print statement of account**.

To print a wearer's sizing profile:

1. Click **Sales**, then **Customers**, then open the customer.
2. In the **Wearers** panel, click on a wearer's name to open their **Measurements**.
3. If the wearer has a current measurement revision and your login may see measurements, click **Print sizing profile**.

To print the fixed asset schedule:

1. On the **Reports** menu, click **Fixed-asset schedule**.
2. Type the **As of** date.
3. Click **Show**.
4. When the report is showing, click **Print fixed asset schedule**.

What the system does for you

The system builds a document ready for printing and opens it in a new window. It gathers all the lines, balances, and totals for statements and schedules. The sizing profile lists Wearer, Customer, Group, Measured on, Upper size, Lower size, a Measurement / Value / Unit table and Remarks. Note that the customer's statement of account will say "THIS DOCUMENT IS NOT VALID FOR CLAIM OF INPUT TAX."

Common mistakes and how to fix them

- **Mistake:** You click the print button but nothing happens, and you see a message saying "Allow pop-ups for this site, then try Print again."
- **Fix:** Allow pop-ups for this site, then try Print again.
- **Mistake:** The print stops with "An owner must complete the company profile before printing."
- **Fix:** An owner must complete the company profile before printing (see guide 44).

Guide 63. Owners' charts and monthly pack

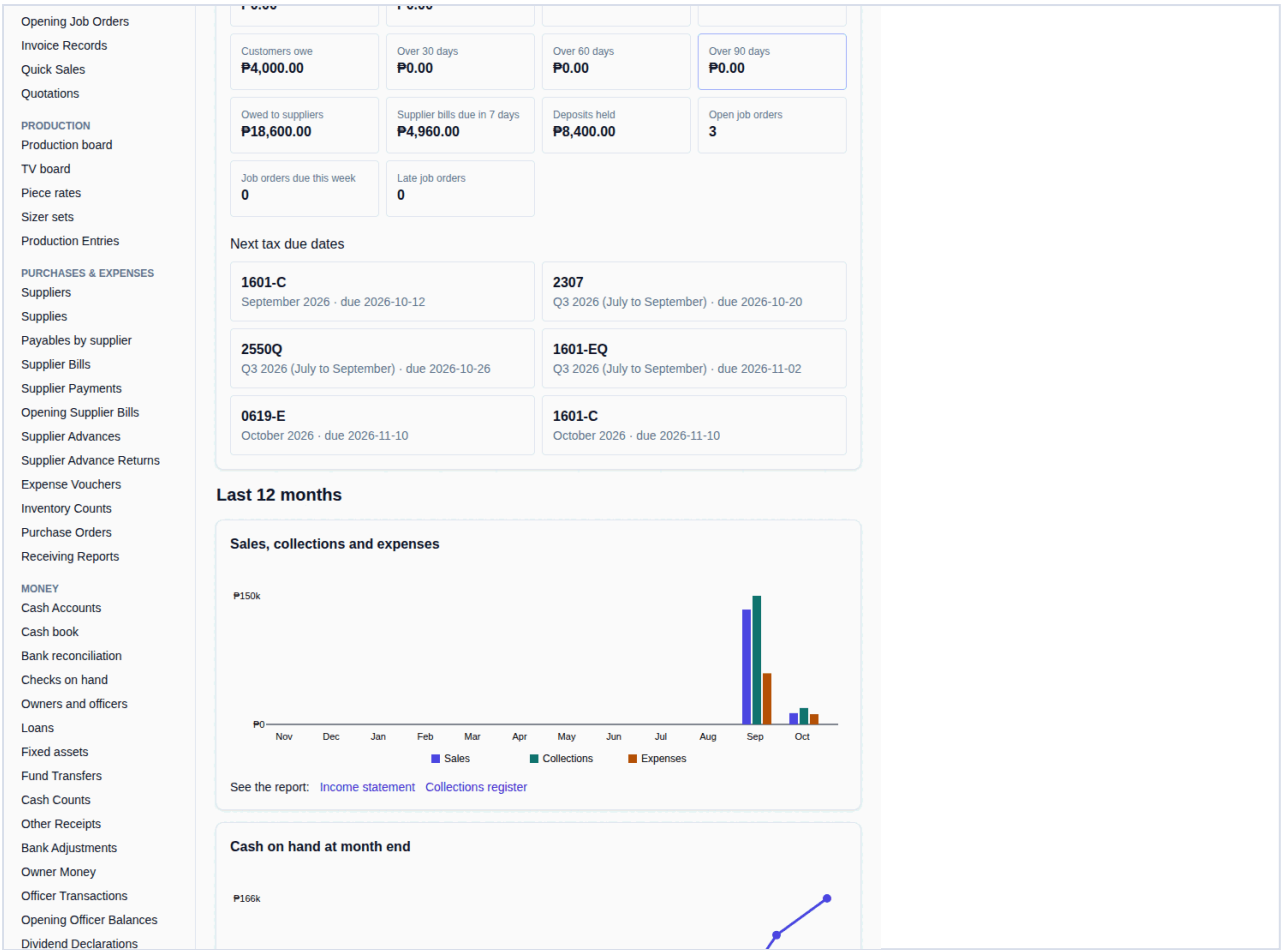

What it is for: See charts of how the business did over the last 12 months, and print a pack of reports for the co-owners' meeting.

Before you start: The charts show only on an owner's **Home** who may view the books. To print the pack, you need to be allowed to view the books.

Steps

To see the charts:

- 1. On the **Overview** menu, click **Home**.

The charts on the Home screen · Owner-guide screenshot

- 2. Look under **Last 12 months:**
 - **Sales, collections and expenses:** bars for each month's sales, money collected, and expenses. Point at a bar to see the amount. Click **Income statement** or **Collections register** to see the report.
 - **Cash on hand at month end:** a line of the money in all cash places at the end of each month (this month: today). Click **See the report** for the cash position.
 - **Receivables by age today:** what customers owe, by how many days overdue (**Current, 1–30, 31–60, 61–90, Over 90**). Click **See the report** for the Unpaid customer balances (AR aging).

To print the monthly pack:

1. On the **Reports** menu, click **Monthly owners' pack**.
2. Under **Prepare the co-owners' meeting pack**, pick the **Month**.
3. Click **Print owners' pack**.

What the system does for you

The charts are worked out from the books each time you open **Home**. The pack is one A4 printout with the financial statements, cash flow, receivables, payroll cost and job-order activity for the month, side by side with the month before. It opens ready to print.

Common mistakes and how to fix them

- **Mistake:** A month in the charts shows nothing.
- **Fix:** Nothing was recorded in that month, like the months before you started using Moonproject.
- **Mistake:** You do not see the charts or **Monthly owners' pack**.
- **Fix:** The charts are only for owners, and both need permission to view the books. Ask the owner to check your role.

Admin and Safety

Guide 35. Users, Roles and Passwords

What it is for: Manage the staff logins for the system. You can add new users, reset forgotten passwords, switch off old logins, and change what each role is allowed to do.

Before you start: You must be signed in as the owner. Know the name, username, and role of the person you are adding.

Steps

To add a new staff member:

1. On the **Admin** menu, click **Users**.

Changes here ask for your password again. A deactivated user is signed out at once and keeps their history: nothing is ever deleted.

The Users screen · Owner-guide screenshot

2. Click **Add a user**.

MOONPROJECT Server date: Saturday 3 October 2026

Search customers, JOs, numbers... + New Practice Owner ▼

Add a user

Name to show *

Username *

What they type to sign in.

Roles

- ☐ Encoder Records day-to-day sales, collections and expenses.
- ☐ Accountant Books, taxes and settings.
- ☐ Owner Everything the owner role is given, including these screens.
- ☐ Production Sees and assigns production work.
- ☐ TV board Read-only board for the shop TV.

Temporary password *

Show

At least 15 characters, for example three or four words, not containing the username. They must change it at first sign-in.

Go back Add user

The Add a user box · Owner-guide screenshot

3. Type the **Name to show** and the **Username**.
4. Tick the roles they need.
5. Type a **Temporary password**. It must be at least 15 characters, for example three or four words, and must not contain the username. You can click **Show** to see what you type.
6. Click **Add user**. Give the person the temporary password. They must change it the first time they sign in.

To change someone's roles:

1. On the **Users** screen, click **Change roles** next to their name.
2. Tick or untick the roles.
3. Click **Save roles**.

To reset a forgotten password:

1. On the **Users** screen, click **Reset password** next to their name.
2. Type a **New temporary password**. It must be at least 15 characters, for example three or four words, and must not contain the username. You can click **Show** to see what you type.
3. Click the **Reset password** button to save. They are signed out everywhere and must use this password to sign back in, then pick a new one.

To switch off a login when someone leaves:

1. On the **Users** screen, click **Deactivate** next to their name. You cannot deactivate yourself.

2. A box titled **Deactivate (name)?** will appear. Click the **Deactivate** button to confirm. They are signed out at once. If they come back, you can click **Activate** later.

To change what a role can do:

1. On the **Admin** menu, click **Roles and permissions**.
2. Under **What they may do**, tick or untick the boxes for a role.
3. Scroll down and click **Save** (or **Save (X)**) under that role's column.

What the system does for you

The system keeps a safe history of everyone's actions. It never deletes old users; deactivating them just stops them from signing in, so their old work stays linked to their name. Adding a user, changing roles, resetting a password, deactivating or activating a user, and saving a role's column each open a **Confirm with your password** box. Just type your **Password** and click **Continue** to prove it is really you.

Common mistakes and how to fix them

- **Mistake:** You tick a box to take away a permission from the owner role, and the system warns you.
- **Fix:** Do not take away the permissions the owner needs to keep the shop running. If you do, nobody will be able to manage users or put the permission back. If you get the warning, click **Go back**. Only click **Take it away anyway** if you are absolutely sure.
- **Mistake:** You set up a role with the wrong permissions.
- **Fix:** Just go back to **Roles and permissions**, change the ticks, and save again. The **Save (X)** button shows how many changes are waiting, and nothing changes until you save each role's column.

Guide 11. Backups

What it is for: Set up the recovery keys needed to unlock your system's backups, tell the system where to save backups, and make copies of your backups to a USB drive.

Before you start: Do this in the real shop (no yellow "PRACTICE SHOP" band at the top). The practice shop has no backups, so there the screen says "Backups and restores are not part of the practice shop." You will need a printer to print your new recovery keys. Know the folder on the server PC (the computer Moonproject runs on) where you want to keep the backups, and have an off-site folder ready (like a Google Drive for desktop folder) if you want to keep copies there. You should also have two USB flash drives, Drive A and Drive B, to swap out weekly. The USB drive goes into the server PC.

Steps

1. On the **Admin** menu, click **Backups**.
2. Click the **Recovery keys and folders** tab.
3. Type the **Backup folder** where you want to save backups on the server PC.

The screenshot shows the Moonproject web interface. The top navigation bar is dark blue with 'MOONPROJECT' on the left, 'Server date: Saturday 3 October 2026' in the center, and a search bar on the right. Below the navigation bar is a sidebar menu with categories: OVERVIEW (Home, Notifications, Calendar), SALES (Post-dated checks, Customers, Price list, Customer emails, Collection Receipts, Customer Refunds, Deposit Transfers, 2307s Received, Deposit Forfeits, Credit Memos, Bad Debt Write-offs, Allowance for Credit Losses, Job Orders, Release Slips, Invoice Records, Opening Job Orders, Invoice Records, Quick Sales), and a 'Backups' section. The main content area is titled 'Backups' and has four tabs: Status, Recovery keys and folders (selected), USB copy, and Restore and drill. Under the 'Recovery keys and folders' tab, there are two sections. The 'Folders' section has a 'Backup folder *' input field containing 'D:\Moonproject-Backups', with a note 'On this PC, for example D:\Moonproject-Backups.' Below it is an 'Off-site folder' input field, with a note 'The Google Drive for desktop folder. The daily, monthly and yearly backups are copied there. Leave it blank for none.' The 'Recovery keys' section has a message 'No recovery keys yet, so backups are off.' and a 'Make new recovery keys' button. At the bottom of the 'Recovery keys' section, there is a note 'Make the recovery keys first.' and a 'Save the folders' button.

The Recovery keys and folders tab of Backups · Owner-guide screenshot

4. If you have an **Off-site folder**, type its location too.
5. Click **Make new recovery keys**. The system will show you two keys, Key A and Key B.
6. Click **Print key A** and **Print key B**, or write the keys down exactly. Keep Key A with you (the owner) and seal Key B in a safe place away from the shop.

7. To prove you saved them, look at the printed sheets and type the **Last 8 characters of key A** and the **Last 8 characters of key B** back into the screen.
8. Click **Save the folders and the new keys**.
9. Type your password in **Enter your password again to continue** and click **Continue**.
10. To make a USB copy, plug your USB drive (either Drive A or Drive B) into the server PC.
11. Go to the **Admin** menu, click **Backups**, and go to the **USB copy** tab.
12. Choose the **Drive** you are using (**Drive A** or **Drive B**).
13. Type the **Folder on the drive** where you want to save the backup (for example, E:\Moonproject - Backups).
14. Click **Copy to drive A** (or **Copy to drive B**).
15. Unplug the drive and take it away from the shop. Next week, swap it for the other drive.

What the system does for you

It keeps your backups completely locked. Without one of your printed recovery keys, nobody can open your backups. It runs automatic backups (daily, monthly, and yearly) and tells you the status on the **Status** tab. When you make a USB copy, the system automatically adds the new backups that the drive does not have yet.

Common mistakes and how to fix them

- **Mistake:** You threw away old recovery keys after making new ones, but you still have yearly backups that were locked with the old keys.
- **Fix:** Do not throw away old recovery keys until you no longer need any backups that were locked with them. Yearly backups are kept forever, so you should keep the old keys as long as you keep those yearly backups.
- **Mistake:** The **Status** tab warns you that backups are stale.
- **Fix:** This means no backup has worked for a while. The **Status** tab's **Last runs** table gives the reason each backup failed. Fix that, then click **Back up now** to check. Also note that with no recovery keys, backups are off.

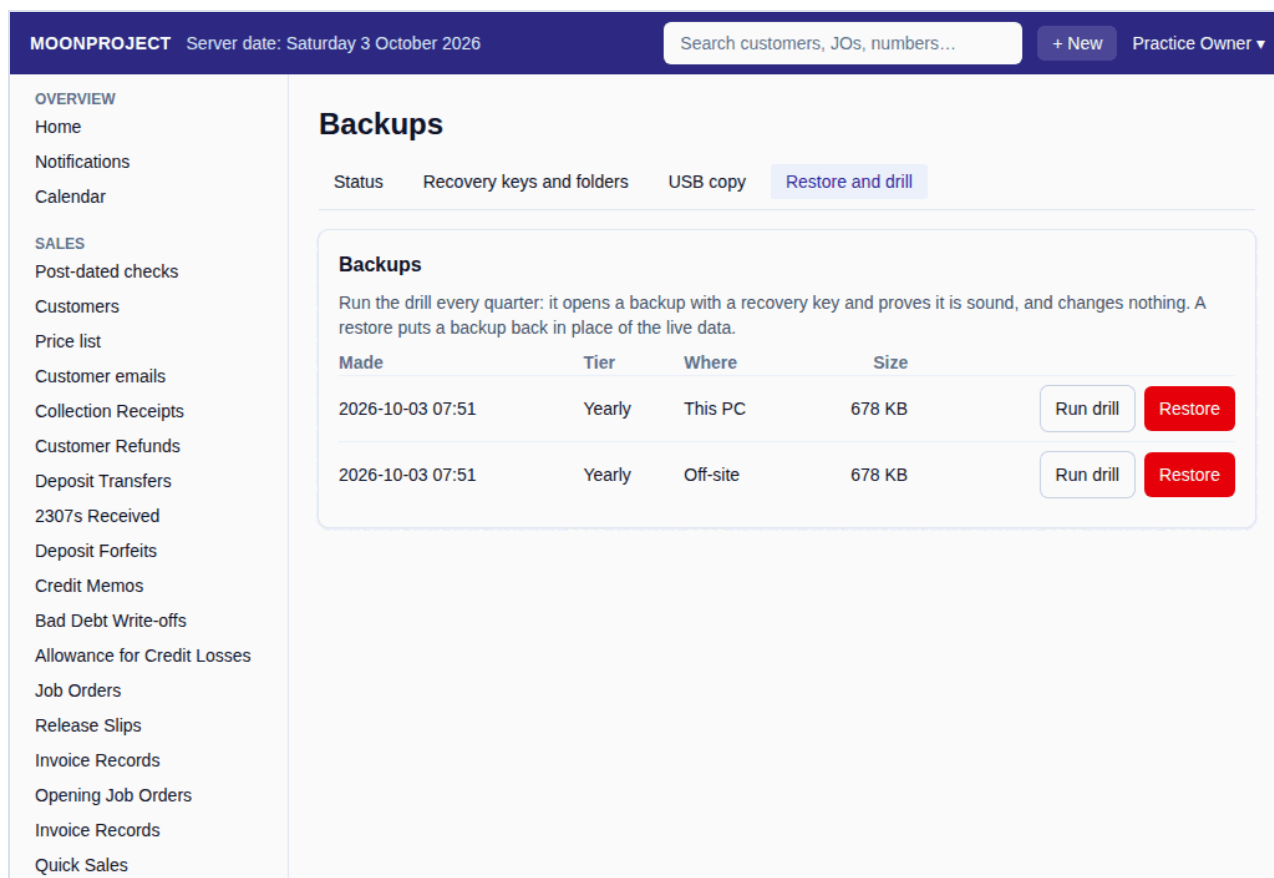

Guide 12. Restore from a Backup

What it is for: Prove your backups work by running a test (a "drill") every quarter, or put a backup back into the live system if something goes wrong.

Before you start: Do this in the real shop (no yellow "PRACTICE SHOP" band at the top). The practice shop has no backups, so there the screen says "Backups and restores are not part of the practice shop." Have your printed Recovery Key A or Key B ready. The system will not let you open any backup without typing one of them. For a drill, nothing changes in the system. For a real restore, know that anything typed into the system after the backup was made will be lost.

Steps

1. On the **Admin** menu, click **Backups**.
2. Click the **Restore and drill** tab.

The screenshot shows the Moonproject web interface. The top navigation bar includes the Moonproject logo, server date (Saturday 3 October 2026), a search bar, and user controls (+ New, Practice Owner). The left sidebar lists various menu items under OVERVIEW, SALES, and other categories. The main content area is titled 'Backups' and has four tabs: Status, Recovery keys and folders, USB copy, and 'Restore and drill' (which is active). Below the tabs, there is a section titled 'Backups' with a descriptive text: 'Run the drill every quarter: it opens a backup with a recovery key and proves it is sound, and changes nothing. A restore puts a backup back in place of the live data.' Below this text is a table with columns: Made, Tier, Where, Size, and two action buttons (Run drill and Restore). The table contains two rows of backup data.

Made	Tier	Where	Size	Run drill	Restore
2026-10-03 07:51	Yearly	This PC	678 KB	<button>Run drill</button>	<button>Restore</button>
2026-10-03 07:51	Yearly	Off-site	678 KB	<button>Run drill</button>	<button>Restore</button>

The Restore and drill tab, with a list of backups · Owner-guide screenshot

3. You will see a list of backups. Pick one and click **Run drill** (or **Restore** for emergencies).
4. Type your **Recovery key A or B** exactly as printed on your sheet.
5. Click **Open the backup**.
6. Type your password in **Enter your password again to continue** and click **Continue**.
7. If you ran a drill, the system checks that the backup is completely sound, changes nothing in your live data, and records that you successfully did your drill.

8. If you chose Restore, the system checks the backup and shows you exactly what you will lose if you continue. For each document series it shows the last number now and the last number in the backup: the numbers issued after the backup will be issued again to new documents, so mark or set aside any printed or sent copies with those numbers. The current data is kept safe for now.
9. To confirm the restore, type RESTORE in capital letters in **Type RESTORE to go ahead.**
10. Click **Restore this backup.**
11. Type your password in **Enter your password again to continue** and click **Continue.**
12. Everyone should save their work and sign out first, then restart Moonproject to finish the restore.

What the system does for you

It keeps your backups completely safe by asking for the recovery key, and it prevents you from making a mistake by holding the live data to the side while you check the backup. It shows you the trial balance and how many documents are in the backup, so you know exactly what you are restoring.

Common mistakes and how to fix them

- **Mistake:** You typed your recovery key, but the system says it is wrong.
- **Fix:** Correct the key in the box (spaces and small letters do not matter) and click **Open the backup** again. If it still does not open, try the other key. The system never saves your key, so you must get it right.
- **Mistake:** You changed your mind about restoring a backup after clicking **Open the backup.**
- **Fix:** Change your mind before clicking **Restore this backup**: click **Back to the list**, and nothing changes. The system allows 30 minutes between opening the backup and clicking **Restore this backup**. Once **Restore this backup** is clicked, nothing in the app takes it back, and the restore happens at the next restart.

Numbers issued again after a restore

What it is for: Avoid mistaking an old printed copy for a new document after restoring an earlier backup.

Before you start: Stop recording and have the owner and accountant compare the backup with the live shop. Keep the latest backups and printed or sent copies.

Steps:

1. Follow **Restore and drill > Restore > Open the backup** above.
2. Before confirming, read **Series, Last number now, Last in the backup** and **Issued again.**
3. Mark or set aside the affected printed and sent copies. Tell staff which numbers are affected.
4. Only after the loss and reused numbers are understood, type RESTORE and use **Restore this backup**. Everyone signs out before the restart.

What the system does: The backup restores the earlier number counters as well as the books. Numbers issued since the backup can be issued again to new documents. The current data is kept next to the restored data.

Common mistakes: **Run drill** checks the backup without replacing the live shop. Do not choose **Restore** just to test a backup. Before confirmation, **Back to the list** leaves the live data alone; after confirmation there is no in-app undo.

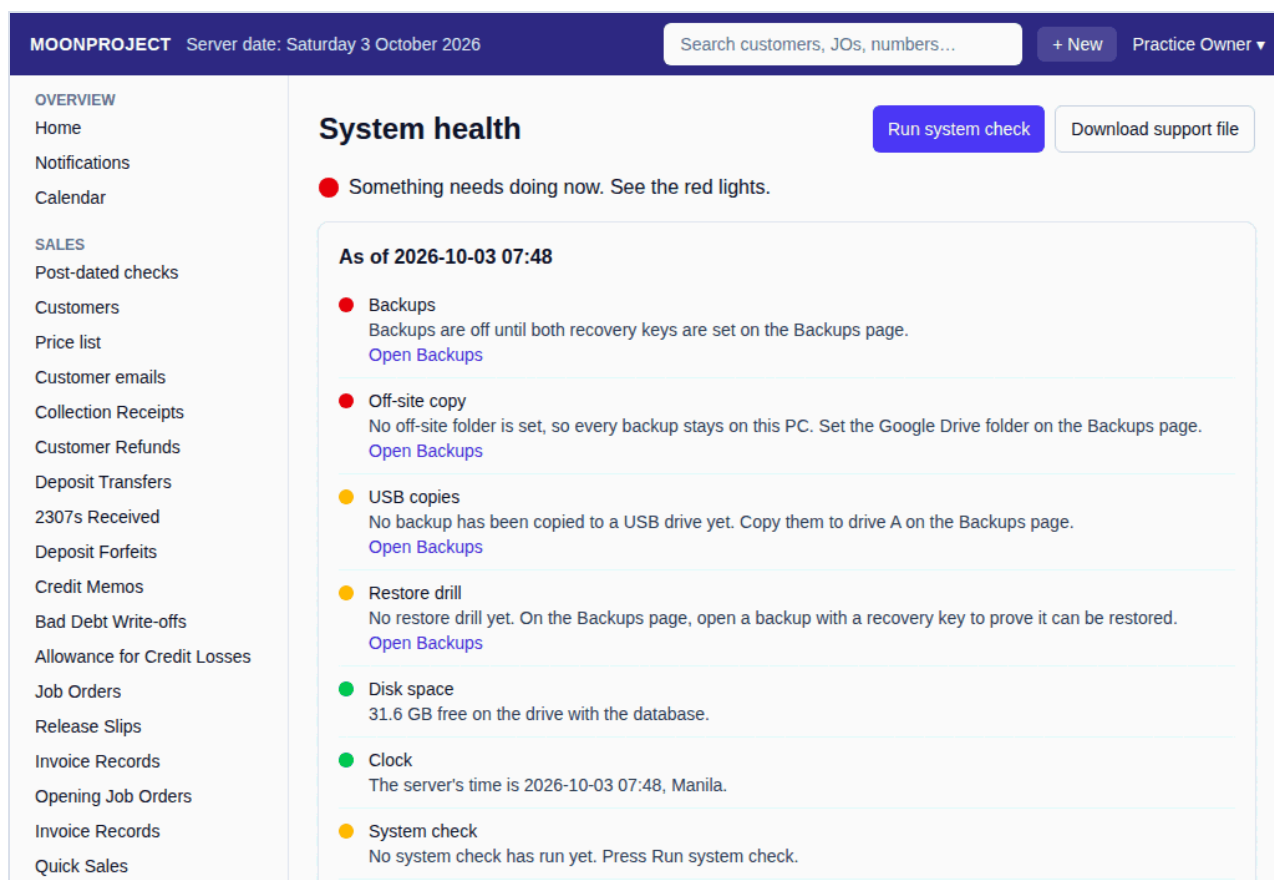

Guide 25. System Health

What it is for: Monitor the health of the system and see if anything needs your attention to keep the shop's books safe.

Before you start: You must have the `sec.health.view` permission (which is normally given to the owner) to open the **System health** screen.

Steps

1. On the **Admin** menu, click **System health**.

The System health screen with its lights · Owner-guide screenshot

2. Look at the top light to see the overall health.
 - **Green:** Everything is in order.
 - **Amber:** Something needs doing soon. See the amber lights below.
 - **Red:** Something needs doing now. See the red lights below.
3. Read the message for any light that is not green, and click its link to fix it.

What the system does for you

It checks different parts of the system and gives you a traffic light for each:

- **Backups:** Checks if backups are on and running. If not green, click **Open Backups** and back up now or set the recovery keys.
- **Off-site copy:** Checks if backups reach the off-site folder. If not green, click **Open Backups** and check that Google Drive is signed in and syncing.
- **USB copies:** Checks if backups are copied to USB drives. If not green, click **Open Backups** and copy the backups to the USB drive, then swap the drives.
- **Restore drill:** Checks if a restore drill was done recently. If not green, click **Open Backups** and open a backup with a recovery key to prove it can be restored.
- **Disk space:** Checks free space on the drive with the database. If not green, free up space so the books and backups have room.
- **Clock:** Checks if the server's clock is correct and in the right time zone. If not green, fix the time and time zone in the Windows settings.
- **System check:** Checks if a system check ran recently. If not green, press **Run system check**.
- **Database:** Checks if the database file is sound. If not green, stop recording, keep the latest backups and call for help.
- **Books:** Checks if journals and ledgers balance. If not green, click **Open Integrity check** for the details.
- **Audit trail:** Checks if the audit trail is intact. If not green, click **Open Integrity check**, stop recording, keep the latest backups and call for help.
- **Windows:** Checks if Windows is up to date (Windows 11). If not green, plan the move to Windows 11.
- **Practice shop:** Checks if the practice shop is ready. If not green, click **Open Practice shop**.
- **Version:** Shows the Moonproject version and tells you updates come as a new Setup.exe run on this PC.

The **Run system check** button lets you check the database, books, and audit trail right now. A system check runs every night by itself.

The **Download support file** button saves a file with the version, these lights, and some counts. It holds no names, amounts, or file paths of the shop, so it is safe to send to whoever helps with the PC.

Common mistakes and how to fix them

- **Mistake:** You ignore a red light for a long time.
- **Fix:** Do not wait to fix red lights. Red lights mean something is wrong that puts your data or books at risk.
- **Mistake:** You ignore the warning to swap the USB drive.
- **Fix:** Go to **Open Backups**, copy the backups to the USB drive, and then swap the drives as instructed so you always have a recent offline copy.

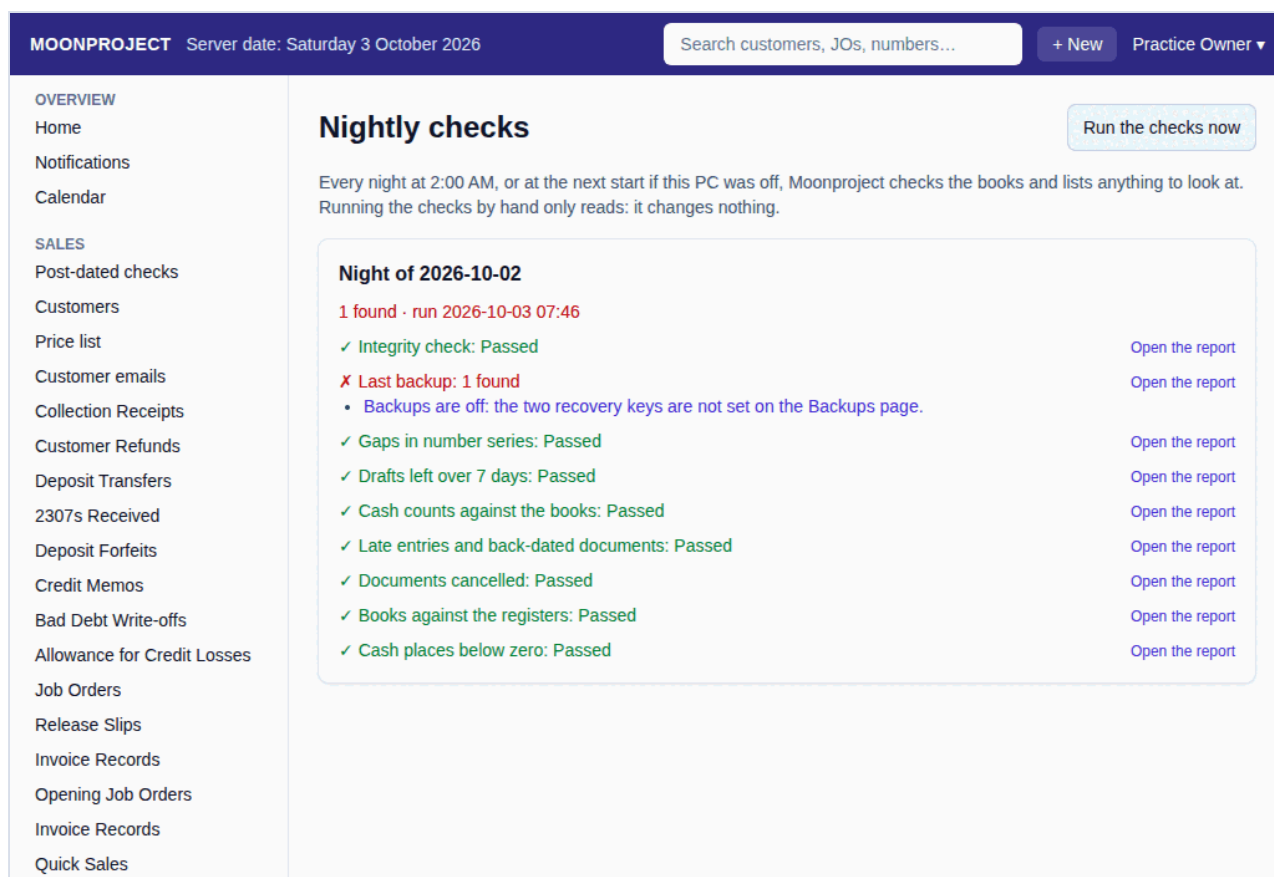

Guide 56. Nightly checks

What it is for: View the status of the nightly checks and run them now.

Before you start: Know that the Integrity check is found in the **Admin** menu as **Integrity check**.

Steps

1. On the **Admin** menu, click **Nightly checks**.

The Nightly checks screen · Owner-guide screenshot

2. To check right now, click **Run the checks now** (only people with that permission, usually the owner, see this button). The button shows **Checking...**, then a box called **Checked just now** appears with the results.
3. Each earlier run is a box called **Night of** and the date. To see more of them, click **Show older nights**.

What the system does for you

Every night at 2:00 AM, or at the next start if this PC was off, Moonproject checks the books and lists anything to look at. Running the checks by hand only reads: it changes nothing.

It checks:

- Integrity check
- Last backup

- Gaps in number series
- Drafts left over 7 days
- Cash counts against the books
- Late entries and back-dated documents
- Documents cancelled
- Books against the registers
- Cash places below zero

Each check has a green ✓ and **Passed**, or a red ✗ and a number such as **3 found**. A night with nothing found says **Everything passed**; otherwise it says how many were **found**. If no check has run yet, you see **No nightly check has run yet. The first one runs at the next 2:00 AM**. Click **Open the report** next to a check to see more details.

Common mistakes and how to fix them

- **Mistake:** You see **Access denied**.
- **Fix:** You do not have permission to see this page. Ask the owner.
- **Mistake:** You see a red ✗ with a number and **found** next to a check.
- **Fix:** Click the lines under it to look at each one, or **Open the report**. Tell your accountant or IT person if you cannot fix it. The same news shows on Home as **Last night's checks (...) found ... to look at**.

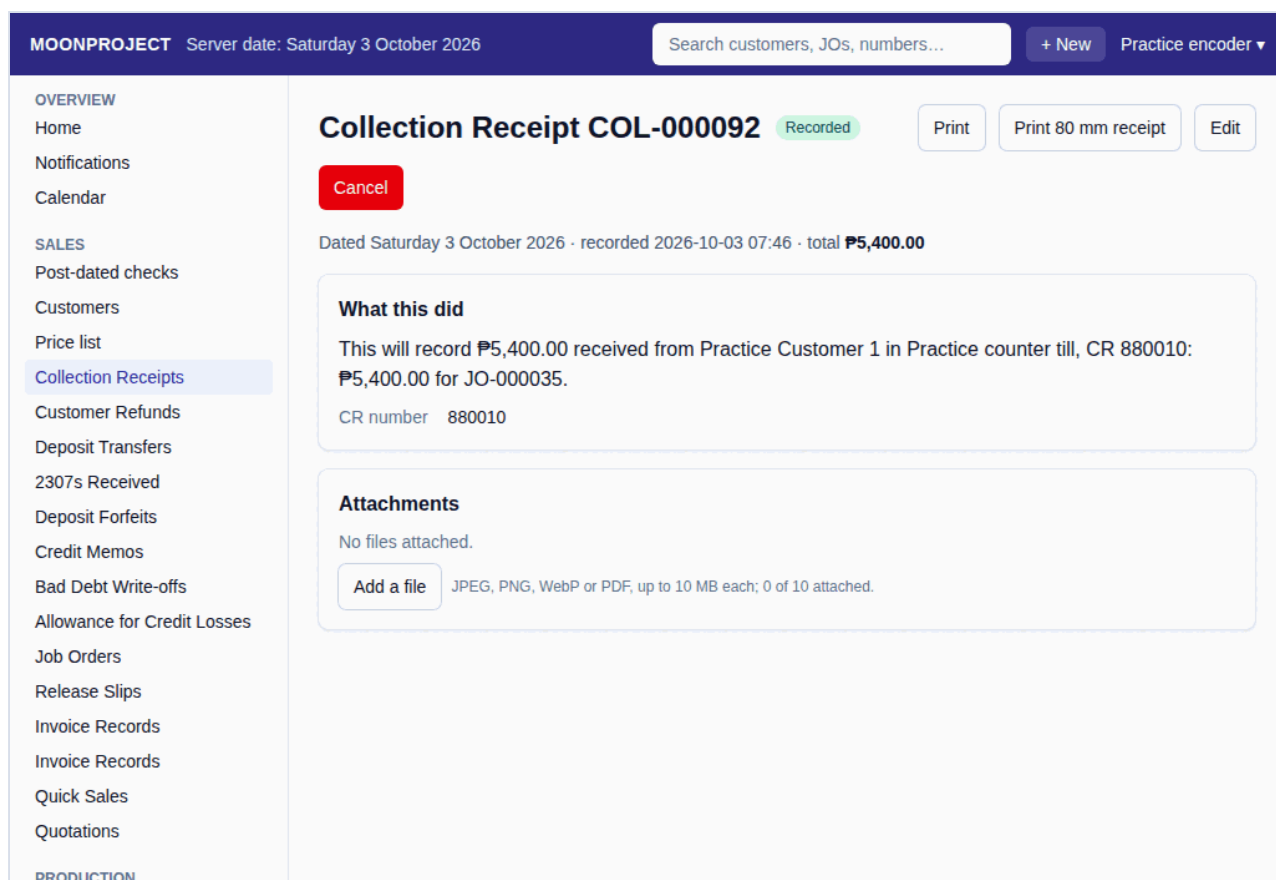

Guide 58. Attachments

What it is for: Attach a photo or a PDF to a recorded document, like a signed form, a receipt, or a picture of a job order.

Before you start: Have the file saved on your PC, or your phone ready to take a picture. Open the recorded document first.

Steps

1. On the document, find the **Attachments** section (below **What this did**).

The Attachments section of a document · Owner-guide screenshot

2. Click **Add a file** to choose one or more files from your PC. On a phone, you can also tap **Take a photo** to use the camera.
3. To open an attachment, click its file name in the list.
4. To remove an attachment, click **Remove** next to it.
5. In the box **Remove [file name]?**, type a **Reason (at least 10 characters)** and click **Remove**. Click **Go back** if you change your mind.

What the system does for you

It takes only a **JPEG, PNG, WebP or PDF, up to 10 MB each**, and up to 10 attached files per document. The line under the buttons shows how many are attached, like "3 of 10 attached". Each file shows who added it and when. A removed file stays on file, crossed out, with who removed it and the reason, and can

still be opened. Nothing the document recorded changes.

Common mistakes and how to fix them

- **Mistake:** You attached the wrong file.
- **Fix:** Click **Remove** next to it, type a reason like "wrong file attached", and click **Remove**. Then click **Add a file** to attach the right one.
- **Mistake:** You see "[file name] is bigger than 10 MB. Attach a smaller picture or PDF."
- **Fix:** Take a smaller picture, or ask the sender for a smaller PDF.
- **Mistake:** You do not see **Add a file** or **Remove**.
- **Fix:** Only users who may make that kind of document can attach or remove files. Ask the owner.

Guide 20. The Practice Shop

What it is for: Train with made-up data. Nothing you record, print or change reaches the real shop or its books.

Before you start: You must be on a joined phone or PC.

Steps

1. On the **Admin** menu, click **Practice shop**.
2. Click the address link to open it on a joined phone or PC.
3. Sign in with your usual username and password.
4. You will see a yellow band showing you are in practice. Printouts will also say they are not real documents. Backups are not part of it.
5. To start over (owner only), go back to the real shop and open the **Practice shop** page.
6. Click **Start the practice shop over** and type your password. This throws away everything recorded in practice.

What the system does for you

It runs a made-up shop right next to the real one. It keeps them totally apart, so you can train safely.

Common mistakes and how to fix them

- **Mistake:** You do not know if you are working in the real shop or the practice shop.
- **Fix:** Always look for the yellow band at the top. If you see "PRACTICE SHOP", you are safe to practise.

Guide 31. Importing the old data

What it is for: Bring your customers, measurements, employees, and the rest from the old Google sheet into the system. Nothing goes in until you have reviewed the rows and checked the import. Only an owner can import the approved rows.

Before you start: Prepare the old Google sheet. In the old sheet, open a tab and choose File, Download, Comma-separated values (.csv). Save each tab as its own CSV file on your computer, as downloaded. The Labor Rates tab is not needed.

Steps

1. On the **Admin** menu, choose **Import old data**.

The Import old data screen · Owner-guide screenshot

2. To start a new upload, use **Load a copy from the old sheet**. (To go back to an earlier upload, click **Review** on its line under **Uploads**.) Under **What is in the file?**, pick what the file holds, choose the **CSV file**, and click **Load a copy**. The system reads the file but does not import anything yet.
3. Review the staged rows. Only rows with something wrong are listed; rows with nothing wrong go in as they are. Each listed row must be dealt with:
 - If the row is good, click **Accept**. (Accept is only available when nothing is wrong with the row.)
 - If there is a problem, click **Fix**, type the correction, and click **Save the fix and accept**. The system checks the row again.
 - If a row is a duplicate, click **Merge**, pick the row to keep, and click **Merge into that row**.

- If a row should be left out, click **Exclude**, type a reason, and click **Exclude the row**. The reason is shown on the screen while you work, but the system does not keep it.
4. When no row still needs review, look at the **Check the import** section.
- Click **Check the import**.
 - The system counts what would go in and shows **Totals to check against the old sheet**, including what the measurement cells add up to. Nothing is imported.
 - Compare these totals to your old Google sheet. If they do not match, stop and fix the problems. If you change any row, check the import again.
5. Once the import check totals are correct, look at the **Import these approved rows** section. You can only import after the import check, and only an owner can import.
- Click **Import these approved rows**.
 - An "Import these approved rows?" box opens, showing the measurement cell total again. Click **Import these approved rows** again to proceed, or click **Go back** if you need to recheck. The system may ask for your password again. The system then creates the customers, wearers, measurements, employees and piece rates in one step. It cannot be undone.
6. After you check the imported records, clear the staged values.
- Look at the **Clear the staged values** section.
 - Click **Clear the staged values** and then **Clear them**. This wipes the names and rates in the staged rows. The imported records are not touched.

What the system does for you

It holds the uploaded rows in a staging area so you can review and fix them safely. The import check counts what would go in and checks that every row of the file is counted once, without importing anything. Nothing is deleted, and a row already imported from an earlier file is not created twice.

Common mistakes and how to fix them

- **Mistake:** You uploaded the wrong CSV file or chose the wrong kind of data.
- **Fix:** Do not import it. You can simply leave it and upload the right file.
- **Mistake:** The import check measurement total does not match the old sheet.
- **Fix:** Go back to the review. Find the row with the wrong measurement, use **Fix** to type the correct number, and check the import again.

Guide 39. Switch-over day

What it is for: Move from your old system (the Apps Script and VERSION 2) to the Moonproject on a single switch-over date agreed by all three owners.

Before you start:

- The three owners must agree on the date.
- The accountant has made their decisions.
- Test prints on the **Printer test pack** screen (on the **Admin** menu) are successful.
- You have passed a [restore](#) drill.
- Your recovery keys are stored safely (see [Backups](#)).
- You have practiced on the [Practice shop](#).

Steps

1. Freeze the old apps. Do not make new entries after closing time the day before.
2. Download each tab of the old Apps Script sheet as a CSV file. On the **Admin** menu, click **Import old data**. Upload one tab at a time: pick the file in **CSV file** and click **Load a copy**. Then go through the review (**Accept, Fix, Merge, Exclude**), click **Check the import**, and click **Import these approved rows**. The import step will ask for your password again.
3. Use the **Opening balances** screen (see [Opening balances](#)). Click **Set the cut-over date**, then record your starting balances (cash counts, bank balances, open job orders, bills, loans, and fixed assets). Finally, click **Close the opening** (the accountant signs off the opening trial balance here).
4. Re-create the job orders that are still in production as live job orders with their remaining steps.
5. Make the old apps read-only. Turn off the Apps Script web deployment and archive the VERSION 2 database.
6. Start making your first real entries in Moonproject.
7. Do your first [Cash counts](#) at the end of the day.

What the system does for you

It brings your old records into the new single ledger so you can continue seamlessly. For the first three days, monitor the system closely. If the trial balance or cash cannot be reconciled, or if a posting defect with money impact is found and not fixed within a day, stop using the new system and go back to paper.

Common mistakes and how to fix them

- **Mistake:** A money problem or incorrect amount is found after closing the opening.
- **Fix:** Do not delete or try to cancel. After **Close the opening**, no opening document is recorded, edited or cancelled. Later corrections are journal vouchers. If a major problem happens in the first three days, pause the new system, keep paper records, and have the accountant fix it with a journal voucher.

Guide 43. Home, Search and TV Board

What it is for: See your daily alerts on the home screen, find any record quickly using search, and display the production status on a large screen in the workroom.

Before you start: You will need to sign in to the system. Each person sees only what their role allows them to see.

Steps

1. **Home screen:** On the **Overview** menu, click **Home**.

On a phone, tap **Menu** first. The menu opens over the page and closes when you choose a screen. Tap **Close menu** or the shaded area to close it without moving.

2. **Search:** Click or tap the **Search customers, JOs, numbers...** box at the top of the screen and type what you are looking for.

Hello, Practice Owner

Last night's checks (2026-10-02) found some checks.

How the business is doing

October 2026

VATable sales ₱13,125.01	VAT ₱1,574.91	VAT ₱16,049.88
Collections ₱19,100.00	Gross payroll ₱0.00	Gross payroll ₱19,800.00

Today · 2026-10-03

Cash · Cash on hand (main cash box) ₱0.00	Cash · Petty cash fund ₱0.00	Cash · Checks on hand (undeposited customer checks) ₱0.00	Cash · Practice counter till ₱90,629.65
Cash · Cash in bank – BDO ₱0.00	Cash · Cash in bank – China Bank ₱0.00	Cash · Practice bank ₱75,000.00	Cash · E-wallet – GCash ₱0.00
Customers owe ₱4,000.00	Over 30 days ₱0.00	Over 60 days ₱0.00	Over 90 days ₱0.00

CUSTOMER

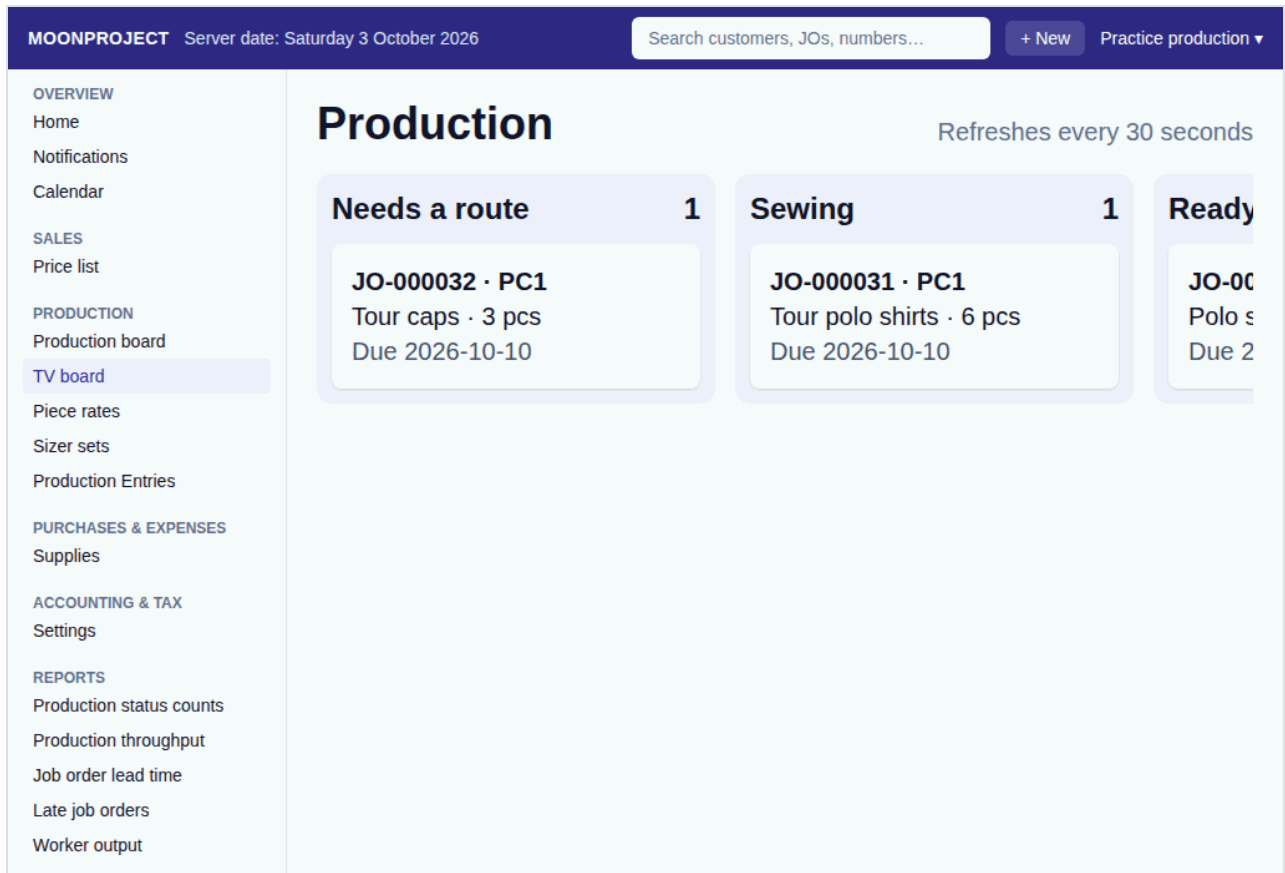

- Practice Customer 1
- Practice Customer 2

- Practice Wearer 2
- Practice Wearer 3

The search box at the top, listing what it found · Owner-guide screenshot

3. **TV board:** On the **Production** menu, click **TV board**.

The TV board · Owner-guide screenshot

What the system does for you

- **On the Home screen:** Start with **Needs attention**, a list of up to 8 work reminders and unread alerts already available to your role. Warnings, overdue work and due dates come before routine activity. Click a reminder to open its screen. You can click **Mark read** on an alert when you are done with it, or **See all notifications** to open the full **Notifications** screen (also on the **Overview** menu). **Daily actions** follows with up to four shortcuts for your role. Open **More role details** for the full lists, such as **My drafts**, **Exceptions inbox**, **Ready for release** or **Production queue**. Figures such as **Sales this month**, **Collections this month** and **Cash position**, and the owner's business figures and charts, come below the work and actions.
- **Creating another document:** Click **+ New** at the top. Documents are grouped like the left menu. Use **Search new documents** to find a document or group, then click its name. Scroll within the menu for more choices; every document you may create remains there. **No matching documents** means this menu search found nothing; clear the search to see all choices again.
- **When searching:** When you type 2 letters or more in the search box, it says **Searching...** while waiting. The newest search shows matches headed by the kind: **Customer**, **Wearer**, **Job order**, **Document**, and, if you may see them, **Supplier** and **Employee**. If nothing fits it says **No matches**. A connection failure says **Cannot search right now. Check the connection and try again**. Click **Retry search** after checking the connection. Click on a suggestion to go straight to that record.
- **On the TV board:** It displays a large **Production** board showing the same columns as the production board (**Choose production steps**, the steps, **Ready**). Each card shows the job order number, the customer's initials, the item, pieces, and "Due [date]". The screen automatically updates, saying **Refreshes every 30 seconds**, so you never need to reload it. It fills the browser window without the menu. **Page 1 of 2** (or the current page count) tells you where you are; extra pages turn by themselves

every 12 seconds, including cards lower down a busy column. **Updated** shows the last successful update time in Manila. **Not updated since** means the displayed cards may be old; the board keeps them visible and tries again. Before the first successful update it says **Not updated yet** if an update fails or takes too long. Urgent orders stand out with a red **RUSH** indicator and late orders say **OVERDUE**, based on the server date. An empty board says **No job order is in production**. To use another screen, use the browser Back button or go to the home address.

Common mistakes and how to fix them

- **Mistake:** You cannot find a document, see a specific notification on your home screen, or the search box is missing entirely.
- **Fix:** You might not have permission for that part of the system, including permission to search. The owner must go to Users or Roles and permissions to give you access.

Guide 19. Calendar and Audit Log

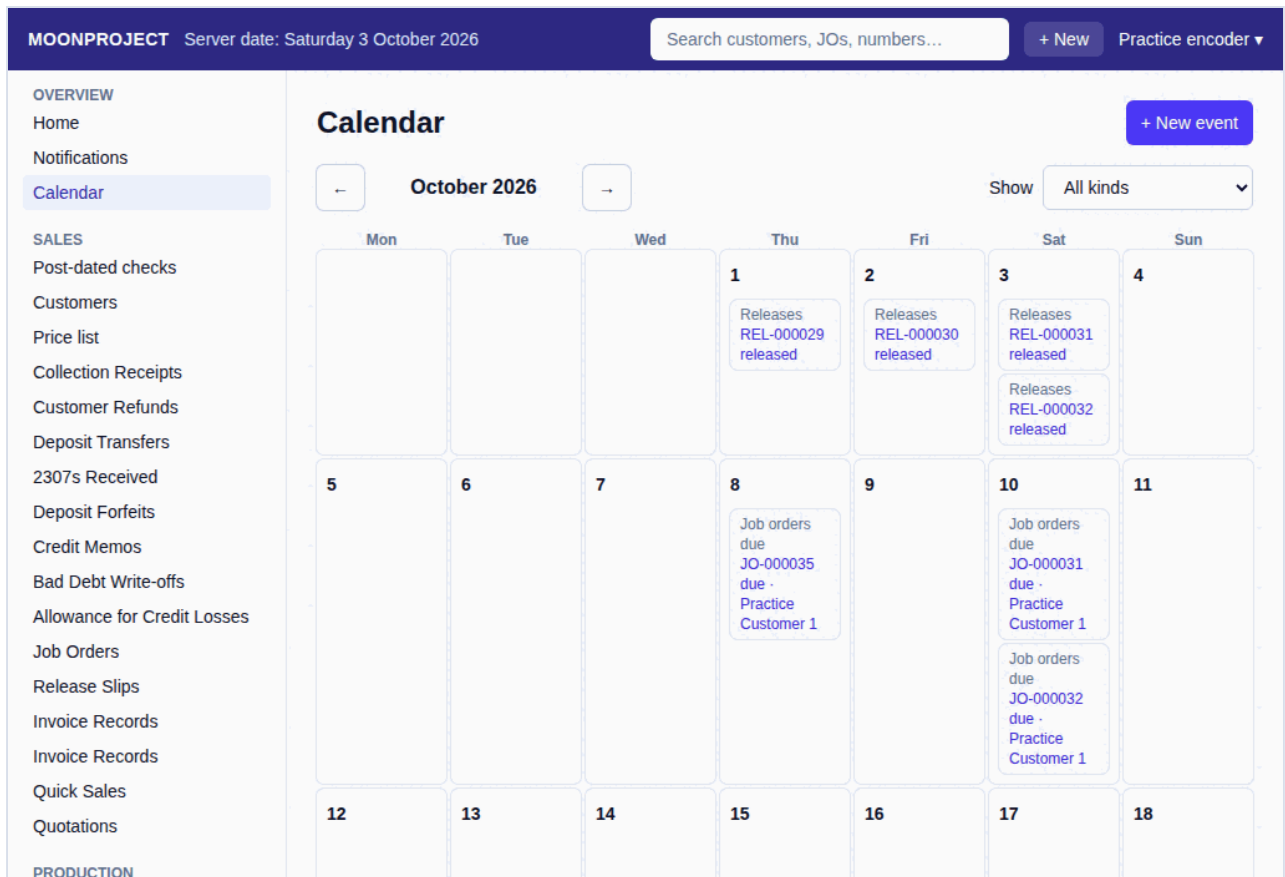

What it is for: View upcoming events, deadlines, and birthdays on the calendar, track every change made in the system using the audit log, and check the system's data integrity.

Before you start: Be sure you know the details for any events you plan to add to the calendar.

Steps

Calendar

1. On the **Overview** menu, click **Calendar**.

The calendar for the month · Owner-guide screenshot

2. The calendar shows different kinds of events like Booked events, Job orders due, Releases, Holidays, Tax deadlines, Customer birthdays, and Employee birthdays.
3. You can use the **Show** drop-down to filter the calendar (for example, pick "Booked events" or "All kinds").
4. To book a fitting or another booking, click **+ New event**.
5. Type a **Title** and select a **Date** and **Time (optional)**.
6. You can also pick a **Find customer (optional)** and a **Job order (optional)**, and type **Notes (optional)** if needed.
7. Click **Save event**.

- To change an event, click **Manage** on the event in the calendar.
- To move the event, pick a new **Move to date** and **Time**, then click **Move**.
- To cancel an event, type a **Cancellation reason** (at least 10 characters) and click **Cancel event**.

Audit Log

- To see who changed what, go to the **Admin** menu and click **Audit log**.

The audit log with its filters · Owner-guide screenshot

- Under **Filters**, you can type or select a **From** date, **To** date, **User**, **Action**, **Entity type**, and **Entity ID**.
- Click **Show** to view the matching entries.
- If you want a spreadsheet of the log, click **Download CSV**.
- Every download of the CSV is itself recorded as an action in the audit log.

Integrity Check

- To run a check on your data, go to the **Admin** menu and click **Integrity check**.
- The system will start checking automatically. You can click **Check again** to re-run it.
- Under **Audit chain** and **Checks**, a green line means that part of the system is safe and correct.
- A red line means there is a problem with the data.
- If you see a red line, stop and call your accountant.

What the system does for you

The system keeps everything organized. The calendar reminds you of important dates. The audit log saves a secure record of every action. The integrity check runs when you open the page or click **Check again** to make sure no records have been tampered with or corrupted.

Common mistakes and how to fix them

- **Mistake:** You clicked on an event on the calendar to fix a typo in the title or notes, but there is no save button.
- **Fix:** You cannot change the title or notes of an event once saved. To fix a mistake, just cancel and redo it. Open the event, type a **Cancellation reason** (at least 10 characters), and click **Cancel event**. Then click **+ New event** to create a new one with the correct details.

Troubleshooting

What to do first in an emergency

1. Stop recording if the database, books or audit trail is red, a restore is being considered, or amounts cannot be explained. Tell staff to keep dated paper records for later checking.
2. Keep the latest backups, offline copies and recovery keys safe. Do not overwrite or discard them while trying fixes.
3. The owner opens **Admin > System health** and clicks **Download support file** (guide 25).
4. Tell the owner and accountant what happened, which document numbers were involved, the time and exact message. Give the support file to the person who maintains the shop PC. It contains health information without shop names, amounts or file paths.
5. Resume only after the owner and accountant agree what is correct and how any paper work will be entered once.

Cannot open the page

Check that the shop PC is on and the device is on the shop network or the approved VPN. Open the saved address. If the address changed, get the new one from the owner. Start the join page as in guide 10. A browser's connection error is not proof that a record failed: after reconnecting, search for the document before trying to record again. Call the owner or PC support if all devices fail.

Certificate warning

If the browser says the connection is not private, follow guide 10. Check the code against the shop PC, install **Moonproject local CA**, and on iPhone or iPad turn on its trust switch. If the codes differ, stop and tell the owner. Do not ignore the mismatch.

Forgot password or wrong password

"Wrong username or password.": check the username and typing. Ask the owner to use **Users > Reset password** (guide 35), then sign in with the new temporary password and change it. If the owner cannot sign in, contact another authorized owner or PC support; do not create a second shop or reinstall to clear a password.

Signed out

"You are signed out.": sign in again. Password changes, a password reset or deactivation can end a session. Ask the owner if your login no longer works. Reopen the document list and check whether the last entry was recorded before repeating it. Saved drafts can be reopened; text that was never saved may need typing again.

Button greyed out, hidden or Access denied

“Access denied.”: ask the owner to check **Roles and permissions**. A hidden button often means the role lacks permission. A disabled button often means required information or a prerequisite is missing:

- **Show** on reports needs valid dates; a customer statement also needs a customer (guides 38, 50 and 54).
- **Finish** in bank reconciliation needs saved ticks, matched statement lines and zero **Difference (must be zero to finish)**. Read “To finish:” (guide 32).
- An agency download needs employees and complete IDs. “The SSS file for ... was not made: no SSS number for...” means correct employee IDs; a missing employer number is entered on that month page (guide 34).
- **Make a job order** needs a real customer, not just a prospect (guide 40).
- **Record new answer** needs the required decision fields (guide 48).
- **Add a file** needs permission to create that kind of document (guide 58).
- **Forgive the rest** appears only for the first unsettled instalment with something due. A later instalment cannot skip an earlier one (guide 36).

Ask the accountant for business prerequisites and the owner for access. Do not borrow another person's login.

Duplicate

For a supplier invoice, open the record named in the refusal and compare the paper. Do not type a different number to hide a duplicate. A permitted exception uses **Reason to go ahead anyway**, 10 to 200 characters, after the accountant checks it (guide 13). For a booklet number already used, inspect the existing record and booklet; never reuse a cancelled invoice. For an inventory count already recorded for that category and day, open and correct the existing count (guide 15).

Signed-off month

“... is already signed off at month-end, so nothing new is dated ... Check the date printed on the document, or ask the accountant.”: compare the paper date, then stop and ask the accountant. Do not replace it with today's date just to pass the check. A sign-off is not undone. **Changed after sign-off** means the accountant must examine listed changes and **Sign off again** as appropriate (guide 33); that is not permission to falsify a printed date.

Date refused

“Type the date printed on the document like 2026-09-30, or leave it empty for today.”: enter a real calendar day. “The date printed on the document cannot be after today (...):” compare the paper with the server date. If the shop PC clock is wrong, tell the owner or PC support. If the date is correct but the month is signed off, ask the accountant. See guides 3, 4 and 13.

Printer window blocked or print cut off

“Allow pop-ups for this site, then try Print again.”: allow pop-ups for the saved shop address and try again. “An owner must complete the company profile before printing.”: the owner follows guide 44. Check the selected printer, paper size and page preview. Run **Printer test pack** and leave **Printed well** unticked for a bad sample. Call PC support for printer problems and the owner for company details (guides 44 and 50).

Backup light amber or red

Open **System health** and read the light's message. **Open Backups** leads to the fix: check **Status > Last runs**, recovery keys, folders, off-site syncing and USB rotation. After fixing the cause use **Back up now**. With no recovery keys, backups are off. Keep old keys while their backups are kept. “Backups and restores are not part of the practice shop.” means open the real shop. The owner handles this; call PC support for failed drives or copies (guides 11 and 25).

Restore will not open or numbers are reused

Recheck the recovery key from its saved copy; spaces and small letters do not matter. Try the other key for that backup. **Back to the list** stops before confirmation. If the 30-minute restore window expires, open the backup again. Review **Last number now**, **Last in the backup** and **Issued again** with the accountant. Set aside affected old copies. Call the owner and PC support; a real restore is not a routine fix or a drill (guide 12).

Numbers do not match

Use the same period, **As of** date and filters on both reports. Check whether a number is a booklet serial or an internal document number. Open source document links and check cancellations, reissues, deposits and entries after filing. “Closing cash does not equal the cash accounts on the balance sheet. Tell the accountant.” means do exactly that (guide 49). If books or audit checks are red, use the emergency steps. Never delete or make a balancing entry without the accountant's explanation.

Cash count differs

Recount bills and coins. Check quantities and denominations, then compare **Cash book** for the same cash place. Look for a payment put in GCash instead of cash, a missing transfer or an unrecorded expense. Have the accountant check the difference before recording the count; it can adjust the books. If already recorded wrongly, cancel and redo with a reason (guides 7 and 8).

Nightly check found something

A red cross with “found”, or “Last night's checks (...) found ... to look at”, means open the finding or **Open the report**. Use **Run the checks now** after resolving the cause. “No nightly check has run yet. The first one runs at the next 2:00 AM.” means it has no result yet. Tell the accountant about money or document findings, and PC support about backup, database or clock findings (guide 56).

Shop PC off, slow or board not updating

Turn on the shop PC and check its power and network. **Not updated since** means production cards may be old; **Not updated yet** means the first update did not finish. Recheck the connection before relying on the board. The owner checks **System health**, especially **Disk space**, **Clock** and backups. Do not repeatedly click **Record** or switch off the PC while it is recording or restoring. Call PC support if several devices are slow (guides 25, 41 and 43).

Glossary

Plain words

- **2307:** certificate of tax withheld. A customer gives one for tax withheld from the shop; the shop issues one when withholding from a supplier.
- **2316:** the employee's compensation and tax-withheld certificate data for the year.
- **2550Q:** quarterly VAT return. **1601-EQ:** quarterly expanded withholding tax return. **0619-E:** monthly EWT remittance for the first two months of a quarter. **1601-C:** compensation withholding return.
- **ATC:** Alphanumeric Tax Code. It tells the BIR what kind of payment or withholding is being reported.
- **EWT:** expanded withholding tax deducted from a supplier's payment. **CWT:** creditable withholding tax, such as tax a customer withheld that the shop may claim with the supporting certificate.
- **Input VAT:** VAT on qualifying purchases. **Output VAT:** VAT on sales. VAT included means the stated price already includes it.
- **Accrual:** record an amount earned or owed in its proper period before cash is received or paid. **Reversal:** an opposite entry that undoes an earlier entry's effect.
- **Write-off:** remove a balance that will not be collected, with the required reason and accounting treatment. It does not erase the old document.
- **Forfeit:** keep an abandoned order's deposit under the agreed rules. It is different from a customer payment or refund.
- **Allowance:** may mean a price reduction on a credit memo, an estimate for credit losses, or an addition to pay. Check the screen's meaning.
- **SIL:** service incentive leave. The leave balance shows earned, used, paid in cash and left.
- **Sizer set:** sample sizes lent to a customer for fitting, then returned and checked.
- **JO:** job order. **CR:** collection receipt. **PO:** purchase order. **JV:** journal voucher.
- **Receivable / AR:** money customers owe the shop. **Payable / AP:** money the shop owes suppliers or others.
- **Deposit / downpayment:** money held against a customer's order before the sale is invoiced under the chosen rules. It is not automatically sales income.
- **Principal:** the borrowed amount still owed. **Interest:** the borrowing charge. **Forgiveness:** the lender agrees not to collect the remaining amount; never assumed from a short payment.
- **Fixed asset:** equipment or another lasting business asset. **Depreciation:** charge its cost over its useful life. **Book value:** cost less accumulated depreciation.
- **Reconciliation:** explain and match two sets of records, such as bank statement and cash book.
- **Cut-over date:** the date used for the opening balances when moving from the old books. **Sign-off:** the recorded review of a month; printed-date entries cannot newly use that month.
- **Draft:** saved unfinished work with no document number or posting. **Posted / recorded:** saved as a numbered event in the system. **Ledger:** the accounting entries behind balances.

- **Cash place:** a cash box, bank account, checks account or e-wallet. **Split payment:** one payment divided among cash places.
- **Pakyawan:** per-piece pay. **Bale:** cash advance. **Pasubra / rework:** work done to fix or redo pieces.
- **SLSP:** summary lists of sales and purchases. **SAWT:** summary alphalist of withholding taxes. **ATP:** authority to print the paper forms.
- **CSV:** a table file that a spreadsheet program can open. **PDF:** a fixed-layout document for reading or printing. **Support file:** the app's health information for the person helping with the PC.
- **Restore drill:** test opening a backup without replacing the live books. **Restore:** replace live data with an earlier backup; later work is lost and later numbers can be issued again.

What to write on the booklet

Keep this page beside the invoice booklet

1. Open the correct release's invoice record, downpayment invoice form, quick sale, or asset sale. Check the customer or buyer and the goods being invoiced.
2. Use the correct registered physical booklet and its next usable serial number. An internal JO, REL or INV-REC number is not the paper invoice number.
3. Under **Write these on the booklet**, copy **VATable sales**, **VAT** and **Total** exactly. Do not work out a second VAT figure yourself. Follow the accountant's rules for the customer's details and any other required particulars on the paper form.
4. Type **Invoice number (from the booklet)** exactly as written. On the separate invoice-record form, fill **Date on the invoice** with the paper's printed date. A blank date means today, not "unknown".
5. Click **Record**, read the confirmation, then confirm with **Record**. Keep the paper and system record together for checking.
6. For collections, enter the CR booklet number when asked and **Date on the CR** on the collection form. Record the actual cash places and any 2307 tax separately. A deposit is not the same thing as a final sale.
7. If the booklet is unavailable at release, use **Invoice to follow (the booklet is not at hand)** and follow up through **Invoice Records**. Do not invent a number.
8. If wrong, stop and ask the accountant about the paper correction. In the app cancel and reissue as allowed. Mark the old paper "cancelled (all copies kept)". Never reuse its number.

The app's quotation, job order, release slip or statement is not your BIR booklet invoice. The legend **THIS DOCUMENT IS NOT VALID FOR CLAIM OF INPUT TAX.** does not replace the paper invoice.

See guides 3 and 37 for releases and invoice records, 4 for collections, 5 for quick sales, 46 for asset sales, and 44 for print details. A future, impossible or signed-off-month printed date is refused; ask the accountant instead of changing the true date.
